

Dr. Dogan Paktunc is a research scientist at the Mining and Mineral Sciences Laboratories of CANMET and adjunct professor at the Department of Earth Sciences, University of Ottawa. He possesses over 26 years of experience in earth, environmental and metallurgical sciences with research interests on the development of mineralogical and material characterization techniques, tools and practical methodologies, characterization of ores, concentrates, tailings and other waste materials, and bringing practical solutions to industry problems. More specifically, his research interests are focused on speciation and molecular-scale characterization of mine wastes and impacted soil, stabilization of arsenic in mine wastes, characterization of nanoparticles and complex materials and mineralogical aspects of acid mine drainage.
