

Figure 62. Schematic seismic section illustrating a pre-Albian normal fault structure and potential trap configuration in Sharp Mountain Subbasin (see Fig. 60 for location). Local preservation of hanging-wall strata within interbedded sandstone and shale succession (Jurassic-Lower Cretaceous; J-IK). From Lane (2010). Part of Chevron Canada Resources seismic reflection line 12bb. I-uK, Lower to Upper Cretaceous clastic succession; J-IK, Jurassic to Lower Cretaceous clastic succession; DCss, Imperial/Tuttle formations; Dsh, Upper Devonian Imperial Formation, shale dominant succession.
