---

## 1.0 INTRODUCTION

This technical memo presents the scope of work, methodology and results of the pumping test program conducted on the groundwater test wells WW15-01 and WW15-02 at Kudz Ze Kayah in October 2015.

Long-term pumping tests (12 hours in overburden, 24 hours in shallow bedrock) were undertaken in order to determine the bulk hydraulic conductivities of the different hydrostratigraphic units (permeable overburden and shallow fractured bedrock) to better determine anticipated dewatering rates for a possible future open pit.

The pumping tests also provided the opportunity to identify aquifer boundaries that may be present given the topography in the vicinity of the proposed open pit and collect groundwater quality samples.

## 2.0 SCOPE OF WORK

The scope of work undertaken for the pumping test program included:

- Review regulatory and permit requirements to design and conduct the pumping test program in consideration of these requirements;
- Conduct step drawdown pumping tests at WW15-01 and WW15-02 in order to estimate a pumping rate for the constant rate pumping tests;
- Monitor recovery of water levels following the step drawdown tests;
- Conduct constant rate pumping tests at WW15-01 and WW15-02;
- Monitor recovery of water levels following the constant rate test;
- Monitor response of water levels in observation wells during the pumping test program;
- Monitor discharge and ensure water did not flow directly into surface water bodies.

## 3.0 REGULATIONS

BMC Minerals (No. 1) Ltd. (BMC) currently hold a Type A Water Licence No. QZ97-026 (the Licence) for the Kudz Ze Kayah project that was issued on November 2, 1999 and expires on September 28, 2018. Under this Licence, the licensee is authorized to dewater the overburden and bedrock in the area of the proposed open pit and discharge the water to Geona Creek (Part D.43, p. 10).

Both test wells WW15-01 and WW15-02 are located in the area of the proposed open pit and were completed so they can potentially be used as future dewatering wells. Tetra Tech EBA, in consultation with BMC, therefore determined that the pumping tests can be completed under the existing Type A Water Licence.

Even though the Licence permits direct discharge of groundwater from the overburden and bedrock aquifers within the open pit area into Geona Creek, all groundwater produced during the pumping tests was discharged to ground and returned to the same aquifers it was extracted from to minimize or eliminate any potential environmental impact.

The pumping tests were also designed to minimize the amount of groundwater extracted during each of the pumping tests. The total extraction rate was below 300 m<sup>3</sup>/day for all pumping tests conducted, i.e., below the threshold for the requirement of a water licence for water use associated with a quartz mining undertaking. However, a Schedule 3 notice (Notification of Water Use Without a Licence) was not required because BMC holds a valid Type A Water Licence for the project which allows the overburden and bedrock aquifers in the area of the proposed open pit to be dewatered.

## 4.0 WELL SUMMARY

### 4.1 Pumping Wells

Pumping tests were conducted on test wells WW15-01 and WW15-02 (200 mm / 8" diameter). These two wells were drilled, installed and developed under the direction of Tetra Tech EBA in July and August 2015. A summary of well construction details is provided in Table 1.

**Table 1: Well Construction Summary**

| Well ID | Unit Completed In          | Total Depth (m bg) | Aquifer Thickness (m) | Screen Location (m bg) | Notes  |
|---------|----------------------------|--------------------|-----------------------|------------------------|--|
| WW15-01 | Overburden (Sandy GRAVEL)  | 15.2               | 4.2                   | 11.9 - 15.2            | <ul style="list-style-type: none"><li>▪ Drilled to the top of bedrock.</li><li>▪ Screened (80-slot) in permeable sand and gravel unit overlying bedrock.</li></ul> |
| WW15-02 | Bedrock (fractured schist) | 38.1               | 35.1                  | 22.9 - 35.0            | <ul style="list-style-type: none"><li>▪ Open hole from 3.4 to 38.1 mbg.</li><li>▪ PVC liner installed with 20-slot screen from 22.9 to 35 mbg.</li></ul>           |

### 4.2 Observation Wells

Wells in the vicinity of WW15-01 and WW15-02 were identified as observation wells and groundwater elevations in these wells measured over the course of the pumping test program. A summary of wells used as observation wells is provided in Table 2.

**Table 2: Observation Wells**

| Pumping Well ID | Observation Well | Unit Observation Well Completed In | Distance From Pumping Well (m) | Direction From Pumping Well |
|-----------------|------------------|------------------------------------|--------------------------------|-----------------------------|
| WW15-01         | BH95-23          | Overburden                         | 24                             | SE                          |
| WW15-02         | BH95-21          | Bedrock                            | 132                            | SSW                         |
|                 | BH95-22          | Bedrock                            | 97                             | ESE                         |

## 5.0 PUMPING TEST PROGRAM

### 5.1 WW15-01

#### 5.1.1 Step drawdown Pumping Test

A step drawdown pumping test consisting of four 1 hour steps of 37.5, 75, 150 and 250 USgpm was undertaken at WW15-01 on October 4, 2015. The maximum drawdown during the 250 USgpm step was 5.09 m (16.7 ft) below the static water level, at which point the water level was drawn down to the pump inlet. This occurred approximately two minutes into the 250 USgpm step and the test was halted at this point.

After completing the step drawdown test, Tetra Tech EBA determined that the well could be pumped at 70 USgpm for a 12 hour constant rate test.

#### 5.1.2 Constant Rate Pumping Test

A constant rate pumping test was conducted on October 5, 2015 after the well had recovered to 96% of the pre-test water level (see Figure 2). The well was pumped at 70 USgpm for 12 hours and the maximum drawdown during this test was 3.29 m (10.8 ft).

The groundwater level had recovered to 91 percent of drawdown (from static) after 11.5 hours, at which point the pump and associated pipework was removed from the well.

#### 5.1.3 Water Discharge

Water pumped from the well during the pumping test program was directed to ground approximately 40 m from WW15-01 via lay flat hosing to a vegetated and low lying area to the north of WW15-01 (Figure 1, Photos 1-4). This was considered far enough from the pumping and observation wells for re-circulation of the pumped water into the aquifer not to be of concern. This location also maximised the distance to nearby surface water bodies (the closest a lake approximately 200 m north of WW15-01), allowing for higher pumping rates with less chance of overland flow reaching the lake.

The discharge area sloped gently to the north and discharged water was observed to flow in a generally northerly direction away from WW15-01 and BH95G-23. The extent of the discharged water and potential for environmental impact was closely monitored over the course of the pumping test program. The maximum extent of water flow on surface after the cessation of the constant rate test was approximately 150 m to the north of WW15-01, within the footprint of a former drill pad. There was no evidence of water discharged during the pumping test program directly or indirectly migrating to the closest nearby surface water body, the lake approximately 50 m to the north of the maximum water extent (Figure 1, Photo 4).

Overland flow was noted to be passive and there was no observable transportation of particulate matter (i.e. silt, sand, organic matter) between the discharge point and the maximum extent of flow.

Table 3 details the volumes discharged from WW15-01 during the pumping test program.

**Table 3: Pumping Test Program Discharge Volumes – WW15-01**

| Date     | Test Type          | Volume Discharged (L) | Total Volume Discharged in Day (m <sup>3</sup> ) |
|----------|--------------------|-----------------------|--|
| 4-Oct-15 | Step Drawdown Test | 8,517                 | 66   |
|          |                    | 17,034                |  |
|          |                    | 34,069                |  |
|          |                    | 6,624                 |  |
| 5-Oct-15 | Constant Rate Test | 190,784               | 191  |

## 5.2 Pumping Test Results

Water levels were recorded during the step drawdown and constant rate tests at WW15-01. Observed drawdown and recovery in WW15-01 during the constant rate pumping test is shown in Figure 2. The maximum drawdown observed in WW15-01 during the constant rate pumping test was 3.49 m (11.5 ft). As shown in Figure 2, the water level continued to fall throughout the 12-hour pumping test, although the data indicated the level was close to stabilising when the test was completed.

A datalogger was installed in nearby groundwater monitoring well BH95G-23 during the pumping test conducted on WW15-01. BH95G-23 is a small diameter (32 mm) well which is screened in the same aquifer as WW15-01. The data recorded at this well (presented in Figure 2) shows a direct and rapid hydraulic connection between the two wells.

Tetra Tech EBA completed a preliminary analysis of the pumping test data. The full data analysis will be included with the hydrogeological baseline report. The preliminary inferred aquifer transmissivity and hydraulic conductivity for the overburden aquifer in the area of the test well WW15-01 and observation well BH95G-23 are shown in Table 4.

