The following is a summary of my prospecting activity for 2000 Mr Gord Richards was a co-applicant on this program

Day	Date	Activity
	June 16	mob to Dawson City Sort gear and supplies
1	17	fly to Scroggie Ck. Located claim posts.
2	18	Stake Rum Run 21-40
3	19	Sample Pyroxene Mt
4	20	Sample Stevens Ck
5	21	Sample Stevens Ck
6	22	Sample Upper Scroggie
7	23	Stake Rum Run 41-50, 53-59
	24	Target Evaluation Scroggie. Demob Dawson.
8	25	ATV to Summit L. Sample
9	26	Sample Summit L.
10	27	Sample Summit L
11	28	Sample Summit L
12	29	Sample near camp. ATV out To Dawson
13	30	Drive Pelly. Mob boat to Pelmac Wayne Curry.
14	July 1	Sample Pelmac.
15	2	Sample Pelmac.
16	3	Sample Pelmac.
17	4	Sample Pelmac.
18	5	Sample Pelmac.
19	6	Sample Pelmac
20	7	Sample Pelmac. Demob to Pelly.
21	8	Mob to Packersback Located claims & samples
22	9	Sample outside claims.
23	10	Sample outside claims
	11	Target Evaluation Packersback
	12	Target Evaluation Packersback Flew out
24	13	Sample Little Salmon.
25	14	Sample Little Salmon
26	15	Sample Braden.
27	16	Sample Braden.
28	17	Sample Braden.
29	18	Sample Frenchman
30	19	Sample Frenchman.
	20	demob.

Dave Bennett

The following is a summary of my prospecting activity for 2000. Mr. Dave Bennett was a co-applicant on this program

Day	Date	Activity
	June 16	mob to Dawson City. Sort gear and supplies.
1	17	Fly to Scroggie Ck Map rocks.
2	18	Stake Rum Run 21-40
3	19	Sample Upper Mariposa
4	20	Sample Mariposa along road.
5	21	Sample Upper Scroggie
6	22	Map road Mariposa-Scroggie
7	23	Stake Rum Run 41-50, 53-59
	24	Target Evaluation Scroggie. Demob Dawson
8	25	ATV to Summit L. Sample.
9	26	Sample Summit L
10	27	Sample Summit L
11	28	Sample Summit L
12	29	Sample near camp. ATV out. To Dawson.
13	30	Drive Pelly. Mob boat Pelmac Wayne Curry.
14	July 1	Sample Pelmac
15	2	Sample Pelmac
16	3	Sample Pelmac.
17	4	Sample Pelmac
18	5	Sample Pelmac
19	6	Sample Pelmac.
20	7	Sample Pelmac Demob to Pelly.
21	8	Mob to Packersback. Located 1999 sample sites
22	9	Sample outside claims.
23	10	Sample outside claims
	11	Target Evaluation Packersback.
24	12	Sample outside claims Flew out
25	13	Sample Little Salmon
26	14	Sample Little Salmon
27	15	Sample Braden.
28	16	Sample Braden
29	17	Samples to Whitehorse. Bought supplies.
30	18	Sample Frenchman.
31	19	Sample Frenchman
	20	demob

Gordon G Richards

The five areas prospected were all evaluated with an emphasis on geochemical surveys. Silt, rock, till and soil samples were collected throughout the areas as itemized in the following table.

AREA	SILTS		ROCKS		TILLS		SOILS	
	g r	d b	g r	d b	g r	d b	g r	d b
MacMillan Summit	0	4	21	7	63	65		
Pelmac	18	13	23	18	28	47		
Frenchman	0	3	0	3	6	4		
Braden	0	0	3	2	6	16		
Little Salmon Lake	1	2	2	4	8	7		
Scroggie	17	34	8	2	0	0	11	0
TOTALS	35	56	57	36	111	139	11	0

Silt samples were collected from running streams by either collecting fine sediment with a scoop directly from the stream or by screening through a -25 mesh sieve into a plastic basin in order to obtain a sample containing about 40 gm of -80 mesh material for analysis. Attached field notes describe when screening process was used. Samples were collected in appropriately numbered gusseted kraft sample bags.

