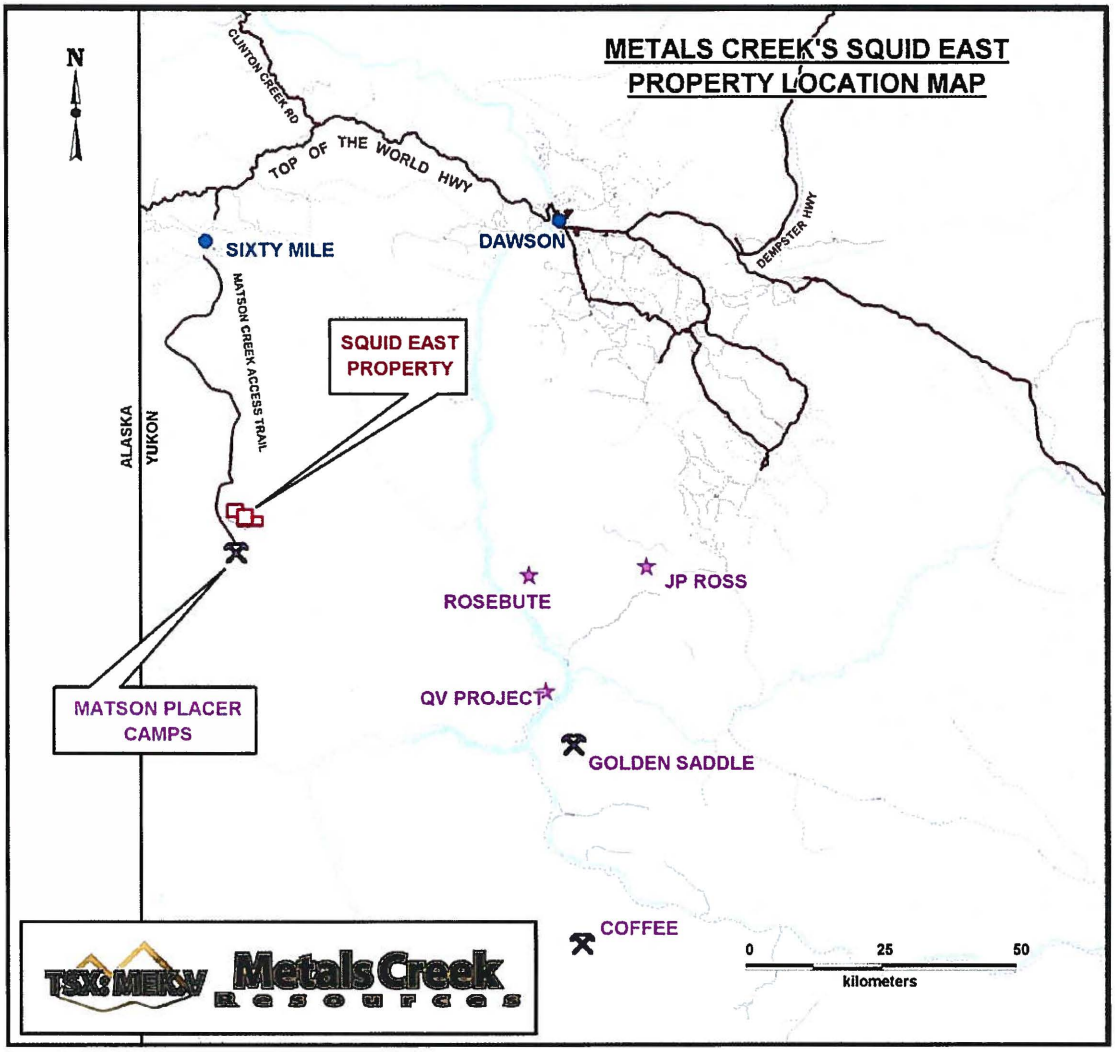
1.0 INTRODUCTION

In July/August 2013 a program of soil sampling and limited mechanical trenching/ sampling was completed on the Squid East claims in western Yukon. The program was undertaken to focus on better delineating Au-in-soil anomalies that were outlined by previous soil sampling in 2011 and 2012. The property is located 80km south-west of Dawson City, Yukon and is 100% owned by Metals Creek Resources (MEK). The original 36 claims were staked in March 2011 will additional staking of 46 claims in September 2012 for a total of 82 units.

The program was, in part, supported by a grant from the Yukon Mining Incentive Program (YMIP) and commenced June 25th, ending July 6th using a two to seven man crew. The property was accessed via quad on a trail that was established with a D10 dozer at the commencement of the program. Five mechanical trenches were attempted over two soil anomalies (E4 and E5) with moderate success due to permafrost. Soil samples were taken at 25m spacings on detailed-lines laid out at a nominal 100m separation and recce-soils were collected at 50m spacings. Samples were collected using a one-piece 'Edelman type' soil auger and packaged individually in labeled craft soil bags. A total of 412 soils, and 260 rock samples were collected and delivered to Acme Laboratories in Whitehorse for sample preparation before being delivered to Vancouver for analysis.