**Table 4: Pumping Test Results WW15-01**

| Well    | Method       | Transmissivity T    | Hydraulic Conductivity K |
|---------|--------------|---------------------|--------------------------|
|         |              | [m <sup>2</sup> /s] | [m/s]                    |
| WW15-01 | Cooper-Jacob | 5E-04               | 1E-04                    |

## 5.3 WW15-02

### 5.3.1 Step drawdown Pumping Test

A step drawdown pumping test consisting of four 1-hour steps of 2, 4, 12 and 30 USgpm was undertaken at WW15-02 on October 9, 2015. The maximum drawdown during the 30 USgpm step was 24.4 m (80 ft) below the static water level. At approximately 3.5 minutes into the fourth step (30 USgpm), the drawdown increased rapidly

and the pumping rate dropped, even with the discharge valve fully open. As the water level dropped, the pumping rate also dropped as the pump worked harder to overcome the increasing head. The step drawdown test was halted after 18 min in the fourth step as useful data was no longer being collected.

After completing the step drawdown, Tetra Tech EBA determined that the well could be pumped at 11 USgpm for the 24-hour constant rate test.

### **5.3.2 Constant Rate Pumping Test**

A constant rate pumping test was conducted on October 9, 2015 after the well had recovered to 94% of the pre-test water level (see Figure 3). The well was pumped at 11 USgpm for 2 hours, at which point the water level had drawn down approximately 28 m (92 ft), which was a markedly different response to being pumped at this rate to what had been observed during the step drawdown test. With drawdown showing no signs of levelling out and the water level nearing the pump inlet, the test was halted at this point.

The well was left to recover to 95% of the pre-test water level and a second constant rate test commenced on October 10, 2015. The well was pumped at 3 USgpm for a 24 hour period and the maximum drawdown during this test was 3.30 m (10.8 ft).

The groundwater level had recovered to 75 percent of drawdown (from static) after 6 hours, at which point the pump and associated pipework was removed from the well.

### **5.3.3 Water Discharge**

Water pumped from the well during the pumping test program was directed via lay flat hosing to a vegetated area approximately 60 m to the southeast of WW15-02 (Figure 1, Photos 5 and 6). This was considered far enough from the pumping and observation wells for re-circulation of the pumped water into the aquifer not to be of concern. This location also maximised the distance to nearby surface water bodies (the closest a creek on the valley floor approximately 200 m east of WW15-02), allowing for higher pumping rates with less chance of overland flow reaching the creek.

At the point of discharge, the ground sloped gently to the east towards the creek. Discharged water was observed to flow in a generally easterly direction for several metres prior to flowing beneath thick vegetation. The extent of the discharged water was monitored over the course of the pumping test program. Over the length of the pumping test program, discharge water was not observed to daylight within 200 m downslope of the point where it entered the vegetation. There was no evidence of discharged water directly or indirectly migrating and discharging to the creek.

Overland flow was noted to be passive and there was no observable transportation of particulate matter (i.e. silt, sand, organic matter) between the discharge point and the maximum observed extent of flow.

Table 5 details the volumes discharged from WW15-02 during the pumping test program.

**Table 5: Pumping Test Program Discharge Volumes - WW15-02**

| Date      | Test Type          | Volume Discharged (L) | Total Volume Discharged in Day (m3) |
|-----------|--------------------|-----------------------|-------------------------------------|

## 5.4 Pumping Test Results

Water levels were recorded during the step drawdown and constant rate tests at WW15-02. Observed drawdown and recovery in WW15-02 during the constant rate pumping test is shown in Figure 3. The maximum drawdown observed during the constant rate pumping test was 3.30 m (10.8 ft) below the static water level. As shown in Figure 3, the water level continued to fall throughout the 24-hour pumping test, although the data shows there was very little change in level during the last 14 hours of the test (< 0.1 m).

Dataloggers were installed in nearby groundwater wells BH95G-21 and BH95G-22 during the pumping test program conducted on WW15-02. Both of these wells are small diameter (32 mm) monitoring wells. BH95G-21 is screened in bedrock from approximately 6 to 9 m bg while BH95G-22 is screened across the overburden and bedrock aquifers. The data recorded from these two wells showed no response to the pumping of WW15-02 during the step drawdown or constant rate tests. While this infers there may not be a hydraulic connection between these wells, the pumping rates during the program, particularly during the 24-hour constant rate test (3 USgpm) may not have been sufficient to induce a response in the observation wells.

Tetra Tech EBA completed a preliminary analysis of the pumping test data. The full data analysis will be included with the hydrogeological baseline report. The preliminary inferred aquifer transmissivity and hydraulic conductivity for the overburden aquifer in the area of the test well WW15-01 and observation well BH95G-23 are shown in Table 6.

**Table 6: Pumping Test Results WW15-02**

| Well    | Method       | Transmissivity T    | Hydraulic Conductivity K |
|---------|--------------|---------------------|--------------------------|
|         |              | [m <sup>2</sup> /s] | [m/s]                    |
| WW15-02 | Cooper-Jacob | 8E-5                | 2E-6                     |

## 6.0 CONCLUSIONS

The pumping test program at WW15-01 and WW15-02 was successfully completed by Tetra Tech EBA in October 2015. To minimize any potential for environmental damage, groundwater was discharged to ground and returned to the same aquifer that it originated from. The discharge was monitored closely during the pumping tests to verify that the discharge water did not directly or indirectly migrate into nearby surface water bodies.

The following conclusions are based on the data collected during this program:

- Pumping test results from WW15-01 indicates the overburden aquifer at this location has a transmissivity in the order of  $5 \times 10^{-4}$  m<sup>2</sup>/s and a hydraulic conductivity in the order of  $1 \times 10^{-4}$  m/s which are typical values for a highly permeable sand and gravel aquifer.
- Pumping test results from WW15-02 indicates the overburden aquifer at this location has a transmissivity in the order of  $8 \times 10^{-5}$  m<sup>2</sup>/s and a hydraulic conductivity in the order of  $2 \times 10^{-6}$  m/s which are typical values for a fractured bedrock aquifer.

## 7.0 LIMITATIONS OF REPORT

This report and its contents are intended for the sole use of BMC Minerals (No. 1) Ltd. and their agents. Tetra Tech EBA Inc. does not accept any responsibility for the accuracy of any of the data, the analysis, or the recommendations contained or referenced in the report when the report is used or relied upon by any Party other than BMC Minerals (No. 1) Ltd., or for any Project other than the proposed development at the subject site. Any such unauthorized use of this report is at the sole risk of the user. Use of this report is subject to the terms and conditions stated in Tetra Tech EBA's General Conditions that are attached to this memo.

## GEOENVIRONMENTAL REPORT

This report incorporates and is subject to these "General Conditions".

---

### 1.0 USE OF REPORT AND OWNERSHIP

This report pertains to a specific site, a specific development, and a specific scope of work. It is not applicable to any other sites, nor should it be relied upon for types of development other than those to which it refers. Any variation from the site or proposed development would necessitate a supplementary investigation and assessment.

This report and the assessments and recommendations contained in it are intended for the sole use of Tetra Tech EBA's client. Tetra Tech EBA does not accept any responsibility for the accuracy of any of the data, the analysis or the recommendations contained or referenced in the report when the report is used or relied upon by any party other than Tetra Tech EBA's Client unless otherwise authorized in writing by Tetra Tech EBA. Any unauthorized use of the report is at the sole risk of the user.

This report is subject to copyright and shall not be reproduced either wholly or in part without the prior, written permission of Tetra Tech EBA. Additional copies of the report, if required, may be obtained upon request.

### 2.0 ALTERNATE REPORT FORMAT

Where Tetra Tech EBA submits both electronic file and hard copy versions of reports, drawings and other project-related documents and deliverables (collectively termed Tetra Tech EBA's instruments of professional service), only the signed and/or sealed versions shall be considered final and legally binding. The original signed and/or sealed version archived by Tetra Tech EBA shall be deemed to be the original for the Project.

Both electronic file and hard copy versions of Tetra Tech EBA's instruments of professional service shall not, under any circumstances, no matter who owns or uses them, be altered by any party except Tetra Tech EBA. The Client warrants that Tetra Tech EBA's instruments of professional service will be used only and exactly as submitted by Tetra Tech EBA.