Rock samples were made of three to seven rock chips from float or outcrop as described in field notes and small enough to fit into a gusseted kraft sample bag.

Till samples were collected by a scoop from a pit dug by shovel to depths as much as one meter. This was necessary because of abundant loess throughout all areas except Scroggie Ck, which was unglaciated, and therefore lacking till. A shovel-dug pit gave a good look at the soil profile in order to distinguish till from other 'soil' types. As samples were ultimately to be screened to -150 mesh in the lab, one to three kg of till material was collected depending on coarseness of the sample and placed into spun polyester bags. Coarser sandy samples required bigger field samples in order to achieve this goal.

Soil samples were collected with a scoop from pits dug by pick, mattock or shovel or by auger from C-horizon wherever possible, although some B-horizon material was sometimes included in the sample. Samples were placed in numbered gusseted kraft bags for ultimate analysis of their -80 mesh fraction.

Control of sample locations was by hip chain and compass with the use of 1:50,000 topo maps.

All samples were analyzed at Chemex Labs, 212 Brooksbank Ave, North Vancouver, B.C. Rock samples were crushed and pulverized, all other samples were dried and sieved (silts & soils -80 mesh, tills -150 mesh). Gold analyses were done on 30 gm samples by fire assay preconcentration and atomic absorption finish. A 32 element ICP analyses was done on most till, silt and soil samples. Results are included in an Appendix.

Following is a discussion of the results for each of the five areas studied. On the accompanying maps, gold and some arsenic results are plotted for all silts and all anomalous gold results (>5 ppb) for other types of samples are also plotted.

