

SUMMARY REPORT FOR:

PELLY RIVER AQUATIC ECOSYSTEM

MONITORING PLAN, MAY 2012

For

Submitted by

July 2012

1.0 BACKGROUND

In late April of 2012, a request was made of Laberge Environmental Services (LES) to provide a proposal to Assessment and Abandoned Mines (AAM) to conduct the Pelly River Aquatics Water Monitoring Program at the Faro Mine Complex (FMC) for the month of May.

The provided lists indicate that 22 sites are to be sampled in May 2012 for a suite of analytical and in-situ parameters. Specifically the parameters are as follows:

In-situ

- pH
- conductivity
- temperature

Analytical

- alkalinity
- chloride
- ammonia
- nitrate
- dissolved and total organic carbon
- conductivity
- pH
- sulphate
- total suspended solids
- total dissolved solids
- turbidity
- hardness
- low level total and dissolved metals (30 element suite)

LES signed a contract on May 1st, 2012 to complete the receiving water monitoring program for May.

2.0 STUDY AREA

The study area encompasses reference sites, impacted sites, and receiving water sites and has generally been divided into three main areas: the Vangorda watershed, the Faro mine site and Rose and Anvil watersheds, and the Pelly River. The table below lists the sites, including

PELLY RIVER ECOSYSTEM MONITORING, MAY 2012

descriptions, that are to be sampled in May 2012. The sites are listed by area from upstream to downstream in all of the tables of this report, to aid in interpretation of the data.

TABLE 1 LIST OF SITES AND DESCRIPTIONS		
Vangorda Watershed	VR	West Fork of Vangorda upstream of Haul Road.
	V17A	AEX Cr upstream of Haul Road
	VW3	West Fork of Vangorda downstream of AEX Creek
	VW1	West Fork of Vangorda downstream of landslide but u/s of VW2
	VW2	Tributary to West Vangorda Cr which drains Grum west lobe, upstream of Mine Access Road
	V20A	Dixon Cr upstream of mine workings, tributary to Vangorda Cr.
	VGM1N	Vangorda Cr downstream of mine but upstream of West Vangorda Creek.
Faro Sites and Rose & Anvil Watersheds	V8	Vangorda Cr downstream all inputs but u/s Pelly River.
	USFR	South Fork Rose Creek upstream Haul Road
	GCULV	South Fork Rose Creek downstream Haul Road and u/s Mine Access Road
	K8	Reservoir Creek upstream Mine Access Road
	R1	Rose Creek upstream pumphouse pond and tailings system
	FC	Faro Cr upstream diversion
	W10	Upper Guardhouse Creek upstream NW Dump
	NWID	Northwest interceptor ditch upstream of diversion point
	X14	Rose Creek downstream of all mining inputs
	R4	Rose Creek upstream confluence with Anvil Creek
	R6	Anvil Creek upstream confluence with Rose Creek
Pelly	R5	Anvil Cr downstream of Rose Cr after full mixing.
	A1	Anvil Creek near confluence with Pelly River
Pelly	P1	Pelly River upstream Vangorda Cr
	P4	Pelly River downstream Anvil Creek

The only site where samples were not collected in May was R5, Anvil Creek downstream of the confluence with Rose Creek. Due to high water levels all potential gravel bars in this area were flooded. No suitable landing location was available within a reasonable distance downstream of the confluence. Sampling further downstream would be unrepresentative of the water quality of R5 due to the input from other tributaries.

3.0 METHODS

Surface water quality sampling followed AAM's water sampling protocols, a copy of which was provided to LES. Maxxam Analytics Ltd supplied LES with the necessary sample kits prior to the field trip of May 28th to 31st, 2012. Each sample bottle was rinsed three times with the sample waters and then filled and preserved as specified by the laboratory's protocols. Samples that required filtering (dissolved organic carbon and dissolved metals), were filtered in the field prior to preservation. Samples were kept cool then shipped as soon as possible to the Maxxam laboratory in Burnaby, BC.

In-situ measurements of water temperature, conductivity and pH were taken at each site. Photographs were also taken to document the current conditions at each location.

As measures of quality assurance and quality control (QA/QC), two blind duplicates were collected during the survey. In addition, one field blank was submitted as well as the travel blank provided in the sampling kit by the lab. The lab also ran their own QA/QC and their report is included with their analytical report (see Appendix C).

Six of the sampling sites are remote and can be accessed by helicopter only. AAM provided Trans North with a separate contract to conduct the aerial portion of the program.

4.0 RESULTS

Water levels were high throughout the study area and were nearing freshet, consequently several of the flows were quite turbid. Many creeks had bank to bank flow.

4.1 Photographs

Photographs of each site can be found in Appendix A.

4.2 In-Situ Results

The in-situ data is presented in Table 2, Appendix B. The table also includes a comment section where the locations of the collection of the duplicate samples are indicated and any observations are recorded.

4.3 Analytical Data

Anions, Nutrients and Physical Data

Table 3 in Appendix B, presents the compiled anion, nutrient and physical attributes of the samples collected in the study area.

Total and Dissolved Metals

The dissolved metals data is presented in Table 4, and the total metals data is included in Table 5, both in Appendix B.

5.0 DISCUSSION AND RECOMMENDATIONS

It is beyond our scope of work to provide any discussion or interpretation of the results for the May 2012 water quality collected under this monitoring program. This letter report includes all the specified deliverables in the provided scope of work.

However, it is recommended that the helicopter landing areas on Rose and Anvil Creeks are brushed out prior to the next sampling trip. With the advent of summer, the growth of the willow bushes at these sites may prevent the safe setting down of the helicopter. This is a safety and maintenance issue and if the sites R4, R5 and R6 are to remain in a long term monitoring program, the landing sites should be maintained on a regular basis. The last time these sites were brushed out was in July 2004, under the care and maintenance contract of Deloitte and Touche.

EDL = Estimated Detection Limit

(1) Dissolved greater than total. Reanalysis yields similar results

(2) Duplicate RPD above control limit - (10% of analytes failure allowed).

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix to which a known amount of the analyte has been added. Used to evaluate analyte recovery.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was not sufficiently significant to permit a reliable recovery calculation.

NC (RPD): The RPD was not calculated. The level of analyte detected in the parent sample and its duplicate was not sufficiently significant to permit a reliable calculation.

(1) Sample analysed past recommended hold time.

(2) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

(3) Matrix spike exceeds acceptance limits due to matrix interference. Re-analysis yields similar results.
