

GEOLOGICAL SURVEY OF CANADA
DEPARTMENT OF ENERGY, MINES AND RESOURCES

Legend

	Shale		Sharpclast-siltstone
	Siltstone-mudstone, shale		Diamictite
	Sandstone, Siltstone		Conglomerate
	Siltstone, Argillite		Limestone
	Iron Formation		Dolomite

Note: In particular the abrupt facies change from conglomerate to siltstone in the Redstone River Formation, and the subtle colour variation from maroon to green in the Sayunei Formation.

To accompany Paper 77-35 by G.H. Eisbacher

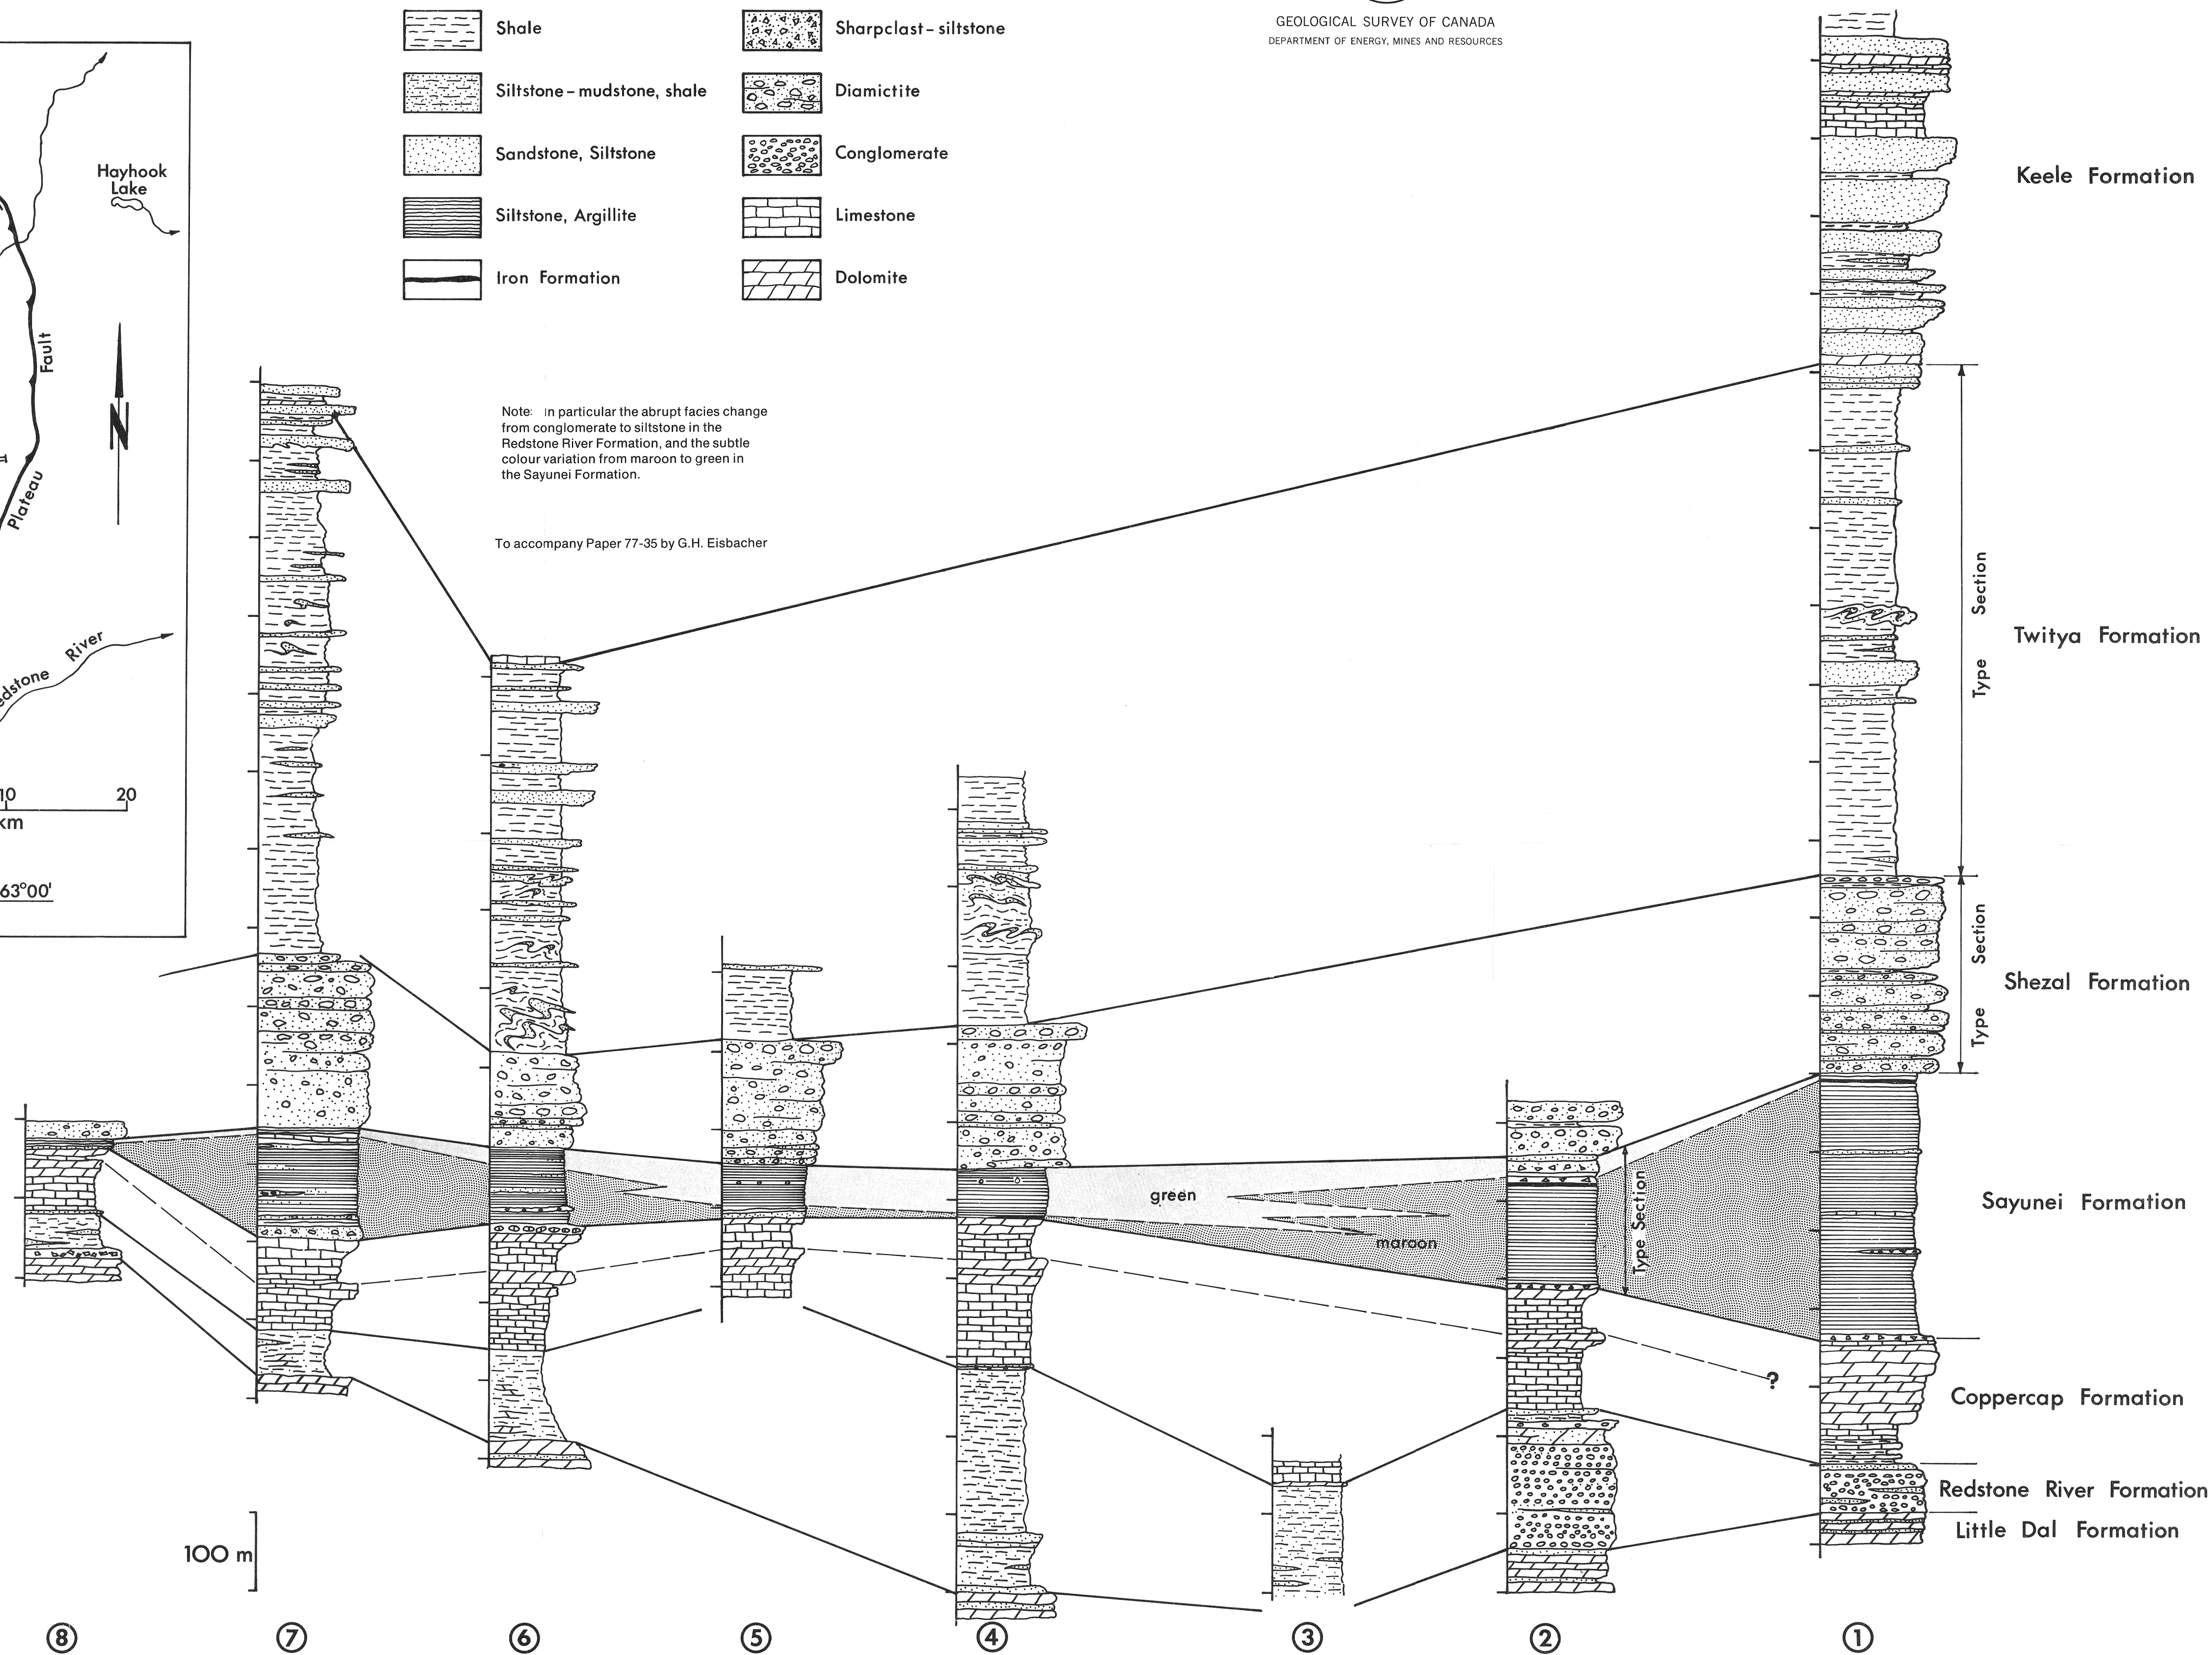

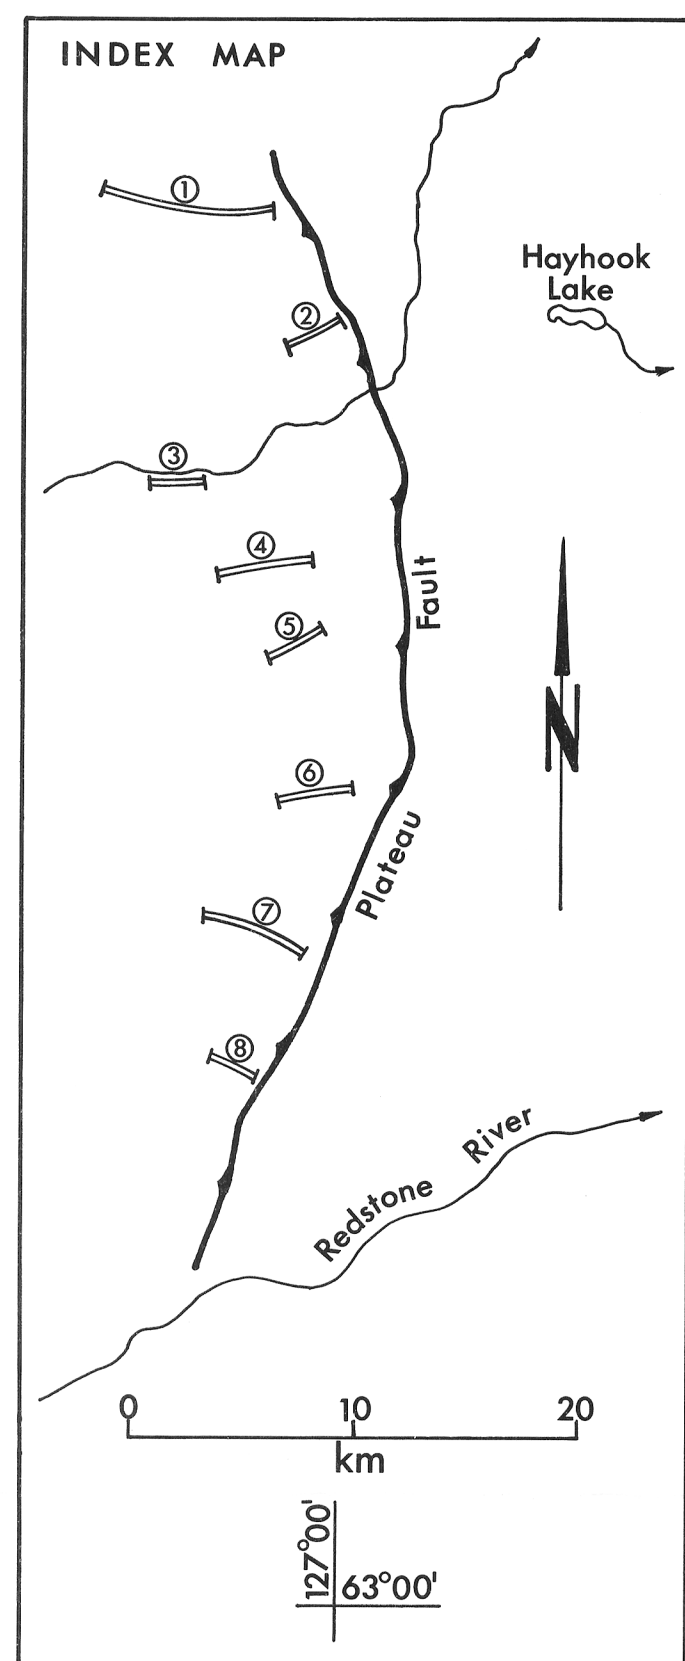

Figure 10 Measured stratigraphic sections through Redstone River, Coppercap, Sayunei, Shezal, Twitya, and Keele formations in the Hayhook Lake area, Mackenzie Mountains.
