LEGEND

INTRUSIVE ROCKS

EOCENE

quartz-feldspar porphyry

Eqfp — white-weathering, aphanitic to fine-grained, locally flow-banded quartz-feldspar porphyry; commonly contains phenocrysts of smoky grey quartz, biotite and white feldspar

CRETACEOUS

granite to granodiorite undifferentiated

MKUg — grey, resistant, generally medium- to coarse-grained, locally megacrystic, undifferentiated Tay River plutonic suite or Anvil plutonic suite granite to granodiorite

Tay River plutonic suite

MKTRg — Orchay phase - biotite ± hornblende granite to granodiorite

Anvil plutonic suite

MKAg — Mount Mye phase - biotite-muscovite granite; locally foliated

PERMIAN?

gabbro, harzburgite, serpentinite

Ps — mafic and ultramafic intrusive rocks; locally extensively sheared and serpentinized
Ps - serpentinite; Phz - harzburgite; Pg - gabbro

ORDOVICIAN-SILURIAN

gabbro

OSg — dark green, locally magnetic, coarse- to fine-grained, massive to foliated gabbro; subvolcanic dykes and sills to Menzie Creek basalts (OSMCb); enclosing phyllites locally display thin contact metamorphic aureoles

pyroxenite

OSpx — dark green, locally magnetic, coarse-grained, massive to foliated, variably serpentinized pyroxenite; subvolcanic dykes and sills to Menzie Creek basalts (OSMCb); enclosing phyllites locally display thin contact metamorphic aureoles

LAYERED ROCKS

YUKON-TANANA TERRANE

TRIASSIC

Faro Peak formation

TFPcg — resistant, massive, polymictic conglomerate; clasts include quartzite, chert, limestone and serpentinite; matrix contains detrital muscovite

TFPsl — dark grey carbonaceous, locally calcareous shale or siltstone interbedded with medium to dark grey, fine-grained limestone

TFPasg — interbedded cherty argillite, chert, sandstone and mafic greywacke or conglomerate

TFPb — massive, dark green, fine-grained to aphanitic basalt; may be equivalent to Anvil Range Group basalt

PALEOZOIC

metasedimentary and metavolcanic rocks

PYq — medium to dark grey, locally gritty, muscovitic meta-quartzite to quartzose schist; contains bands of greywacke, gabbro, phyllite; rarely contains eclogite lenses

PYl — grey to tan, massive limestone or dolostone

PYgr — medium to dark olive green, chloritic phyllite to amphibolite; locally displays relict equigranular igneous texture; locally includes ultramafic rocks and/or eclogite (PYgre)

PYog — felsic orthogneiss or paragneiss

SLIDE MOUNTAIN TERRANE

PERMIAN

Campbell Range formation

PCR — Epidotized, locally hematitic, dark green, resistant, massive, poorly foliated basalt or brecciated basalt; contains lesser grey, green, red and black bedded chert, and pale green epivolcaniclastic sandstone or conglomerate

EARLY CARBONIFEROUS-PERMIAN

Rose Mountain formation

CPRM — pale green, tan-weathering, bedded phyllitic chert interbedded with lesser maroon chert and argillite, especially near top of unit; also contains minor black bedded chert, black chert-pebble conglomerate, siltstone, limestone and argillite

DEVONIAN-PERMIAN

undivided Rose Mountain formation and Mount Aho formation

DPRMMA — dark grey to black, pale green, and maroon noncalcareous argillite and bedded chert with lesser siltstone, sandstone, chert-pebble conglomerate and limestone

DEVONIAN-EARLY CARBONIFEROUS

Mount Aho formation

DCMAba — silvery cream, tan-weathering, bedded phyllitic chert with light grey barite beds

DCMAbl — dark grey to black, noncalcareous, siliceous argillite and bedded chert with lesser siltstone, sandstone, chert-pebble conglomerate and limestone

DCMAg — pale green, noncalcareous argillite and bedded chert with lesser shale chip and siltstone breccia, grey sandstone and chert-pebble conglomerate; locally contains maroon argillite and bedded chert

ANCIENT NORTH AMERICA

DEVONIAN-EARLY CARBONIFEROUS

Earn Group

DCE — dark grey to black, noncalcareous, siliceous argillite with lesser siltstone, sandstone, chert-pebble conglomerate and limestone

SILURIAN

siltstone

Ssp — dark grey to black, platy, tan-weathering, thinly laminated, dolomitic siltstone

Road River Group

Steel Formation

Ss — tan- to orange-weathering, dolomitic, bioturbated, silty mudstone

ORDOVICIAN-DEVONIAN

quartz sandstone and dolostone

ODqd — Massive, medium-grained, quartz sandstone interbedded with pale tan-weathering limestone or dolostone