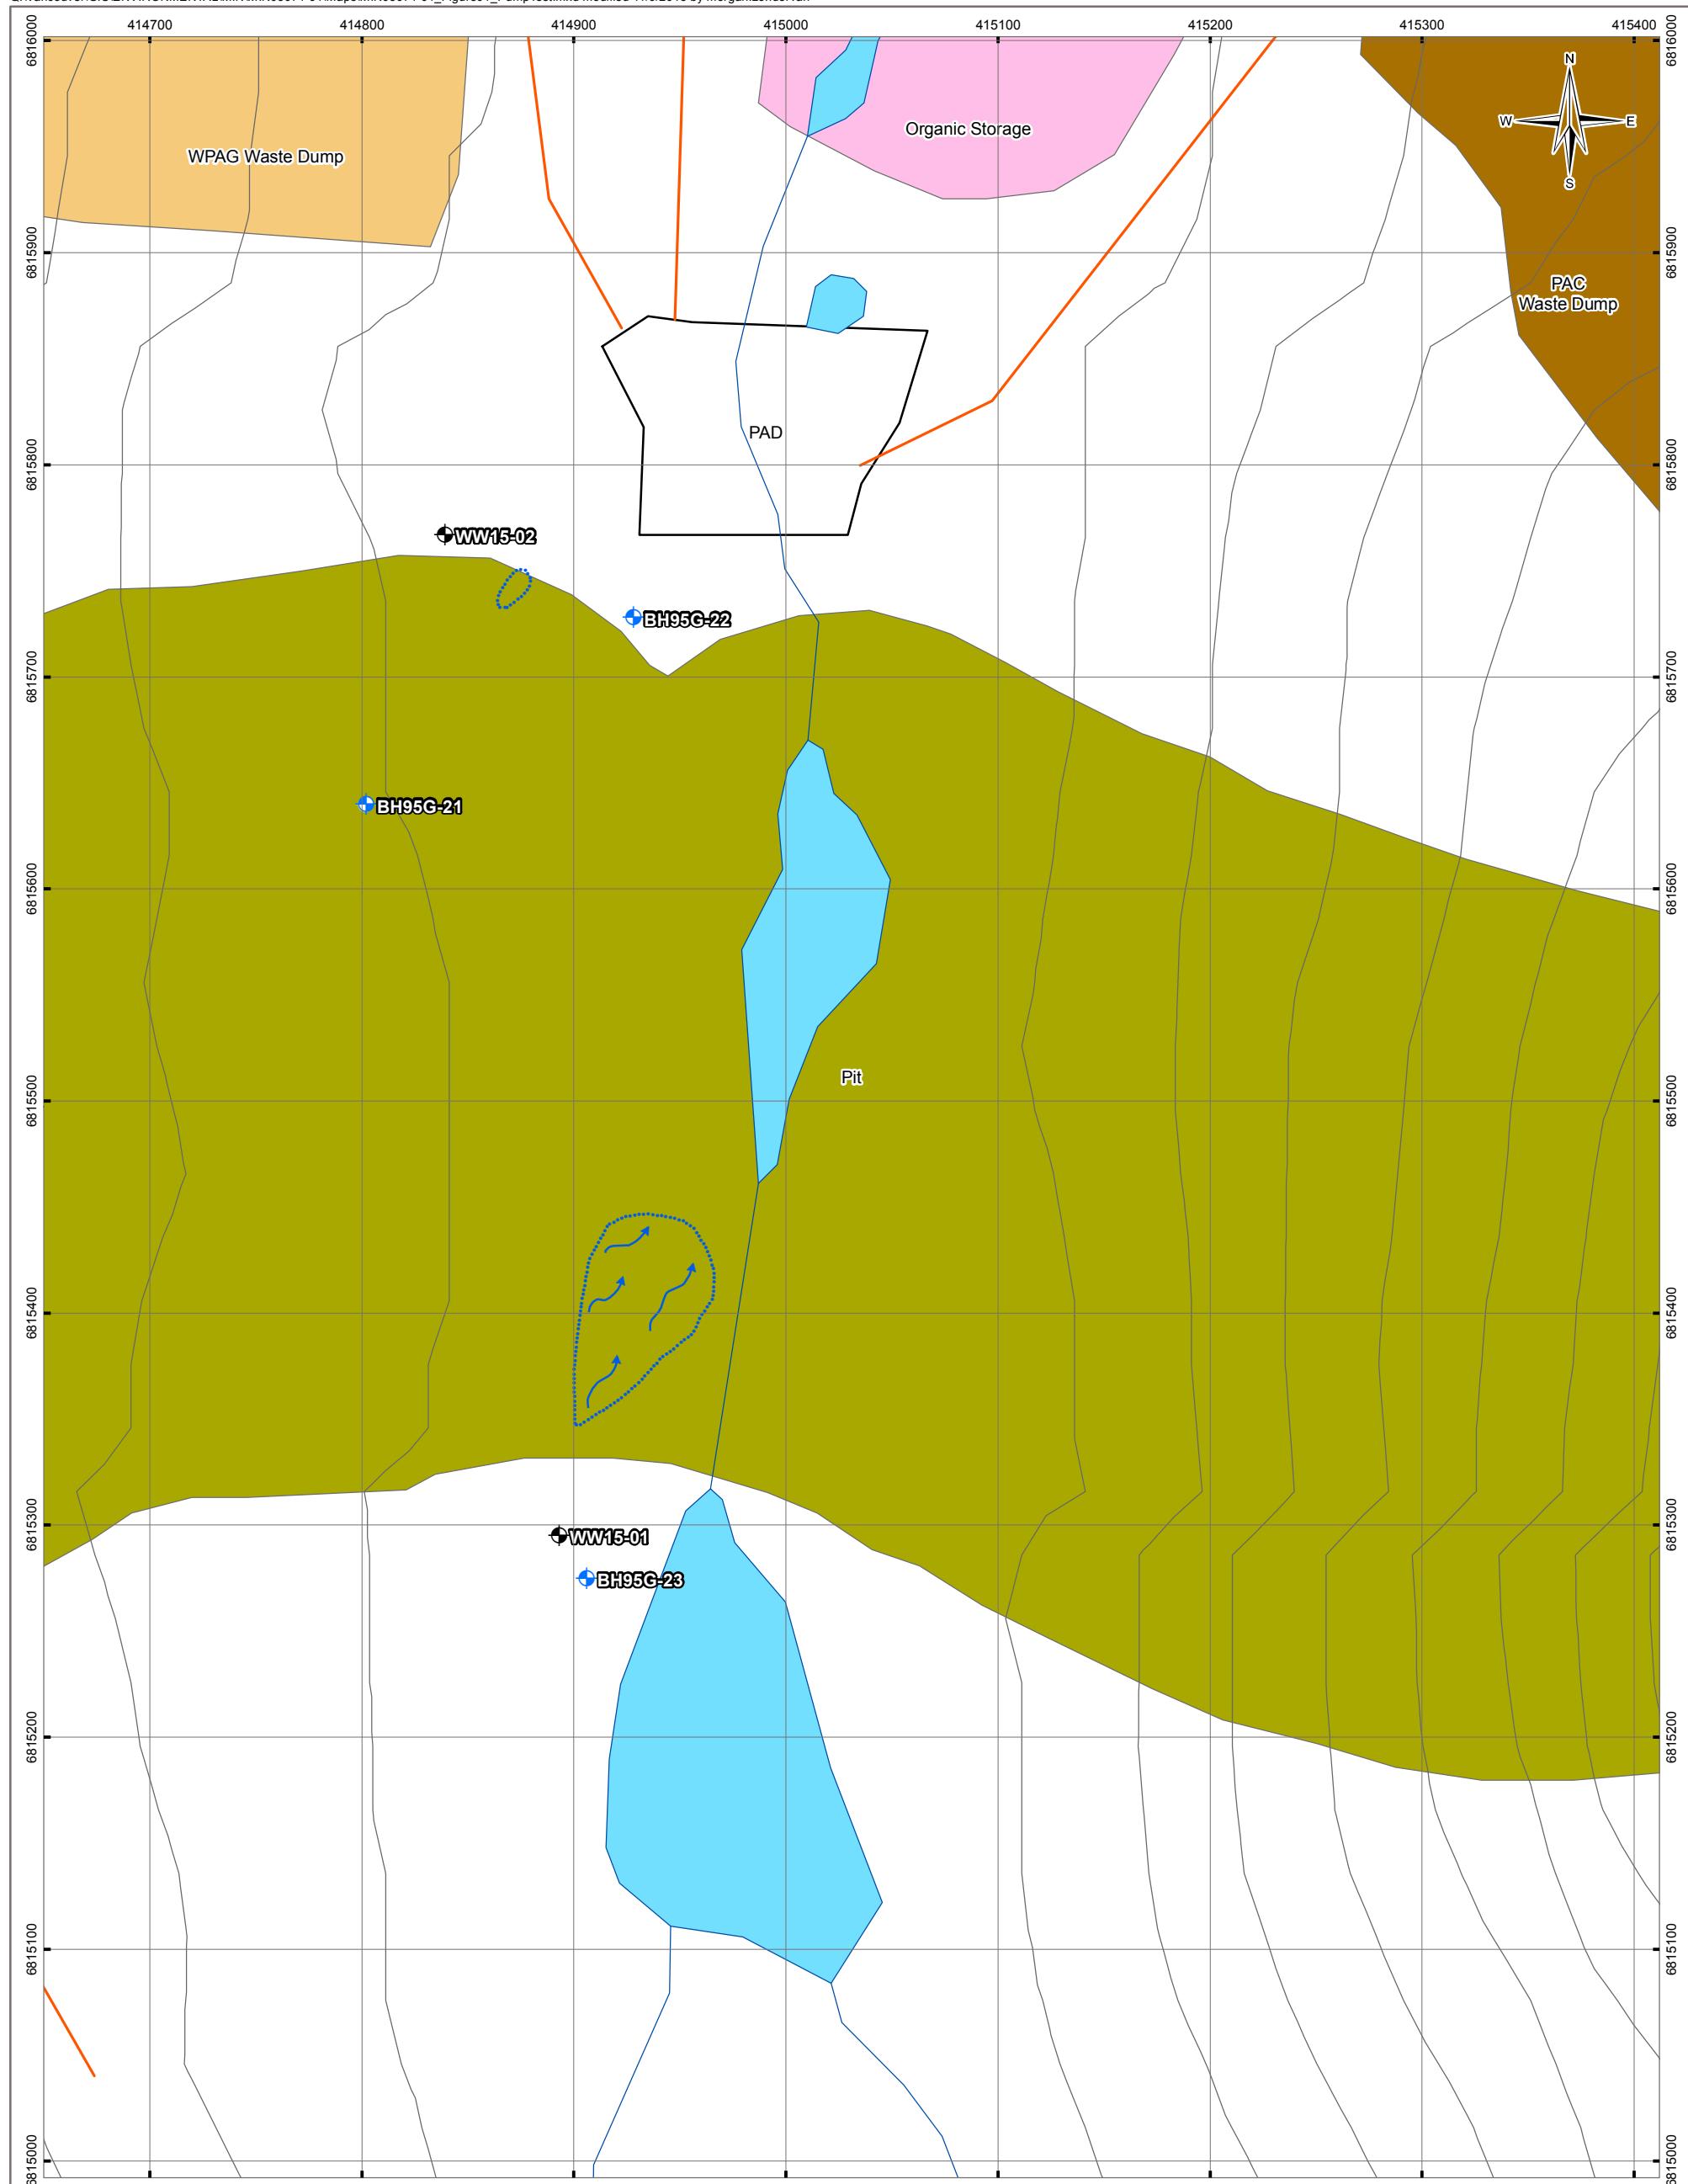

Electronic files submitted by Tetra Tech EBA have been prepared and submitted using specific software and hardware systems. Tetra Tech EBA makes no representation about the compatibility of these files with the Client's current or future software and hardware systems.

### 3.0 NOTIFICATION OF AUTHORITIES

In certain instances, the discovery of hazardous substances or conditions and materials may require that regulatory agencies and other persons be informed and the client agrees that notification to such bodies or persons as required may be done by Tetra Tech EBA in its reasonably exercised discretion.

### 4.0 INFORMATION PROVIDED TO TETRA TECH EBA BY OTHERS

During the performance of the work and the preparation of the report, Tetra Tech EBA may rely on information provided by persons other than the Client. While Tetra Tech EBA endeavours to verify the accuracy of such information when instructed to do so by the Client, Tetra Tech EBA accepts no responsibility for the accuracy or the reliability of such information which may affect the report.

Stable Ave. 148.0 0.0062

**Additional Comments:** No leaks from stuffing box - nevermind, very small leak (1 drip every 3 seconds)

\* Very very little flow, no return.

**Collar El.:** 1430 m  
**Trend:** 180 deg  
**Plunge:** -90 deg  
**Date:** 12-Aug-15

**Hole #:** MW15-02  
**Hole Size:** HQ  
**Design Test Interval:** 12.5 to 32 m  
**Test #:** 1

### Measurements

Depth to Water from Top of Stickup: 0.0 m toc  
 Top of Packer Interval: 12.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 32.00 m ah  
 Packer Inflation Pressure: 300 psi  
 Rod Stickup Height: 2.50 m ags  
 Water Flushed (Vol./Time Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 2.00 m ags  
 \* m ah - metres along hole

### Measurements

Depth to Water from Top of Stickup: 11.3 m toc  
 Top of Packer Interval: 22.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 30.00 m ah  
 Packer Inflation Pressure: 290 psi  
 Rod Stickup Height: 1.50 m ags  
 Water Flushed (Vol./Time Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.00 m ags  
 \* m ah - metres along hole

Stable Ave. 71.8  
 0.0221

**Additional Comments:** Recovery of rock very poor. Difficult to tell if rock is stable enough to hold packer. Asked driller to change configuration of flowmeter. Test has improved.

**Collar El.:** 1320 m  
**Trend:** 180 deg  
**Plunge:** -90 deg  
**Date:** 11-Aug-15

**Hole #:** MW15-10D  
**Hole Size:** HQ  
**Design Test Interval:** 28.5 to 33.0 m  
**Test #:** 1

### Measurements

Depth to Water from Top of Stickup: -0.2 m toc  
