PROJECT # AND NAME: Clinton Creek. 16-240.3. Water Program

Date and Time (24hr) AUG 20 2016 Field Staff GR + NB
 Site ID E1(H) Prop # 1 Type of meter used SWOFFER
 Station UTMs 0512850 7147423 Datum NAD 83
 Left Bank (m)' 13.18 Calibration No. 605
 Right Bank (m)' 0.78 Start Time (24 hr) 1042
 Wetted Width (m) 12.40 End Time (24 hr) 1123
 Staff Gauge (start) 0.851 m Staff Gauge (end) 0.851
 Field Photo # 7182-7187

Method Summary
 Measure the width of the wetted cross section of the stream (m)
 Divide the wetted width by 20 to establish the width of each flow gauging panel
 If the width of each panel is less than 6 cm you can reduce the number of panels (and increase the width of each panel)
 If the stream is less than 0.75 m deep take the average flow readings at 60% of the depth only
 If the stream is more than 0.75 m deep (at least one location) then take readings at 80% and 20% depths only

Crossing No. 1	Distance (m)	Depth (cm)	Velocity (m/s) @ 60% depth ²	Velocity (m/s) @ 80% depth ² (2 x depth)	Velocity (m/s) @ 20% depth ² (0.5 x depth)	Comments

Method Summary

Measure the width of the wetted cross section of the stream (m)

Divide the wetted width by 20 to establish the width of each flow gauging panel

If the width of each panel is less than 6 cm you can reduce the number of panels (and increase the width of each panel)

If the stream is less than 0.75 m deep take the average flow readings at 60% of the depth only

If the stream is more than 0.75 m deep (at least one location) then take readings at 80% and 20% depths only

Notes:

Left bank and right bank are always based on looking downstream.

¹ Use the width on the tape. No need to start at 0 m. Calculations will be completed in Excel.

² Depth is measured from the water surface down (top to bottom, not bottom to top)

Calculations (e.g., wetted width / 20 = panel width):

1 / 20 = 0.05

1 / 12 = 0.083 m

Hydrology Field Sheet

PROJECT # AND NAME: Clinton Creek. 16-240.4. Water Program

Date and Time (24hr) Aug 20, 2016
 Site ID R9 Prop # _____
 Station UTM's 0512344 / 7146751
 Left Bank (m) 3.04
 Right Bank (m) 1.76
 Wetted Width (m) 1.28
 Staff Gauge (start) N/A
 Field Photo # 6442 / 7177-7181

Field Staff GR/NE
 Type of meter Used SWOFFER
 Datum NAD 83
 Calibration No. 605
 Start Time (24 hr) 9.02
 End Time (24 hr) 9.26
 Staff Gauge (end) N/A

Method Summary
 Measure the width of the wetted cross section of the stream (m)
 Divide the wetted width by 20 to establish the width of each flow gauging panel
 If the width of each panel is less than 6 cm you can reduce the number of panels (and increase the width of each panel)
 If the stream is less than 0.75 m deep take the average flow readings at 60% of the depth only
 If the stream is more than 0.75 m deep (at least one location) then take readings at 80% and 20% depths only