Road River Group

Duo Lake Formation

ODDL — dark grey to black, graptolitic argillite; contains lesser medium to pale grey siltstone and fine sandstone, medium grey limestone and basalt flows

Menzie Creek formation

OSMCb — undivided dark grey green, foliated basalt; includes massive and pillowed, locally amygdaloidal flows and heterolithic or monolithic breccias with lesser limestone, argillite and tuff

OSMCbp — dark grey green, locally amygdaloidal, massive and pillowed basalt with minor monolithic basalt breccia, volcaniclastic sandstone, siltstone and tuff

OSMCbbx — dark grey green, monolithic basalt breccia with lesser volcaniclastic sandstone, siltstone and tuff, and massive and pillowed flows

OSMCld — grey to off-white limestone locally interbedded with orange-weathering dolostone

CAMBRIAN-ORDOVICIAN

Vangorda formation

€OVp — soft, silvery grey, calcareous phyllite with lesser medium crystalline, grey marble, dark grey to black phyllite and dark green gabbro sills and dykes (OSg)

€OVcs — pale green and dark purplish brown, thinly banded calc-silicate rock with lesser black schist, marble and dark green gabbro dykes and sills (OSg)

€OVg — black, locally calcareous, carbonaceous phyllite or schist; commonly contains thin quartzose siltstone interbeds; interbanded with dark green gabbro dykes and sills (OSg)

€OVl — pale to dark grey, foliated marble

UPPER PROTEROZOIC-CAMBRIAN

Mount Mye formation

uP€MMp — brownish grey, noncalcareous, pervasively foliated phyllite; locally indistinctly bedded; contains minor siltstone, marble, calc-silicate rock, carbonaceous phyllite and dark green gabbro dykes and sills (OSg)

uP€MMs — brownish grey, noncalcareous, pervasively foliated muscovite-biotite schist; may contain staurolite, garnet, andalusite, or fibrolite; locally indistinctly bedded; contains minor siltstone, marble, calc-silicate rock, carbonaceous phyllite and dark green gabbro dykes and sills (OSg)

uP€MMcs — pale green and dark purplish brown, thinly banded calc-silicate rock; contains marble and silicated marble beds and dark green gabbro dykes and sills (OSg); lithologically similar to Vangorda calc-silicate rock

uP€MMl — dark to pale grey, medium crystalline marble; typically contains abundant boudins of calc-silicate rock and/or quartz; locally contains coarsely crystalline garnet-pyroxene skarn

uP€MMg — black phyllite to schist; locally contains lenses and beds of black carbonaceous limestone and dark green gabbro dykes and sills (OSg)

SYMBOLS

- geological contact (defined, approximate, assumed)
- fault or vein-fault, displacement unknown (defined, approximate, assumed)
- thrust fault (defined, approximate, assumed, teeth on hanging wall)
- normal fault (defined, approximate, assumed, dot on downthrown side)
- strike-slip fault (defined, approximate, assumed)
- fold surface axial trace (upright anticline, syncline, overturned anticline, syncline)
- metamorphic boundary (symbol on higher grade side) — phyllite / schist
- bedding (tops not known) — 090/20
- foliation (one tick indicates earliest phase of deformation, two or more ticks indicate subsequent phase(s) of deformation) — 090/20
- foliation (phase of deformation unknown) — 090/20
- lineation (one arrow indicates earliest phase of deformation, two or more arrows indicate subsequent phase(s) of deformation) — 045/05
- joint — 090/20
- igneous compositional banding — 090/20
- igneous mineral lineation — 045/05
- fault plane orientation, shear band (C-bands) orientation — 090/20
- shear band plane of flattening (S bands) — 090/20
- mineral lineation/rodding associated with shear bands — 045/05
- apparent dip of measured bedding, foliation (in cross-section)
- foliation form lines in cross-section
- limit of outcrop, subcrop
- projection to surface of mineralized volume
- limit of mapping
- isotopic age determination sample location and age includes radiometric age, 2 sigma error, and sample number — 69.3 ± 0.5 Ma GSC70-45
- fossil sample, includes sample reference number — GC-98-05
- barren fossil sample, includes sample reference number — GC-98-05
- geochemical sample-whole rock with major oxides, minor and trace elements, includes assay number and reference — A098, (1)
- survey control station with station name and elevation (in metres) — HW10 1500
- diamond drill hole collar (overburden depth/ total depth) in metres — 70X–01 (15/100)
- rotary drill hole collar (overburden depth/ total depth) in metres — 70RH–01 (15/100)
- field station
- trench
- line of cross-section — A B
- primary road
- secondary road, trail, cut line
