

REPORT ON THE 1993
PROSPECTING AND GEOCHEMICAL WORK IN
THE ENGLISHMAN RANGE (TESLIN MAP AREA)
AND JOJO LAKE (KUSAWA LAKE MAP AREA)

YMIP # 93-082 IVAN ELASH

LOCATIONS

#1 - 45 KM. N.E. OF TESLIN YUKON
N.T.S. 105 C/8&9
LONGITUDE 132°15' WEST
LATITUDE 60° 30' NORTH

#2 - 80 KM. W.S.W. OF WHITEHORSE, YUKON
N.T.S. 115 A/9
LONGITUDE 136° 18' WEST
LATITUDE 60° 35' NORTH

INTRODUCTION

Prospecting work consisted of stream silt sampling, soil and rock sampling and prospecting. The work was carried out between May 27 and July 25, 1993. The Wolf River area was worked with Harry Kern, JoJo Lake work was completed by myself.

LOCATION AND ACCESS

Location number 1 is located near the Wolf River, in the Thirty Mile and Englishman Ranges, approximately 46 km. Northeast of Teslin, Yukon. The center of the project area is at approximately 60°30' North latitude and 132°15' West longitude within map area 105 C/8 & 9.

Access to the area is via float plane from Teslin to Fish Lake which is approximately 16 km's up river from the center of the project area. A canoe was used to move camps down the Wolf River to access the work areas.

Location number 2 is located Northwest of Kusawa Lake in the Coastal Mountain Range also known as the Yukon Plateau. The area is approximately 80 km. W.S.W. of Whitehorse. The center of the project area is at approximately 60°35' North latitude and 136°18' West longitude within map area 115 A/9.

Access to the area was by float plane from Whitehorse to JoJo Lake. An inflatable and 4 hp. motor were used to access different work areas around the lake.

PROPERTY

The Wolf River area is completely staked over.
~~There has not been any claims staked within the project area. There are currently no active mining claims in either area.~~ Parts of both locations are currently withdrawn from staking under the provisions of the Yukon Land Claims Agreement.

REGIONAL GEOLOGY

The geology of the Teslin map area was described by Mulligan 1963 and the area is currently being remapped by the G.S.C. (Gordy, 1992). The area is part of the Ominica Belt of the West Cordillera. Terranes represented in this part of Teslin map area include the pericratonic Nisultlin terrane and the accreted Slide Mountain and Dorsey terranes (Wheeler and McFeely, 1988). Recent work by Gordy (1992) indicates that rocks assigned to the Dorsey terrane bear similarities to North American margin strata. The presence of Mississippian age volcanics and block faulting is in keeping with Devono-Mississippian tectonism elsewhere along the North American margin.

Intrusive platonitic rocks in the area are predominantly early Cretaceous granites to syenite and non-zonite with a few Jurassic or Cretaceous peridotite and pyroxenite bodies found Northeast of the Thirtymile and Englishman Ranges.

The geology of the JoJo Lake area within Dezadeash map area 115A. The Yukon Plateau includes a wide variety of schists and gneisses derived from sedimentary strata, as well as some hornblende chlorite schists of probable volcanic origin. These rocks are probably, in large part, of the precambrian age, but may include some altered Palaeozoic rocks.

CONCLUSIONS AND RECOMMENDATIONS

Prospecting and geochemical sampling in the Englishmans and Thirtymile Ranges was completed by Ivan Elash and Harry Kern, under a prospecting grant provided by the Yukon Mining Incentive Program. This area is N E of Teslin, Yukon. The work here was follow up to the 1992 prospecting season, we ~~WERE~~ could not substantiate yhe results of the previous year. The area has subsequently been staked by Cominco, they obviously found something that we missed. The area is underlain by limestone and argillaceous quartzite and phylites of the Englishmans Group (Mulligan 1963) but which may actually be part of the Earn Group stratigraphy (Gordy 1992). Rock samples containing anomalous gold also contain anomalous Pb, Zn, Cd, Ca, Fe, and W which suggest the presence of skarn mineralization. The presence of thin but pervasive quartz-carbonate veining in the areas containing the anomalous gold in rock samples may indicate another mineralized system in the area. There is no point in returning to the area according to Al Doherty, Aurum Geological, Whitehorse, Yukon.

The work in the Jo Jo Lake area, W S W of Whitehorse, Yukon, resulted with anomalous readings on the west side of the lake and fairly close to Land Claims. The area is on a granitic intrusion vdry massive in size. Faulting is apparent on yhe east and west sides of the lake. Sampling of silts, soil and rocks was carried out extensively on yhe east side of the lake, and no anomalous readings arose. I will not return to this area until Land Claims have been settled or an agreement can be made with natives on access to their land.