Results from the 2013 program are outlined in this report, in particular the trenching results that helped in identifying the host rock to gold mineralization as well as possible orientations and dimensions of the gold bearing zone.



1.1 Location and Access

MEK owns a 100% interest in the Squid East claims situated in the Dawson Range, west central Yukon. The claims are located 80 km southwest of Dawson City and within 10 to 15 km of the Alaska border. The project is centered on UTM coordinates 518,650E/7,050,000N (NAD83 Zone 7) on NTS 115N/10. The seasonal Matson Creek Placer operation is located approximately seven km south of the claim block.

Access had been via helicopter from Dawson City however road access to the Squid East claim block was made possible by establishing a trail from an existing access road to the Matson Creek Placer operations. The Matson Creek access road originates in the Sixty Mile Creek area which is accessible from the "Top of the World Hwy". The condition of the road has not been evaluated but it has been referred to as a four–wheel drive road. A D10 Caterpillar bulldozer was utilized to push a 7.5km trail along a ridge top to the property between Borden and Christmas Creeks. There is also a gravel airstrip within 9 km of the property. Future work including drilling, if warranted, would take advantage of the road access and airstrip.

1.2 Topography and Vegetation

The property sits within a relatively shallow valley with variable vegetation of dense alder, birch and spruce forest to the south, lumpy grass/moss and black spruce in the center (around creek) and mixed birch, poplar and spruce in the northern third of the block. Borden Creek cuts through the claim block. Patchy permafrost is present on a steep north facing slope on the south side of Borden Creek, as well as in the mossy/grassy low lands surrounding Borden Creek. Elevations vary from 715 to 962m.

In general, the vegetation is more deciduous and denser on south and east facing slopes. Moss, Labrador tea and stunted black spruce dominate the north and west slopes of the area.

1.3 Claim Status

Metals Creek Resources owns 82 claims in the Dawson Range of west-central Yukon called the Squid East property. Squid East claims (NTS sheet 115N10) are detailed below in Table 1.

Table 1 List of Claims

GrantNumber	Type	ClaimName	ClaimExpiryDate
YE26991 - YE27000	Quartz	SQUID EAST 1 - 10	3/30/2016
YE27001 - YE27006	Quartz	SQUID EAST 11 - 16	3/30/2017
YE27007 - YE27012	Quartz	SQUID EAST 17 - 22	3/30/2016
YE27013 - YE27020	Quartz	SQUID EAST 23 - 30	3/30/2017
YE27021 - YE27026	Quartz	SQUID EAST 31 - 36	3/30/2016
YE45063 - YE45108	Quartz	SQUID EAST 37 - 82	9/13/2013

2.0 HISTORIC WORK IN THE AREA

This portion of the Dawson Range has been covered with regional geology (Ryan and Gordey, 2004), silt sampling (YTG compilation) and airborne geophysics surveys (GSC).

Previous hard rock exploration work is quite limited on the Squid claims. The only recorded private company work consisted of grid work (soil sampling, geophysics) and diamond drilling on a historic base metal showing (Bored Showing) located 9 kilometers southwest of the Squid East block. The showing is described as "gossanous pyrite/base metal mineralization hosted within quartz-muscovite-sericite schist of the Klondike Schist Group and is thought to have a VMS/Kuroko affinity. Five holes were completed in 1992 with a best intersection of 1.1% Pb, 0.08% Zn, 0.09% Cu, 2.7 g/t Ag and 23 ppb Au over 4.1 meters. A number of Mineral Prospects from Yukon Minfile, 2004 are located in the region however there is no published historic work available and research continues on these.

Placer operations exist on Matson Creek and North Ladue River in close proximity to the Squid Property. These deposits are located down-stream from the Squid claims and

previous production is in the order of 10,000 to 30,000 oz with grades reported up to 0.1 oz/cubic yard

Below is a breakdown of the historic work taken from accessible assessment files:

Squid West-
1977-1978: had mapping, geophysical and geochemical surveys conducted to the southwest and on the southern boundary of the present claim block by a joint venture between American Copper, Nickel Company Inc and Kennecott Copper Corp. Base metal anomalies were generated
1979: additional geochemical surveying conducted to the immediately west of the 77-78' surveying by Ocean Home Exploration Co Ltd.
1990: YGC staked and conducted soils to confirm the anomalies generated by the 70's surveying
1991: YGC carried out detailed geochemical surveying immediately west of the 79' geochemical surveying
1992: YGC conducted road building, line-cutting, geochemical sampling, mapping, prospecting, a Max-Min 1-9 HLEM survey and diamond drilling.
Five holes were drilled totaling 796m, resulting in weakly anomalous base metals values.
2011: MEK ridge and spur soil sampling generated 3 anomalies for 2012 follow-up
Presently: placer operations exist west and southeast of the current claims on Ladue River and Matson Creek respectively.
2012: MEK conducted some detailed soils in areas of single sample soil anomalies with no success in upgrading the anomalies.