 Top of Packer Interval: 28.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 33.00 m ah  
 Packer Inflation Pressure: 350 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### FALLING HEAD TEST or RISING HEAD TEST

Hole #: MW15-10D  
Test #: 1

#### Calculation Input Parameters

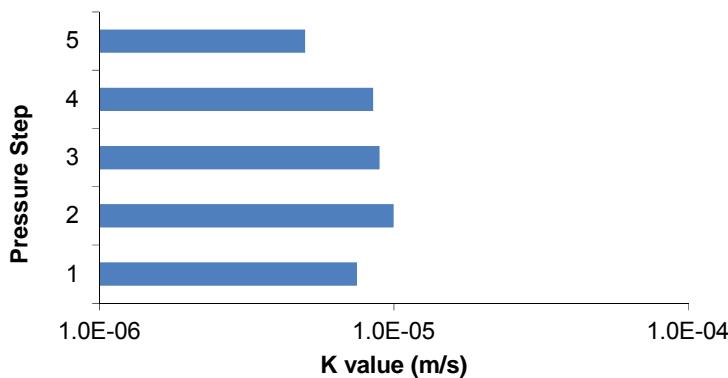

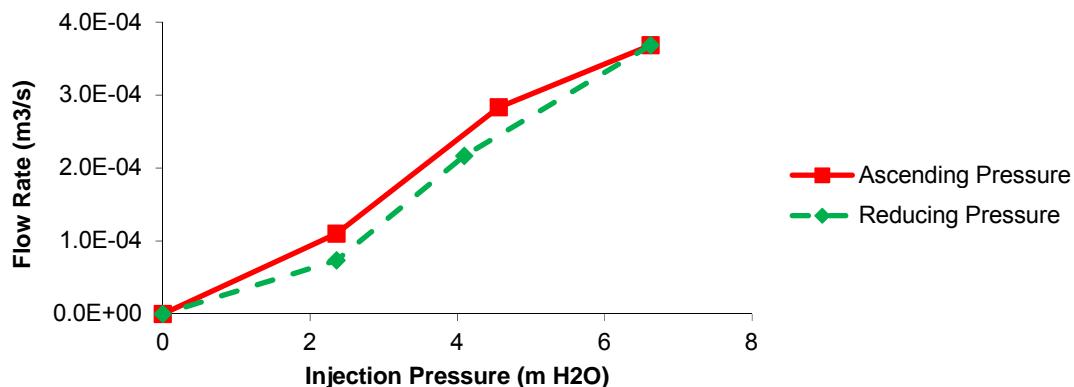

|   |        |
|---|--------|
| Top of Packer Test Interval (mah):      | 28.5   |
| Bottom of Packer Test Interval (mah):   | 33.0   |
| L: Length of Test Interval (mah)        | 4.5    |
| Test Interval Midpoint (mah):           | 30.8   |
| Stickup Height (mah):                   | 2.00   |
| Pressure Gauge Height (m above ground): | 1.50   |
| Depth to Water Table (mah):             | -0.20  |
| Borehole Diameter (mm):                 | 96.000 |
| r: Borehole Radius (m):                 | 0.048  |
| A: Angle From Horizontal (deg):         | -90    |

\* mah indicates "meters along hole"

$$K = \frac{Q \times \ln\left(\frac{L \sin(A)}{r}\right)}{2 \times \pi \times L \sin(A) \times dH}$$

| Pressure Step   | Pressure (psi) | Pressure (kPa) | Pressure (m of water) | Head Differential dH (m) | Flowrate Q (m³/s): | Hydraulic Conductivity K (m/s) |
|-----------------|----------------|----------------|-----------------------|--------------------------|--------------------|--------------------------------|

Stable Ave. 195.0 0.0000

**Additional Comments:** No flow. However rock above is fractured and incompetent. Would likely get flow, but may also damage packers as it is broken oxidized bedrock with many fractures from 14 to 17 m.

### Measurements

Depth to Water from Top of Stickup: 20.0 m toc  
 Top of Packer Interval: 21.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 35.00 m ah  
 Packer Inflation Pressure: 400 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

### Time

Start Flushing: 10:00 AM  
 End Flushing: 10:36 AM  
 Start Packer Testing:  
 End Packer Testing:

Stable Ave. 422.1 0.0012

**Additional Comments:** Clay seam about 15 cm thick at 76.5m, otherwise very competent rock to about 85.5m. Lots of thin fractures at about 85.5 to 87m.  
 Small leak at hose adaptor into stuffing box.

