NATIONAL TOPOGRAPHIC SYSTEM

Red Lake Cwis (2) Aug 1959 reports an estimated 20,000 caribou 50mi NE of Dawson in ice Scela Pass heading NNW SUMMER DISPERSAL 1:250,000

3. Osgood 1904: Mammals of the ascending Range. Certain parts of the mountains about the head of Coal Creek are scored with caribou trails. These extend for several miles down into the timber, but for the most part traverse open rolling slopes and high ridges above the limit of trees. ... But in July during cool stormy weather caribou were found in small herds on all of these ridges, and in the high mountains at the head of the west branch of Coal Creek, several miles from our camp on the east branch. Insect relief areas—snowpatches, ridges

(1) Dawson Daily June 7, 1905 Peter Monro came from the Blackstone country. He left the S Canton at the head of the 12 mile
