

GEOLOGICAL SURVEY OF CANADA
DEPARTMENT OF ENERGY, MINES AND RESOURCES

LEGEND

- Main areas containing muscovite granite
- Other granitoid rocks of the Preissac-Lacorne batholith

- Location of pegmatite, aplite, or vein
- Main beryllium occurrence ●
- Main lithium occurrence ○
- Combined beryllium-lithium occurrence ⊙
- Minor occurrences of beryllium, lithium B, L
- Molybdenite M

PROPERTIES DESCRIBED IN TEXT

- (a) Height of Land Mine
- (b) Molybdenite Corporation
- (c) Massberyl
- (d) Valor Lithium Mines Limited
- (e) Lot 20-21, Range X, Lacorne

Geology compiled by R. Mulligan, 1963

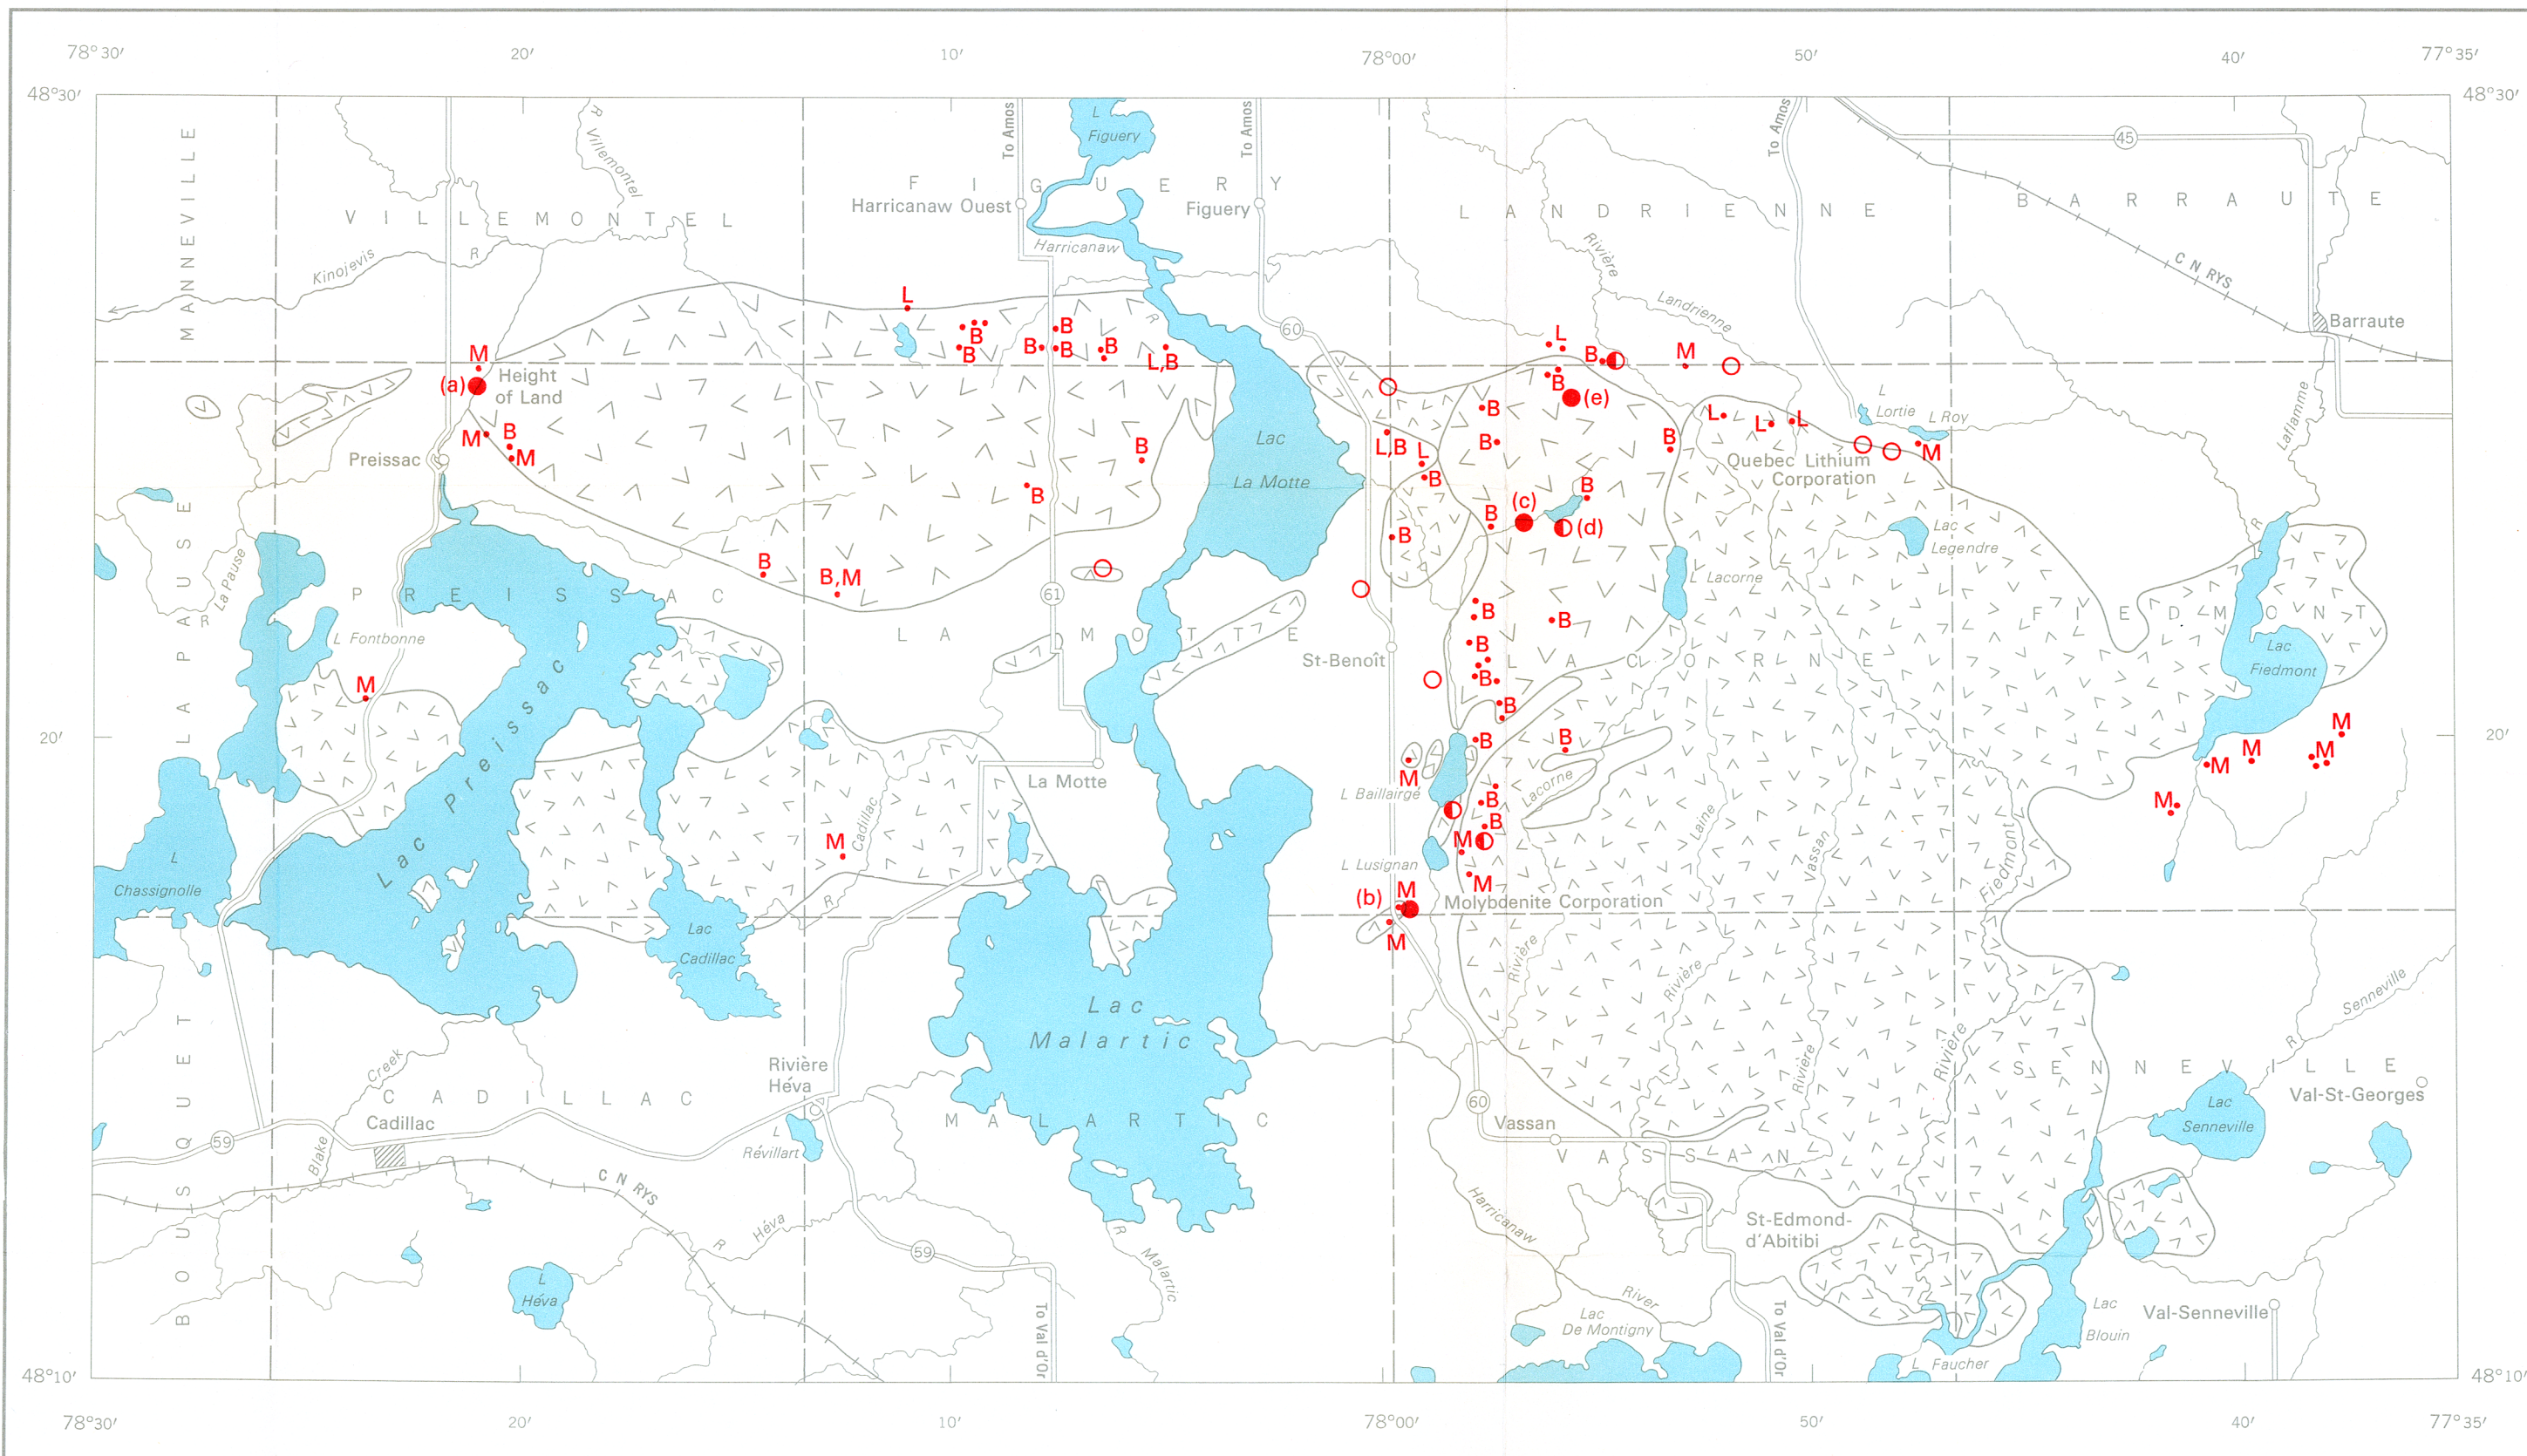

To accompany G.S.C. Economic Geology Report No. 23, by R. Mulligan

Geological cartography by the Geological Survey of Canada, 1967

- Road, all weather
- Township boundary

Base-map cartography by the Geological Survey of Canada, 1967 from maps published at 1:126,720 by the Surveys and Mapping Branch, 1947, 1949

Mean magnetic declination, 13°08' West, decreasing 1' annually. Readings vary from 13°18' in the SE corner to 13°44' in the NW corner of the map-area

Printed by the Surveys and Mapping Branch

Published 1967, the Centennial of Canadian Confederation 1867-1967

INDEX MAP