**Additional Comments:** Clay seams between 110 to 117m, swelled up and almost lost rods, driller recommended not doing a test in that zone so that they would not have to go through it twice.  
 Very competent beyond that point, no weathered zones or visible fractures. Full return. Little mud used during drilling, however were constrained to recycling the water from the sump, so no clear water for test, murky. No leaks.

**Collar El.:** 1458 m

## Measurements

Depth to Water from Top of Stickup: 30.0 m toc  
 Top of Packer Interval: 123.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 149.00 m ah  
 Packer Inflation Pressure: 550 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

## Time

| Start Flushing:       | 12:30 AM |
|-----------------------|----------|
| End Flushing:         | 1:00 AM  |
| Start Packer Testing: | 1:58 AM  |
| End Packer Testing:   | 2:35 AM  |

## FALLING HEAD TEST or RISING HEAD TEST

Stable Ave.

**Additional Comments:** Drillers lost return from 54 to 57m. No leaks. Took more than 10 minutes to fill rods (about 700L). Began test. Tried to get to 1st pressure but pump had blockage.  
 Bits of cement blocked one piston. Began test at 2:50.  
 Not able to reach design pressure; aborted test after 2nd pressure step.

Stable Ave. 725.0 0.0005

**Additional Comments:** Clay seam about 50 cm thick at 110.5 m. Few other clay rich fractures throughout (ranging from a few mm to a cm thick). Took over 1h to drill 111 to 114m run.

Only about 60 cm of core recovered, small rounded crumbs. Clay/fines all washed away, big fault. No return since about 50 m deep.

Fair leak at hose on sub @ 720kPa.

**Stable Ave.**

**Additional Comments:** Little mud used, only took a few minutes for the water to run clear. Took a long time to fill the rods with water. Could not do pressure intervals as ~100 kPa was the minimum pressure achieved. Packers remained inflated at 250 psi, no return through the casing nor leak at sub.

### Measurements

Depth to Water from Top of Stickup: 7.0 m toc  
 Top of Packer Interval: 9.00 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 19.50 m ah  
 Packer Inflation Pressure: 250 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

### Time

Start Flushing: 3:10 AM  
 End Flushing: 3:19 AM  
 Start Packer Testing: 4:23 AM  
 End Packer Testing: 4:32 AM

### FALLING HEAD TEST or RISING HEAD TEST

### Measurements

Depth to Water from Top of Stickup: 2.5 m toc  
 Top of Packer Interval: 64.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 75.00 m ah  
 Packer Inflation Pressure: 395 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

### Time

|                       |         |
|-----------------------|---------|
| Start Flushing:       | -       |
| End Flushing:         | 1:31 AM |
| Start Packer Testing: | 2:31 AM |
| End Packer Testing:   | 3:08 AM |

### FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H <sub>2</sub> O (m) | Δ Depth/Min |

### Measurements

Depth to Water from Top of Stickup: 2.5 m toc  
 Top of Packer Interval: 103.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 106.50 m ah  
 Packer Inflation Pressure: 400 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

### Time

Start Flushing: 2:20 PM  
 End Flushing: 2:28 PM  
 Start Packer Testing:  
 End Packer Testing:

**Test #:** 4

## Measurements

Depth to Water from Top of Stickup: 1.0 m toc  
 Top of Packer Interval: 127.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 138.00 m ah  
 Packer Inflation Pressure: 460 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

|                       |                                |
|-----------------------|--------------------------------|
| Volume:               | m³                             |
| Pressure:             | kPa (psi for packer inflation) |
| Length:               | m                              |
| Time                  | Very little mud used           |
| Start Flushing:       | 5:20 AM                        |
| End Flushing:         | 5:35 AM                        |
| Start Packer Testing: | 6:12 AM                        |
| End Packer Testing:   | 6:42 AM                        |

## FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H₂O (m) | Δ Depth/Min |
|------------|------------------|-------------|
| 0          |                  | -           |
| 1          |                  |             |
| 2          |                  |             |

**Additional Comments:**

Realized near the end of the test that the tank was full of mud. Redid the test, see file Analysis\_ABM16\_211.5m (2).xls

No return through the casing, small leak at sub and small leak top of sub.

## Measurements

Depth to Water from Top of Stickup: 0.0 m toc  
 Top of Packer Interval: 199.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 213.00 m ah  
 Packer Inflation Pressure: 610 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

## Time

Start Flushing: 8:42 PM  
 End Flushing: -  
 Start Packer Testing: 9:58 PM  
 End Packer Testing: 10:27 PM

## FALLING HEAD TEST or RISING HEAD TEST

## Measurements

Depth to Water from Top of Stickup: 0.0 m toc  
 Top of Packer Interval: 198.00 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 211.50 m ah  
 Packer Inflation Pressure: 610 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

## Time

Start Flushing: -  
 End Flushing: -  
 Start Packer Testing: 12:15 AM  
 End Packer Testing: 12:43 AM

Stable Ave. 110.7 0.0049

**Additional Comments:** Driller indicated fault at 23 and 26 m, although did not loose return. Crumbly stratified rock. 26 to 29m run took 1h to drill; very hard quartzite intrusions.

No mud used, quick rinse. Minimum pressure on flowmeter gauge is 40 kPa. Geotech's regulator was messed up, had to go get ours.

Shoot water out as the packers were deflating; mildly artesian condition?

Stable Ave. 677.5 0.0313

**Additional Comments:** Well producing water. Return through casing, but didn't raise water pressure. Drillers think its from fracture above drill bit.

**Hole #:** ABM46R (Relocated) / K15-242  
**Hole Size:** NQ  
**Design Test Interval:** 27.5 to 38 m  
**Test #:** 1

**Measurements** assume  
 Depth to Water from Top of Stickup: 20.0 m toc  
 Top of Packer Interval: 27.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 38.00 m ah  
 Packer Inflation Pressure: 350 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

**Measurement Units**  
 Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m  
**Time** No mud used, just flushing cuttings  
 Start Flushing: 9:00 AM  
 End Flushing: 9:10 AM  
 Start Packer Testing: 10:20 AM  
 End Packer Testing: 10:52 AM

### FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H <sub>2</sub> O (m) | Δ Depth/Min |
|------------|-------------------------------|-------------|
| 0          |                               | -           |
| 1          |                               |             |

| 15         |                               |             |
| 20         |                               |             |
| 25         |                               |             |
| 30         |                               |             |
| 40         |                               |             |
| 50         |                               |             |
| 60         |                               |             |

**Additional Comments:** No return through casing, no leaks from stuffing box. Finished first run at 9:00am. Set up packer began inflating; noticed issue. Pulled lines. Nitrogen line broke off.

Replaced fitting. Some problems again. Taped line. No issues. Delayed start.

Stable Ave. 420.0 0.0002

**Additional Comments:** Small leak at hose on sub. Regulator valve was shut, though not the N2 tank valve; packer initially inflated to 450psi, pressure slowly increased to 750psi until noticed  
 No damage.

**Hole #:** ABM46R (Relocated) / K15-242  
**Hole Size:** NQ  
**Design Test Interval:** 69.5 to 86m  
**Test #:** 2

**Measurements** assume  
 Depth to Water from Top of Stickup: 18.0 m toc  
 Top of Packer Interval: 69.50 m ah\*

Bottom of Packer Interval (or Bottom of Hole): 86.00 m ah

Packer Inflation Pressure: 600 psi  
 Rod Stickup Height: 2.00 m ags

Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID or Drill Rod ID (circle one):

Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags

\* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

**Time** No mud used, just flushing cuttings  
 Start Flushing: 9:55 PM  
 End Flushing: 10:05 PM  
 Start Packer Testing: 10:52 PM  
 End Packer Testing: 10:34 PM

## FALLING HEAD TEST or RISING HEAD TEST

**Hole #:** ABM46R (Relocated) / K15-242  
**Hole Size:** NQ  
**Design Test Interval:** 117.5 to 125 m  
**Test #:** 3

**Measurements** assume  
 Depth to Water from Top of Stickup: 16.0 m toc  
 Top of Packer Interval: 117.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 125.00 m ah  
 Packer Inflation Pressure: 400 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

**Measurement Units**  
 Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m  
**Time** No mud used, just flushing cuttings  
 Start Flushing: 9:00 AM  
 End Flushing: 9:15 AM  
 Start Packer Testing: 9:55 AM  
 End Packer Testing: 10:30 AM

**Hole #:** ABM46R (Relocated) / K15-242  
**Hole Size:** NQ  
**Design Test Interval:** 132.5 to 161  
**Test #:** 4

**Measurements** assume  
 Depth to Water from Top of Stickup: 12.0 m toc  
 Top of Packer Interval: 132.50 m ah\*

Bottom of Packer Interval (or Bottom of Hole): 161.00 m ah

Packer Inflation Pressure: 425 psi

Rod Stickup Height: 2.00 m ags

Water Flushed (Vol./Time/Until Clean):

