Moose Survey - Teslin Burn

Date: February 23, 1979

Aircraft: Bell 206 - T.N.T.A.

Pilot: G. Howle

Crew: D. Larsen  
D. Gauthier

Location: Six miles S.W. of Hayes Peak

Weather: Clear, -20°C, calm

Survey Time: 1400 - 1500 hours

Observations: A survey block of known moose density was selected for comparative purposes. The area, six miles S.W. of Hayes Peak, was previously surveyed the last part of November - first part of December of 1978. A total count was attempted during both surveys.

Observations correspond to numbers on the attached map.

Moose Survey  
Teslin Burn

11. ♂, ♀ with calf
12. ♀ with calf; ♀
13. ♂
14. ♀ with yearling\χ?; yearling ♂

A total of 28 moose (13♀, 7 calves, 3 yearlings (?)  
5♂) were seen in this survey block. Most of the  
observations were made between 3500 - 4000 feet  
elevation.

NOTE: This survey was flown during the February 23 caribou re-location  
survey.
