

LEGEND

- PALAEZOIC (?)**
- 8 Conglomerate, sandstone
  - 7 Diabase and gabbro
  - 6 Granite, granodiorite
  - 5 Gabbro
- PROTEROZOIC (LATE-PRECAMBRIAN)**
- 4 Cherty argillite, red to grey slate, some interbedded quartzite
  - 3 Quartzite, some conglomerate and interbedded grey to red slates; in places cut by stockwork of vein quartz
  - 2 Fine-grained green to blue-grey dacitic flows; tuffs and agglomerates
  - 1a - Feldspar and feldspar-quartz porphyry
  - 1b - Fragmental, agglomeratic, and tuffaceous phases of feldspar-quartz porphyry
- SLATE GROUP**

- Fault
- Bedding (inclined, vertical, overturned)
- Bedding (direction of dip known, upper side of bed unknown)
- Schistosity (inclined, vertical)
- Anticlinal axis
- Synclinal axis
- Pitchblende occurrence
- Building
- Shaft
- Pit or trench
- Base line