Packer Pipe ID or Drill Rod ID (circle one):

Borehole Outside Diameter: 76 mm

Vertical height of gauge above ground: 1.50 m ags

\* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

**Time** No mud used, just flushing cuttings

Start Flushing: 9:55 PM

End Flushing: -

Start Packer Testing: 12:23 AM

End Packer Testing: 12:58 AM

## FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H <sub>2</sub> O (m) | Δ Depth/Min |
|------------|-------------------------------|-------------|
| 0          |                               | -           |

**Hole #:** ABM50 / K15-248  
**Hole Size:** HQ  
**Design Test Interval:** 46.5 to 52.5 m  
**Test #:** 1

### Measurements

Depth to Water from Top of Stickup: 33.5 m toc  
 Top of Packer Interval: 46.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 52.50 m ah  
 Packer Inflation Pressure: 320 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

**Time** No mud used, just flushing cuttings  
 Start Flushing: -  
 End Flushing: -  
 Start Packer Testing: 9:00 PM  
 End Packer Testing: 9:32 PM

### FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H <sub>2</sub> O (m) | Δ Depth/Min |
|------------|-------------------------------|-------------|
| 0          |                               | -           |
| 1          |                               |             |
| 2          |                               |             |
| 4          |                               |             |
| 6          |                               |             |
| 8          |                               |             |
| 10         |                               |             |
| 15         |                               |             |
| 20         |                               |             |
| 25         |                               |             |
| 30         |                               |             |
| 40         |                               |             |
| 50         |                               |             |
| 60         |                               |             |

**Additional Comments:** No return while drilling since start of hole. Return when flushing the hole though. Very crumbly, clay rich fractures ranging from mm to about 1dm thick. Quartz seams. Casing advanced to 18m, competent rock starting at ~24m.  
 Triple packer with 4X 1.5m extension = 6m interval.

Hole #: ABM50 / K15-248  
 Test #: 1

#### Calculation Input Parameters

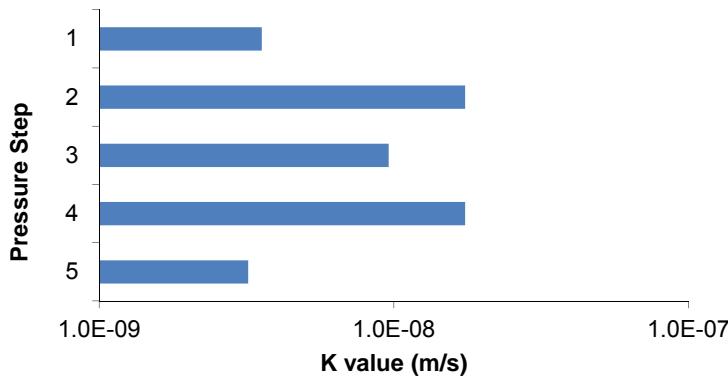

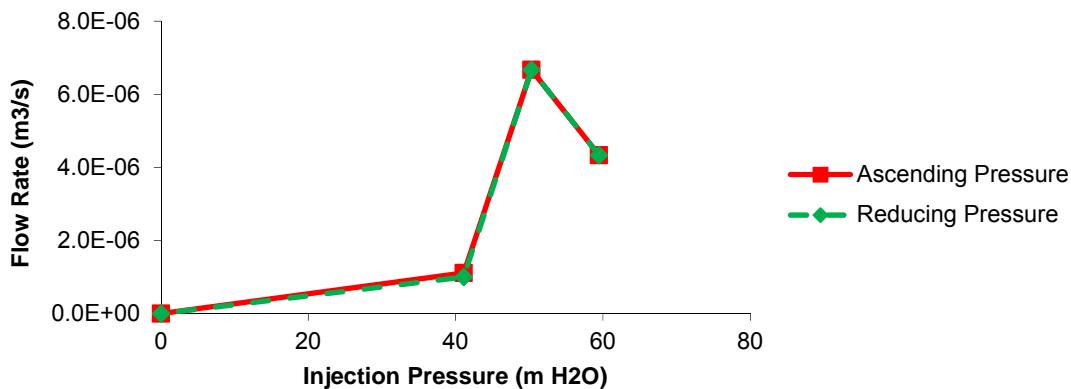

|   |        |
|---|--------|
| Top of Packer Test Interval (mah):      | 46.5   |
| Bottom of Packer Test Interval (mah):   | 52.5   |
| L: Length of Test Interval (mah)        | 6.0    |
| Test Interval Midpoint (mah):           | 49.5   |
| Stickup Height (mah):                   | 2.00   |
| Pressure Gauge Height (m above ground): | 1.50   |
| Depth to Water Table (mah):             | 33.50  |
| Borehole Diameter (mm):                 | 96.000 |
| r: Borehole Radius (m):                 | 0.048  |
| A: Angle From Horizontal (deg):         | -75    |

\* mah indicates "meters along hole"

## Measurements

Depth to Water from Top of Stickup: 18.5 m toc  
 Top of Packer Interval: 169.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 175.50 m ah  
 Packer Inflation Pressure: 550 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean): 30  
 Packer Pipe ID or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

## Time

Start Flushing: -  
 End Flushing: -  
 Start Packer Testing:  
 End Packer Testing:

**Design Test Interval:** 226.5 to 240 m  
**Test #:** 3

## Measurements

Depth to Water from Top of Stickup: 10.0 m toc  
 Top of Packer Interval: 226.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 240.00 m ah  
 Packer Inflation Pressure: 600 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

## Time

Start Flushing: 10:27 AM  
 End Flushing: 11:00 AM  
 Start Packer Testing: 11:45 AM  
 End Packer Testing: 12:10 PM

## FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H <sub>2</sub> O (m) | Δ Depth/Min |
|------------|-------------------------------|-------------|
| 0          |                               | -           |
| 1          |                               |             |
| 2          |                               |             |
| 4          |                               |             |
| 6          |                               |             |
| 8          |                               |             |
| 10         |                               |             |
| 15         |                               |             |
| 20         |                               |             |
| 25         |                               |             |
| 30         |                               |             |
| 40         |                               |             |
| 50         |                               |             |
| 60         |                               |             |

**Additional Comments:** Packers holding pressure, no leaks from stuffing box. Difficult to reach min p, increased packers pressure to 600psi. Packer was holding pressure but flow decreased.

Packer was likely leaking for first pressure step - do not use for analysis.

Hole #: ABM50 / K15-248  
 Test #: 3

#### Calculation Input Parameters

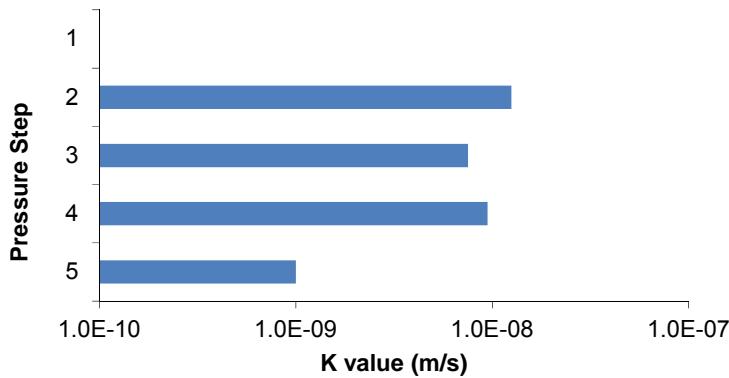

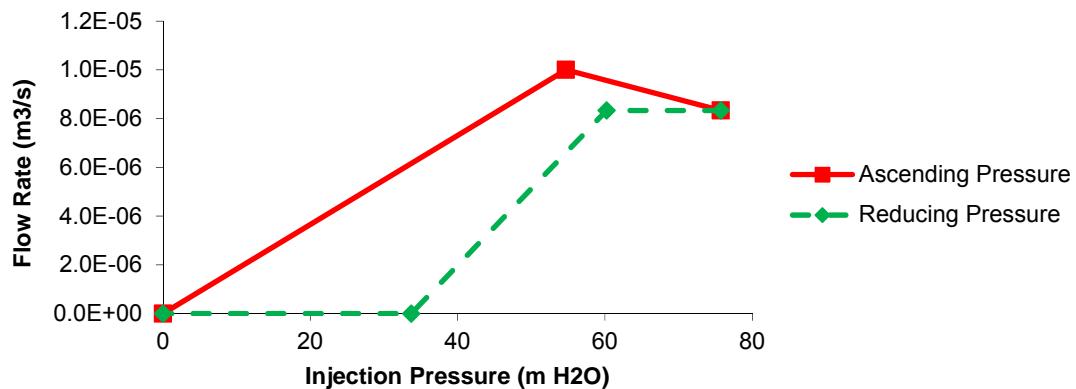

|   |        |
|---|--------|
| Top of Packer Test Interval (mah):      | 226.5  |
| Bottom of Packer Test Interval (mah):   | 240.0  |
| L: Length of Test Interval (mah)        | 13.5   |
| Test Interval Midpoint (mah):           | 233.3  |
| Stickup Height (mah):                   | 2.00   |
| Pressure Gauge Height (m above ground): | 1.50   |
| Depth to Water Table (mah):             | 10.00  |
| Borehole Diameter (mm):                 | 96.000 |
| r: Borehole Radius (m):                 | 0.048  |
| A: Angle From Horizontal (deg):         | -75    |