Squid East-
Santa showing (MINFILE 115N027) is located 3.5km to the south of this block. The showing is polymetallic Ag-Pb-Zn+/-Au veins in Klondike Schist.
2011: MEK recce-soils generated 2 anomalies for 2012 follow-up
2012: MEK conducted detailed soils as follow-up to 2011 soils outlining a well defined Au-in-soil anomaly E4 and an As-in-soil anomaly E5 with associated pathfinder elements
No historic assessment work was found for this area.

3.0 Regional Geology

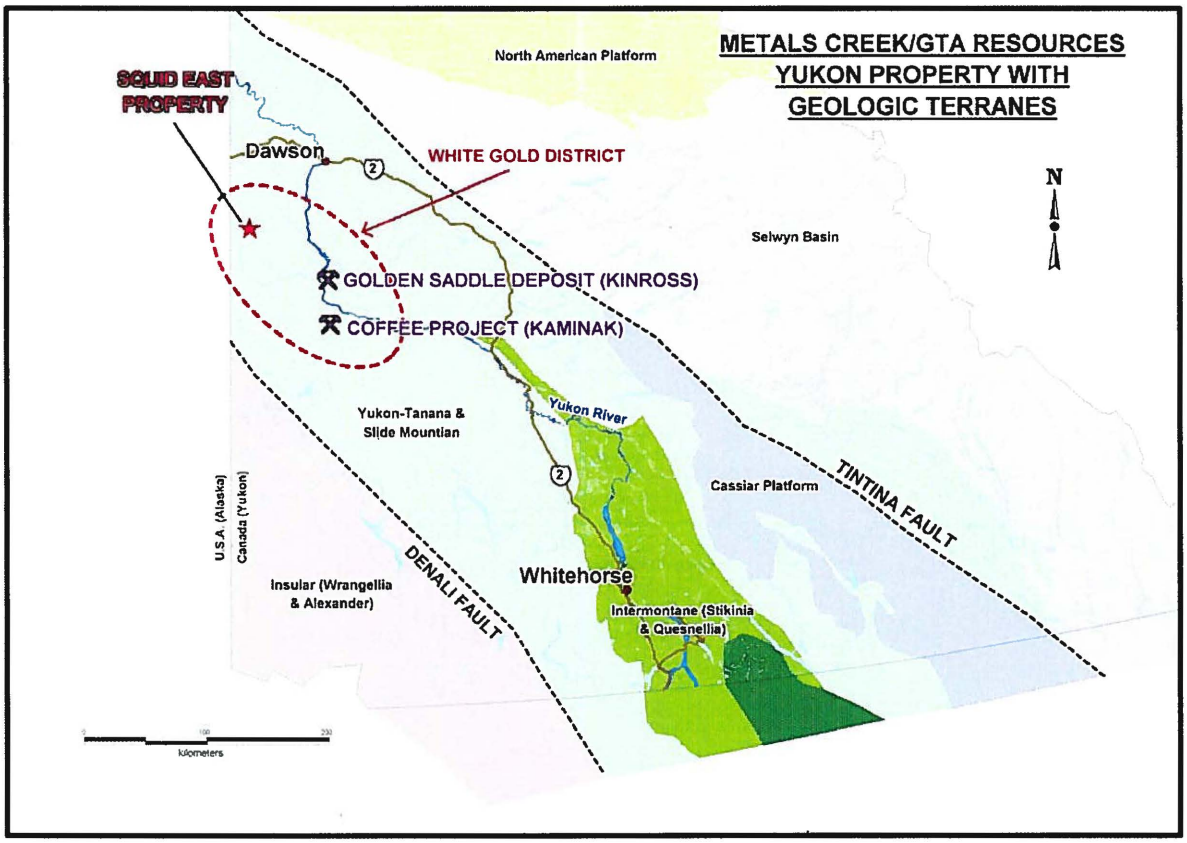
The geology description and lithological codes are interpreted from Open File 4970, Stewart River map sheet 115N-O, mapped and compiled by Gordey and Ryan, 2004.

The MEK claims are located in the Dawson Range, a non-glaciated region within the Tintina Gold Belt metallogenic province and part of the Yukon-Tanana Terrain. This Metallogenic Belt includes a number of large gold deposits in Alaska (Fort Knox, Pogo, Donlin Creek), the Klondike placer deposits which have produced in excess of 20 million oz gold and the new discoveries in the White Gold District (Golden Saddle, JP Ross, Coffee, etc.).

