

**Figure 67.** Schematic seismic section illustrating thrust-repeated stacked reservoirs, fault-propagation folds and subthrust structures associated with backthrusts in a triangle zone adjacent to Dave Lord Mountains in the Keele Range (see Fig. 66 for location). From Lane (1996). Chevron Canada Resources seismic reflection line 39X. I-uK, Lower to Upper Cretaceous clastic succession; J-IK, Jurassic to Lower Cretaceous clastic succession; Pz, Paleozoic succession. Faults are dashed when inferred.