\* mah indicates "meters along hole"

$$K = \frac{Q \times \ln\left(\frac{L \sin(A)}{r}\right)}{2 \times \pi \times L \sin(A) \times dH}$$

**Hole #:** ABM50 / K15-248  
**Hole Size:** HQ  
**Design Test Interval:** 244.5 - 279 m  
**Test #:** 4

## Measurements

Depth to Water from Top of Stickup: 8.0 m toc  
 Top of Packer Interval: 244.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 279.00 m ah  
 Packer Inflation Pressure: 625 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 96 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

**Time** No mud used, just flushing cuttings  
 Start Flushing: -  
 End Flushing: ~ 45 min  
 Start Packer Testing: 5:15 AM  
 End Packer Testing: 5:48 AM

## FALLING HEAD TEST or RISING HEAD TEST

| Time (Min) | Depth to H <sub>2</sub> O (m) | Δ Depth/Min |

## Measurements

Depth to Water from Top of Stickup: 30.0 m toc  
 Top of Packer Interval: 70.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 90.00 m ah  
 Packer Inflation Pressure: 400 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean):  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

**Hole #:** ABM51R / K15-265  
**Hole Size:** NQ  
**Design Test Interval:** 133.5 - 153  
**Test #:** 2

**Measurements** assume  
 Depth to Water from Top of Stickup: 25.0 m toc  
 Top of Packer Interval: 133.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 153.00 m ah  
 Packer Inflation Pressure: 450 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean): 15 min  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

**Time** No mud used, just washing cuttings  
 Start Flushing: 9:45 AM  
 End Flushing: 10:00 AM  
 Start Packer Testing: 10:25 AM  
 End Packer Testing: 10:55 AM

## FALLING HEAD TEST or RISING HEAD TEST

**Hole #:** ABM51R / K15-265  
**Hole Size:** NQ  
**Design Test Interval:** 190.5 - 201  
**Test #:** 3

**Measurements** assume  
 Depth to Water from Top of Stickup: 20.0 m toc  
 Top of Packer Interval: 190.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 201.00 m ah  
 Packer Inflation Pressure: 500 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean): 15  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.50 m ags  
 \* m ah - metres along hole

### Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

### Time

Start Flushing: 9:55 PM  
 End Flushing: 10:10 PM  
 Start Packer Testing: 10:30 PM  
 End Packer Testing: 11:00 PM

### FALLING HEAD TEST or RISING HEAD TEST

Stable Ave. 680.0 0.0004

**Additional Comments:** Last 10 m of core quite fractured. Otherwise, last 50 m of hole very competent rock. Fractures didn't have gouge so assumed they would take water but no.

**Collar El.:** 1424 m  
**Trend:** 180 deg  
**Plunge:** -55 deg  
**Date:** 21-Sep-15

**Hole #:** ABM51R / K15-265  
**Hole Size:** NQ

**Measurements** assume  
 Depth to Water from Top of Stickup: 10.0 m toc  
 Top of Packer Interval: 271.50 m ah\*  
 Bottom of Packer Interval (or Bottom of Hole): 285.00 m ah  
 Packer Inflation Pressure: 550 psi  
 Rod Stickup Height: 2.00 m ags  
 Water Flushed (Vol./Time/Until Clean): 20  
 Packer Pipe ID/ or Drill Rod ID (circle one):  
 Borehole Outside Diameter: 76 mm  
 Vertical height of gauge above ground: 1.00 m ags  
 \* m ah - metres along hole

## Measurement Units

Volume: m<sup>3</sup>  
 Pressure: kPa (psi for packer inflation)  
 Length: m

## Time

Start Flushing: 5:00 AM  
 End Flushing: 5:20 AM  
 Start Packer Testing: 8:00 AM  
 End Packer Testing: 8:37 AM

## FALLING HEAD TEST or RISING HEAD TEST

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(2) TOC present in the sample should be considered as non-purgeable TOC.

**GENERAL COMMENTS**

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 8.0°C |
| Package 2 | 5.3°C |
| Package 3 | 4.3°C |

Samples MG3099, MG3101, MG3103, MG3105, MG3107, MG3109, MG3111, MG3113, MG3116 & MG3127 bottles field preserved for Low Level N + N.

Revised report V2: Updated Client sample IDs for MG3112 and MG3113 per client request (MM4).

Revised report (V3): Client ID corrected per client request for samples MG3106 and MG3107 (MM4).

Sample MG3099-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3101-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3103-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3105-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3107-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3109-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3111-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3113-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3116-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

Sample MG3127-01 : Sample preserved in the field by client to prolong hold time for Nitrate plus Nitrite. Reported detection limit (RDL) for preserved N&N has not been established at this concentration. Results less than 0.02mg/L should be used with caution and are not suitable for compliance purposes.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

(2) BLANK outside acceptance criteria, detection limit adjusted accordingly

Maxxam Job #: B540423  
Report Date: 2016/01/19

TETRATECH EBA  
Client Project #: ENVMIN03071-01

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Calgary Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

| 7997040  | Dissolved Chloride (Cl)  | 2015/08/10 | 116          | 80 - 120  | 103          | 80 - 120  | <0.50        | mg/L  | 6.5       | 20        |
| 7997044  | Dissolved Sulphate (SO4) | 2015/08/10 |              |           | 95           | 80 - 120  | <0.50        | mg/L  |           |           |
| 7999241  | Total Organic Carbon (C) | 2015/08/12 | NC           | 80 - 120  | 95           | 80 - 120  | <0.50        | mg/L  | 8.5       | 20        |

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RDVs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Edmonton Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample analysed past recommended hold time.

(3) Sample arrived to laboratory past recommended hold time.

#### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 7.7°C |
| Package 2 | 7.3°C |

Sample MW4352-01 : Total Phosphorus is less than dissolved Phosphorus; Re-analysis yields similar results.

Sample MW4351, Elements by ICPMS Low Level (dissolved): Test repeated.

**Results relate only to the items tested.**

| QC Batch | Parameter                | Date       | Matrix Spike |           | Spiked Blank |           | Method Blank |       | RPD       |           |
|----------|--------------------------|------------|--------------|-----------|--------------|-----------|--------------|-------|-----------|-----------|
|          |                          |            | % Recovery   | QC Limits | % Recovery   | QC Limits | Value        | UNITS | Value (%) | QC Limits |
| 8007960  | Dissolved Phosphorus (P) | 2015/08/19 |              |           |              |           | <0.0020      | mg/L  |           |           |

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

### CERTIFICATE OF ANALYSIS – REVISED REPORT

**MAXXAM JOB #:** B569978

**Received:** 2015/08/14, 13:00

Sample Matrix: Water  
# Samples Received: 3

| Analyses  | Quantity | Date Extracted | Date Analyzed | Laboratory Method | Analytical Method |
|-----------|----------|----------------|---------------|-------------------|-------------------|
| Turbidity | 3        | N/A            | 2015/08/15    | BBY6SOP-00027     | SM 22 2130 B m    |

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Edmonton Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

#### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 5.7°C |
|-----------|-------|

Revised report (V2): Client ID corrected per client request for samples MW8217 and MW8218 (MM4).

Sample MW8218-01 : Revised report V2: Updated Client Sample ID for MW8217 and MW8218 per client request (MM4)

Sample MW8217, Elements by ICPMS Low Level (dissolved): Test repeated.

Sample MW8218, Elements by ICPMS Low Level (dissolved): Test repeated.

**Results relate only to the items tested.**

|----------|------------------------|------------|--------------|-----------|--------------|-----------|--------------|-------|-----------|-----------|
|          |                        |            | % Recovery   | QC Limits | % Recovery   | QC Limits | Value        | UNITS | Value (%) | QC Limits |
| 8013419  | Dissolved Lithium (Li) | 2015/08/26 | NC           | 80 - 120  | 102          | 80 - 120  | <0.00050     | mg/L  |           |           |

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Sample analysed past hold time: sample was received on the hold time expiry date which did not allow sufficient time for preparation and analysis.

(2) RDL raised due to sample matrix interference.