The underlying geology of the Yukon-Tanana Terrain is characterized by a broad zone of Devonian-Mississippian metamorphic orthogneisses (DMog), amphibolites (DMa) and

metasediments (DMps) as well as slightly younger Paleozoic rocks such as the Klondike Schist (Pka) and younger orthogneisses (Pog).
The above units are interpreted as older assemblages that have been intruded by Mesozoic plugs and stocks of granodiorite (EJgd) and Cretaceous granite/granodiorite (Kg/Kgd) thought to be related to the gold mineralization. All lithologies are unconformably overlain by massive andesite flows and breccias of the Late Cretaceous Carmacks Group (uVk) with local areas of early Early Cretaceous coarse clastic sedimentary rocks (IKcg) at the base of the sequence (Pautler 2010). All above lithologies are intruded by Cenozoic quartz/quartz-feldspar porphyries (Er).

Large NW-SE regional-scale faults are present trending parallel to regional geology and direction of the Tintina belt. Discontinuous lenses of ultramafic rocks with both volcanic and intrusive components occur along a northwest trend and marks the contact between the Klondike Schist (PKs) and older Potassium Feldspar Augen Orthogneisses (DMoga).



4.0 PROPERTY GEOLOGY

The claims are mainly underlain by Late Permian Klondike Schist (Pka) that is composed mainly of muscovite, sericite, chlorite and carbonate with occasional narrow graphite schist horizons. The schist is extremely rubbly and weathered near surface and appears to be very shallow dipping to the west at approximately 15-30 degrees. Narrow and shallow dipping quartz veins ranging from 2-30cm thick are present parallel to schistosity and contain trace galena and pyrite. The northwest portion of the claim is underlain by

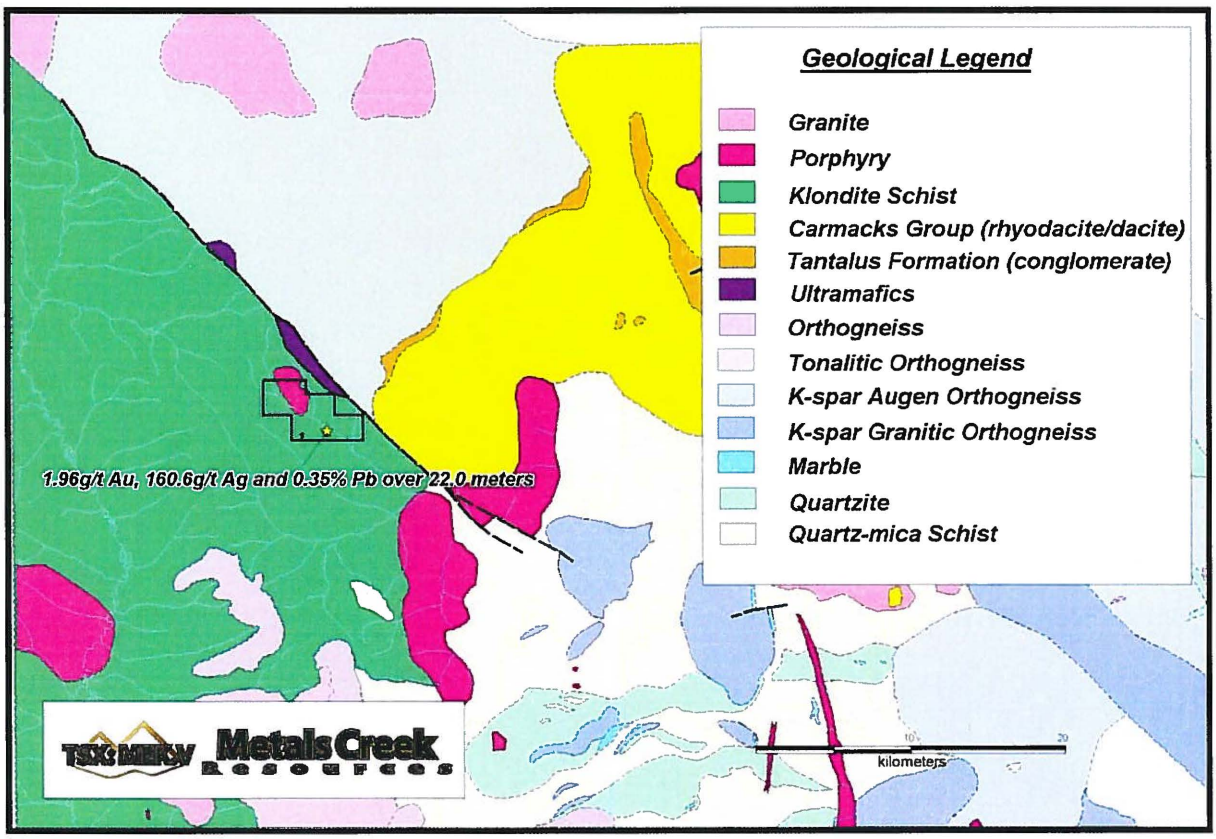
an altered feldspar porphyry intrusion with carbonatization and minor hematization that is vaguely seen in magnetics. Samples taken by MEK were all detection limit for gold. This intrusion is not seen on geological maps of the area.

Trenches E4-1 and E4-2: Mainly carbonate altered sericite schist with narrow chlorite and graphite schist horizons with minor quartz veining parallel to schistosity dipping at approximately 15-30 degrees to the west. Local areas within the trenches exhibit small scale contorting and folding of schistosity. Trench E4-1 returned 1.45g/t Au over 1.00 meter.

Trench E4-3: This trench consists of a bleached sercite schist with localized fine white clay, local hematite alteration as well as weak fuchsite alteration causing patchy deep red to a soft mint green colouration. Schistosity dips shallow to the west at 30 degrees. This alteration is associated with anomalous gold, silver and lead averaging 1.96g/t Au, 160.60g/t Ag and 0.35% Pb over 22.00m including 6.39g/t Au, 513.50g/t Ag and 0.86% Pb over 4.00m.

Trenches E5-1 and E5-2: These trenches are underlain with carbonate altered schist and narrow zones of chlorite-graphite schists. Trench E5-2 returned 1.02g/t Au over 5.00m.

The E4 anomaly coincidentally lies within a magnetic low signature.



5.0 2013 FIELD PROGRAM

In June of 2013 a program of soil sampling and limited trenching was undertaken to focus on better delineating Au-in-soil anomalies that were discovered through soil sampling in 2011 and 2012 by Metals Creek Resources. Two anomalous areas; E4 and E5 were the focus of the 2013 program. The field work commenced June 25t^{h} ending July 6th using two to seven field men. The field crews stayed at the Matson Creek placer camp and utilized an existing road and freshly established trail to access the property daily. One day of helicopter work was done to conduct the recce soil lines.

5.1 Trail Building

A Caterpillar D10 bulldozer was contracted from the Matson Creek placer operation to construct a 7.5km trail to the property from an existing "road" that exists from the Top of The World Highway to the Matson Creek Camp. The trail was constructed in one day granting access for the proceeding soil and trenching work.

5.2 Soil Sampling Procedures

Soil sampling took place at 25m stations on detailed-lines that were planned 100m apart to fill gaps in the 2012 soiling program. The detailed soils were conducted to help delineate the E4 and E5 with better confidence in areas of missing data. Recce-soil lines were conducted over parts of the claims staked in 2012 at 50m spacings. The soils were collected using a one-piece 'Edelman type' soil auger and packaged individually in craft soil bags. An attempt was made to reach as deep as possible beneath the organic humus horizon to sample the coarser C-horizon. Each sample was described on a check list in the field noting depth, colour and quality of the soil sampled. Also each location was GPS'd (Garmin GPSmap 76CSx) and flagged in the field for plotting accuracy and future reference if needed.

5.3 Soil Sampling Results

A total of 412 soils were collected collectively between the detailed and recce-soils. The detailed soils were successful in outlining and defining the southeast extension of the E4 anomaly while the soils in the vicinity of the E5 anomaly continues to show strong arsenic and barium signatures in a northwest-southeast orientation.