## CERTIFICATE OF ANALYSIS

**MAXXAM JOB #: B572767**

**Received: 2015/08/24, 09:50**

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Edmonton Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Calgary Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample analysed past hold time: sample was received on the hold time expiry date which did not allow sufficient time for preparation and analysis.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 9.3°C |
|-----------|-------|

Sample NB5023-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

**Results relate only to the items tested.**

## QUALITY ASSURANCE REPORT(CONT'D)

TETRATECH EBA  
Client Project #: ENVMINO3071-01  
Site Location: KUDZ ZE KAYAH

| QC Batch | Parameter            | Date       | Matrix Spike |           | Spiked Blank |           | Method Blank |       | RPD       |           |
|----------|----------------------|------------|--------------|-----------|--------------|-----------|--------------|-------|-----------|-----------|
|          |                      |            | % Recovery   | QC Limits | % Recovery   | QC Limits | Value        | UNITS | Value (%) | QC Limits |
| 8037263  | Total Phosphorus (P) | 2015/09/12 |              |           | 97           | 80 - 120  | <0.0020      | mg/L  |           |           |

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

(2) Blank Spike for (Aluminum) outside acceptance criteria (10% of analytes failure allowed).

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Calgary Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Calgary Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

N/A = Not Applicable

(1) Sample arrived to laboratory past recommended hold time.

(2) Sample analysed past hold time: sample was received on the hold time expiry date which did not allow sufficient time for preparation and analysis.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

## GENERAL COMMENTS

Revised report V2: Updated Client sample IDs for NB8923, NB8925 and NB8929 per client request (MM4).

Sample NB8922-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8924-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8925-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8926-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8927-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8928-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8929-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn. Ionic imbalance out of optimal range due to high level of iron which may precipitate out over time and affect the results for alkalinity.

Sample NB8930-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NB8931-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

### LL TOTAL METALS (DIGESTED) WITH CV HG Comments

Sample NB8924-06 Elements by ICPMS Digested LL (total): RDL raised due to sample matrix interference.

Sample NB8925-06 Elements by ICPMS Digested LL (total): RDL raised due to sample matrix interference.

Sample NB8928-06 Elements by ICPMS Digested LL (total): RDL raised due to sample matrix interference.

Sample NB8923, Elements by ICPMS Low Level (dissolved): Test repeated.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Blank Spike for (Aluminum) outside acceptance criteria (10% of analytes failure allowed).

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Calgary Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

RDL raised due to sample dilution.

(3) Sample arrived to laboratory past recommended hold time.

#### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 6.3°C |
|-----------|-------|

Revised report V2: Updated Client sample ID for NC5342, per client request (MM4).

Sample NC5341-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NC5342-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NC5343-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NC5342, Elements by ICPMS Low Level (dissolved): Test repeated.

Sample NC5343, Elements by ICPMS Low Level (dissolved): Test repeated.

**Results relate only to the items tested.**

| 8042609  | Dissolved Selenium (Se) | 2015/09/18 | 94           | 80 - 120  | 91           | 80 - 120  | <0.000040    | mg/L  | NC        | 20        |

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Calgary Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 2.7°C |
| Package 2 | 3.0°C |

Revised report V2: Updated Client sample ID for NF4901, per client request (MM4).

Revised report V3: Updated client ID for samples NF4895 and NF4896 per client request (MM4).

Sample NF4894-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NF4897-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NF4900-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NF4901-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

## CERTIFICATE OF ANALYSIS

**MAXXAM JOB #: B588975**

**Received: 2015/10/08, 13:30**

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) This test was performed by Maxxam Edmonton Environmental

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(3) TOC present in the sample should be considered as non-purgeable TOC.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

### CERTIFICATE OF ANALYSIS

**MAXXAM JOB #:** B590273

**Received:** 2015/10/13, 10:00

Sample Matrix: Water  
# Samples Received: 1

| Analyses  | Date<br>Quantity | Date<br>Extracted | Date<br>Analyzed | Laboratory Method | Analytical Method |
|-----------|------------------|-------------------|------------------|-------------------|-------------------|
| Turbidity | 1                | N/A               | 2015/10/16       | BBY6SOP-00027     | SM 22 2130 B m    |

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(2) TOC present in the sample should be considered as non-purgeable TOC.

#### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 3.7°C |
|-----------|-------|

Sample NJ3446-01 : Turbidity analyzed past recommended hold time.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(2) TOC present in the sample should be considered as non-purgeable TOC.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time; RDL raised due to sample dilution.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time, RDL raised due to sample dilution.

(3) Sample arrived to laboratory past recommended hold time.

RDL = Reportable Detection Limit

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

(3) Sample arrived to laboratory past recommended hold time, RDL raised due to sample dilution.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 4.7°C |
| Package 2 | 4.3°C |

Sample NO7325-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7326-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7327-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7328-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7329-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7330-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7331-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7332-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7333-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7334-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NO7341-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

**Results relate only to the items tested.**

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) Recovery or RPD for this parameter is outside control limits. The overall quality control for this analysis meets acceptability criteria.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(2) TOC present in the sample should be considered as non-purgeable TOC.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) RDL raised due to high concentration of solids in the sample.

(2) Sample arrived to laboratory past recommended hold time.

RDL = Reportable Detection Limit

(1) Dissolved greater than total. Reanalysis yields similar results.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

### CERTIFICATE OF ANALYSIS

**MAXXAM JOB #: B5A0448**

Received: 2015/11/10, 09:20

Sample Matrix: Water  
# Samples Received: 1

| Analyses  | Date<br>Quantity | Date<br>Extracted | Date<br>Analyzed | Laboratory Method | Analytical Method |
|-----------|------------------|-------------------|------------------|-------------------|-------------------|
| Turbidity | 1                | N/A               | 2015/11/10       | BBY6SOP-00027     | SM 22 2130 B m    |

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(2) TOC present in the sample should be considered as non-purgeable TOC.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

| Turbidity                        | 2        | N/A            | 2015/11/09    | BBY6SOP-00027     | SM 22 2130 B m    |

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDS calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

(2) TOC present in the sample should be considered as non-purgeable TOC.

**GENERAL COMMENTS**

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 5.0°C |
|-----------|-------|

Sample NP1435-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NP1436-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NP1437-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample NP1438-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

**Results relate only to the items tested.**

Sampler Initials: ER

| QC Batch | Parameter          | Date       | Matrix Spike |           | Spiked Blank |           | Method Blank |       | RPD       |           |
|----------|--------------------|------------|--------------|-----------|--------------|-----------|--------------|-------|-----------|-----------|
|          |                    |            | % Recovery   | QC Limits | % Recovery   | QC Limits | Value        | UNITS | Value (%) | QC Limits |
| 8110996  | Total Nitrogen (N) | 2015/11/12 | 87           | 80 - 120  | 94           | 80 - 120  | <0.020       | mg/L  | 7.9       | 20        |

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) DOC present in the sample should be considered as non-purgeable DOC.

(2) The BC-MOE and APHA Standard Method require pH to be analysed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the BC-MOE/APHA Standard Method holding time.

RDL = Reportable Detection Limit

N/A = Not Applicable

(1) Sample arrived to laboratory past recommended hold time.

(2) Detection limits raised due to dilution to bring analyte within the calibrated range.

RDL = Reportable Detection Limit

(1) RDL raised due to sample matrix interference. Sample analysed past hold time: sample was received on the hold time expiry date which did not allow sufficient time for preparation and analysis.

(2) RDL raised due to high concentration of solids in the sample.

(3) RDL raised due to high concentration of solids in the sample. Sample arrived to laboratory past recommended hold time.

(4) Sample analysed past hold time: sample was received on the hold time expiry date which did not allow sufficient time for preparation and analysis.

(5) Sample arrived to laboratory past recommended hold time.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

N/A = Not Applicable

(1) Sample arrived to laboratory past recommended hold time.

(2) RDL raised due to high concentration of solids in the sample.

(3) RDL raised due to sample matrix interference. Sample arrived to laboratory past recommended hold time.

RDL = Reportable Detection Limit

Lab-Dup = Laboratory Initiated Duplicate

(1) Sample arrived to laboratory past recommended hold time.

(2) Detection limits raised due to dilution to bring analyte within the calibrated range.

(3) RDL raised due to sample matrix interference. Sample analysed past hold time: sample was received on the hold time expiry date which did not allow sufficient time for preparation and analysis.

### GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

|           |       |
|-----------|-------|
| Package 1 | 4.7°C |
| Package 2 | 4.3°C |
| Package 3 | 5.7°C |

Sample OH9401-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9402-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9403-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9404-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9405-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9406-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9407-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9409-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9410-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9411-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9412-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9413-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9414-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9415-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9418-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.

Sample OH9419-01 : Sample analyzed for digested low level metals due to sediment in sample. This results in an increased reportable detection limit for Al B Ba Bi Cr Co Cu Fe Mn Ni P Pb Sb Si Ti U V and Zn.