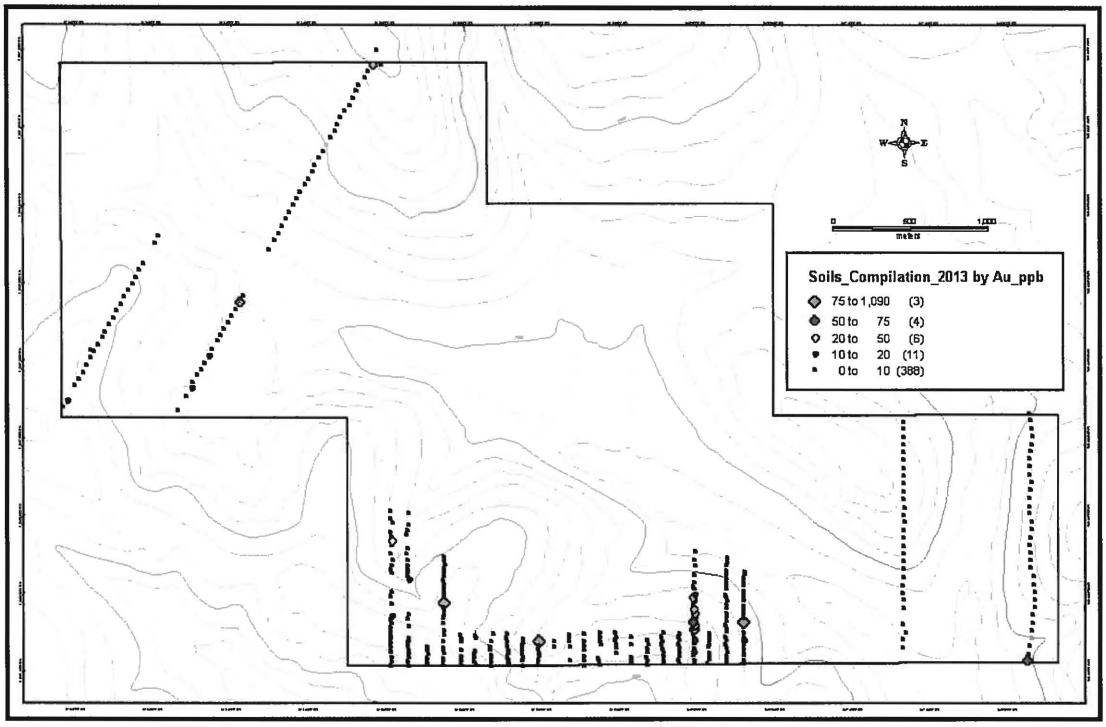
E4 is a large, continuous and distinct anomaly located on the southeast corner of the Squid East block with a coincident magnetic low. The exact dimension and orientation of the anomaly is better known as a result of the 2013 sampling and appears to be approximately 200m wide and 545m long in a northwest-southeast fashion; parallel to the magnetic low. A string of 10 soils with 9 greater than 15.3ppb Au were collected south-east of the previous 2012 soil sampling extending the anomaly an additional 120+ meters. Values for these samples reached as high as 67.2ppb Au with an elevated suite of pathfinder elements such as barium (Ba) <1,033ppm, mercury (Hg) <7.39ppm, silver (Ag) <6.5ppm and antimony (Sb) <20ppm.

E5 is a single Au-in-soil anomaly of 57.8ppb Au located on the southwest corner of the Squid East block with a clustering of anomalous arsenic (As) <194.4 ppm and Barium (Ba) <2,062 ppm associated with it. The strong clustering of arsenic (As) and barium (Ba) suggest a southeast orientation to the anomaly that is very similar to the E4 signature.

Anomaly E5 which is primarily an arsenic (As) anomaly has been extended to the northwest and southeast with additional 2013 soils. Along with the arsenic, a well defined linear barium anomaly has been better defined striking at approximately 130 degrees with a similar signature to the E4 anomaly. A single anomalous gold sample was achieved east of a 2012 gold soil that now shows a weak east-west orientation that may correlate with trenching results from that area.

A single anomalous gold soil from 2012 has been up-graded to a weak anomaly with another anomalous gold sample from the 2013 with a linear trend on a coincident magnetic low. Additional soils to extend this anomaly (E6) to the southeast could not be collected as a result of permafrost; therefore the anomaly remains open to the southeast.

On the recce-soil lines, weak to moderate single sample anomalies were achieved; generally at the beginning or ends of soil lines. See map for illustration.



5.4 Rock Sampling Results

Twenty-one rock samples were collected as grabs either during soiling/prospecting or from the trenches during trenching. No anomalous values were achieved with values ranging between <0.005 and 0.087ppb Au. An additional 239 chip samples were obtained from the five trenches and are described further in the trenching section.

5.5 Trenching Procedures

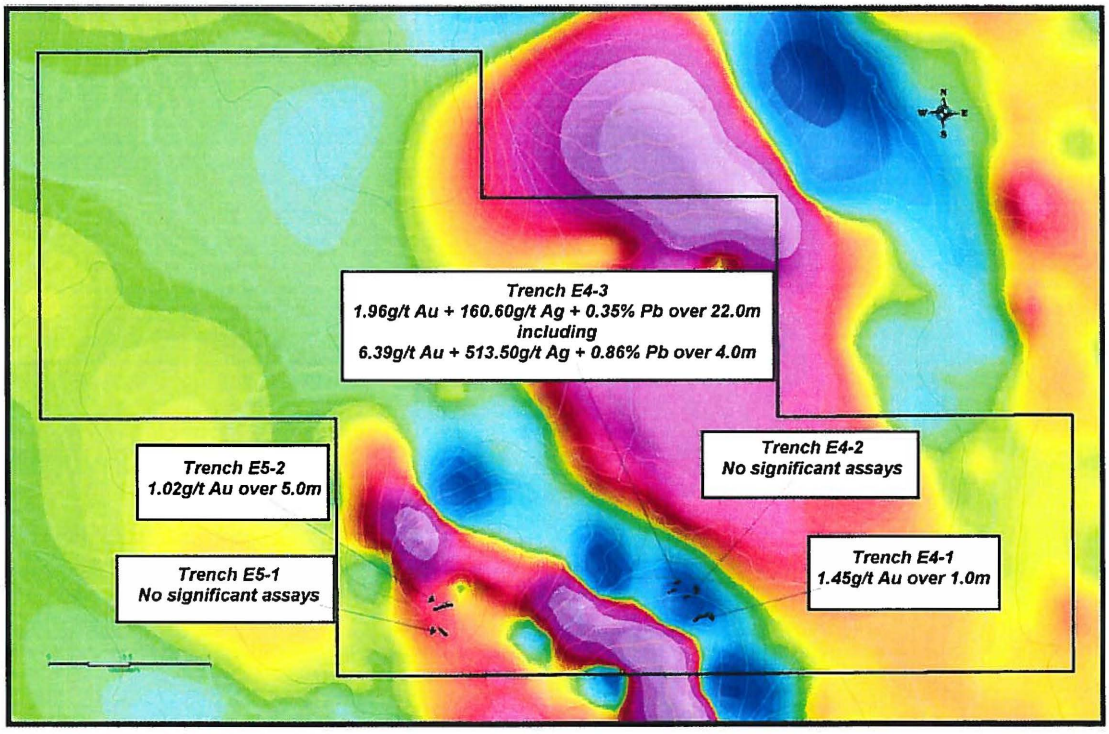
Mechanical trenching was conducted over the E4 gold anomaly as well as the arsenic E5 anomaly in an attempt to uncover the underlain geology and get an understanding of mineralization, alteration and structural controls causing the anomalies. The trenches were dug using a Volvo excavator that was contracted from Magna North Gold of the Matson Creek placer operation. The trenches were dug down through the overburden and patchy permafrost to rubbly and weathered bedrock not exceeding 1m in depth. The samples were collected by chipping or scooping representative material over 1, 2 or 5m measured lengths into clear and labeled polymer bags. The samples were sealed and bagged into fibre bags for shipment to the assay lab. The trenches were mapped for geology and structural controls and GPS'd for accuracy. Following the completion of the sampling and mapping, the trenches were backfilled and capped by vegetation and tree cover where possible.

5.6 Trench Sampling Results

A total of five trenches were trenched and sampled for a total of 239 chip samples.

Three trenches were attempted on the E4 anomaly laid out attempting to cross the potential strike direction of the soil anomaly. As a result of the permafrost, not all the planned trenching was completed resulting in large un-sampled and unmapped sections. As it turns out, only one of the three trenches was successful in permeating through the overburden and frozen ground to uncover gold (Au) bearing rock that is the cause of the soil anomaly. An anomalous result came from trench E4-1 at 1.45g/t Au over 1.0 meter. Trench E4-3 returned 1.96g/t Au, 160.60g/t Ag and 0.35% Pb over 22.0 meters including 6.39g/t Au, 513.50g/t Ag and 0.86% Pb over 4.0 meters from a bleached sercite schist with localized fine white clay, local hematite alteration as well as weak fuchsite alteration causing patchy deep red to a soft mint green coloration.

Two trenches were completed on the E5 arsenic anomaly in an area of very little permafrost. These trenches consisted of carbonate altered schist and narrow zones of chlorite-graphite schists. Trench E5-2 returned a single sample of 1.02g/t Au over 5.0 meters.



5.7 Analytical Procedures

MEK personal bagged the soil and rock samples into large fiber bags and delivered the samples to the ACME Prep Lab in Whitehorse YK for drying and sieving before being shipped to ACME Analytical Laboratory in Vancouver for analysis. The soils were dried at 60C, sieved to -80 mesh, digested by Aqua-regia and analyzed using ICP-MS. Rock samples were crushed; split then pulverized to 200 mesh and analyzed using a Fire assay fusion and AAS finish. The eleven anomalous samples that returned 1.96g/t Au, 160.60g/t Ag and 0.35% Pb over 22.0 meters were later re-assayed using acid-digestion and an ICP-MS finish.

6.0 CONCLUSIONS

The geochemical results for the 2013 soil sampling show a continuation of the anomaly E4 in a southeast striking direction. A string of 10 soils with 9 greater than 15.3ppb Au were collected south-east of the previous 2012 soil sampling, extending the anomaly an additional 120+ meters. Values for these samples reached as high as 67.2ppb Au with an elevated suite of pathfinder elements such as barium (Ba) <1,033ppm, mercury (Hg) <7.39ppm, silver (Ag) <6.5ppm and antimony (Sb) <20.7ppm.

Anomaly E5 which is primarily an arsenic (As) anomaly has been extended to the northwest and southeast with additional 2013 soils. Along with the arsenic, a well defined linear barium anomaly has been better defined striking at approximately 130 degrees with a similar signature to the E4 anomaly. A single anomalous gold sample was achieved east of a 2012 gold soil that now shows a weak east-west orientation that may correlate with trenching results from that area.

A single anomalous gold soil from 2012 has been up-graded to a weak anomaly with another anomalous gold sample from the 2013 with a linear trend on a coincident magnetic low. Additional soils to extend this anomaly (E6) to the southeast could not be collected as a result of permafrost; therefore the anomaly remains open to the southeast.

Mechanical trenching was conducted over the E4 gold anomaly as well as the arsenic E5 anomaly in an attempt to uncover the underlain geology and get an understanding of mineralization, alteration and structural controls causing the anomalies. The E5 arsenic anomaly was not successful in determining the cause of the arsenic anomaly but did intercept 1.02g/t Au over 5.00m from chip sampling. The E4 gold anomaly with associated pathfinders was the main priority of the trenching and three trenches were trenched. Trenches E4-1 and E4-2 hit impermeable permafrost in the area of the anomaly. The trenched portions the anomaly yielded detection limit gold values (<0.005ppb) in carbonate altered sercite schist that show the eastern limits of the anomaly. Trench E4-3 successfully trenched on the anomaly, uncovering bleached, locally hematite and fuchsite altered sericite schist that returned 1.96g/t Au, 160.60g/t Ag and 0.35% Pb over 22.00m including 6.39g/t Au, 513.50g/t Ag and 0.86% Pb over 4.00m.

7.0 RECOMMENDATIONS

Follow-up of the gold targets identified on the Anomaly E grid was a high priority with emphasis on the E4 soil anomaly. After encouraging trenching and soil results additional work should include:

- Diamond drilling is proposed on the E4 anomaly to test the extent of the gold and silver mineralization yielded from trench E4-3. A small 400-500 meter program should be conducted to try and outline the orientation and structural controls of the mineralized horizon(s).

- Detailed airborne magnetics is also proposed to complete the magnetic mapping in the region.

- Proposed are some test lines of an induced polarization survey to test the potential of the survey detecting mineralization at depth beneath the weathering profile. The trenching showed little evidence of sulphide mineralization in the weathered material.

8.0 EXPENDITURES

Total expenditures incurred on the Squid Property 2013 fieldwork program.
(Not capped expenditures claimed for YMIP-funding)

Helicopter	$ 3,755.50
Truck Rental	$ 1,963.15
Assays (soils and rock)	$ 14,676.83
Hotel	$ 348.00
Labour (2-7 persons over 12 days)	$ 18,455.93
Supplies (safety, field, food and gas)	$ 4,380.48
Flights (in Yukon)	$ 2,704.13
WCB	$ 3,456.00
Camp Room and Board	$ 4,650.00
Heavy Equipment (Contractor)	$ 17,332.50
Quad Rentals	$ 3,584.00
Report Writing/Comp/Maps	$ 4,000.00
TOTAL	**$ 79,984.67**

Total expenditures; capped for YMIP-funding re-imbursement:

Helicopter	$ 3,755.50
Truck Rental @ $0.61/km	$ 801.54
Assays (soils, silts and rock)	$ 14,676.83
Daily Field Expenses ($100/person/day)	$ 4,500.00
Labour (2-7 persons over 12 days)	$ 18,150.00
WCB	$ 3,456.00
Air Travel (Fixed wing)	$ 2,704.13
Heavy Equipment (Contractor)	$ 17,332.50
Quad Rentals	$ 1,600.00
Report Writing/Comp/Maps	$ 4,000.00
TOTAL	**$ 70,976.50**

9.0 STATEMENT OF QUALIFICATIONS

I, Don Heerema Jr., hereby certify that:

1. I am a practicing geologist in Thunder Bay, Ontario and reside at 26 Burriss St., Thunder Bay, Ontario, P7A 3C9.
2. I am a graduate of Lakehead University with a HBSc. (2002) in Geology.
3. I am a Canadian Citizen.
4. I have practiced my profession continually since graduation in 2002.
5. I am a practicing member of the Association of Professional Geoscientists of Ontario. (Registration #1528)
6. I do not have, nor do I expect to receive, directly or indirectly, any interest in the properties of Metals Creek Resources.

CERTIFICATE OF ANALYSIS WHI13000099.1

CLIENT JOB INFORMATION

Project: SQUID EAST
Shipment ID:
P.O. Number
Number of Samples: 129

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-250	129	Crush, split and pulverize 250 g rock to 200 mesh			WHI
G601	129	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only.
All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
"*" asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CLIENT JOB INFORMATION

Project: SQUID EAST
Shipment ID:
P.O. Number
Number of Samples: 131

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 90 days

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
R200-250	131	Crush, split and pulverize 250 g rock to 200 mesh			WHI
G601	131	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
1DX2	11	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
G6	6	Lead collection fire assay fusion - Grav finish	30	Completed	VAN

ADDITIONAL COMMENTS

Version 3 : G613-Ag included.

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only.
All results are considered the confidential property of the client. Acme assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
"*" asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