MACMILLAN

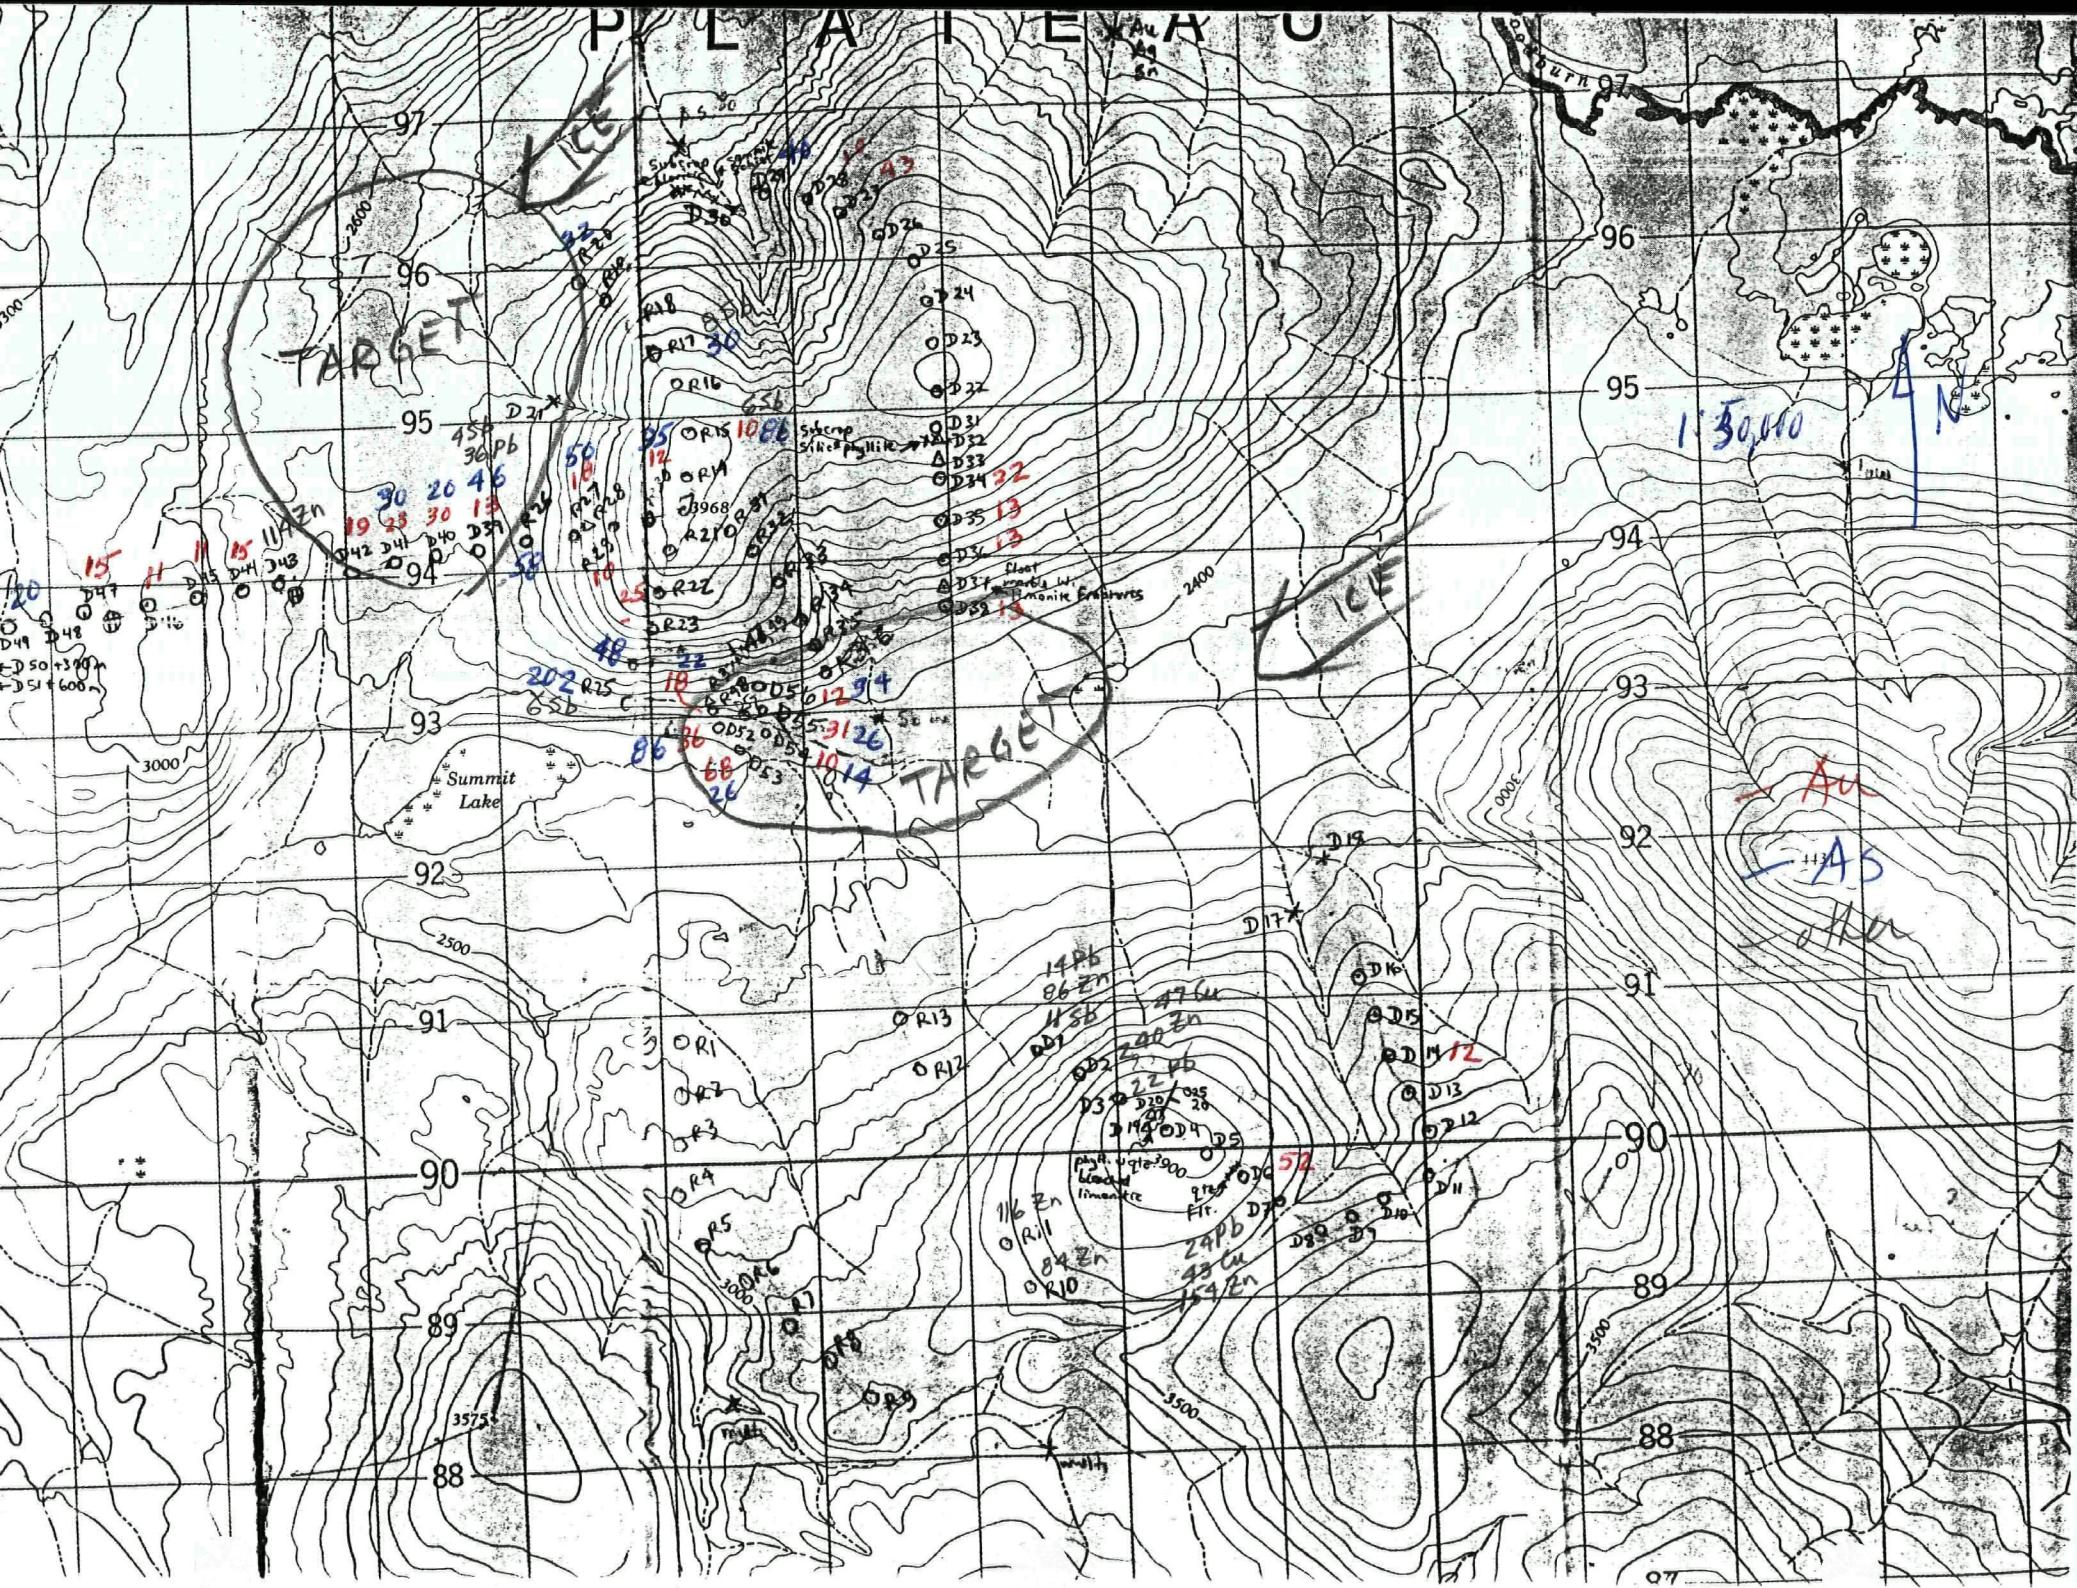

Access was made by foot into and helicopter out of the Packersback Claim area, by ATV into Summit Lake area and by boat to Pelmac Ridge area

At Packersback Claim area, three targets identified in our proposal were followed up by additional till sampling and rock chip sampling. Work on claims was done under a Target Evaluation Program. Results were somewhat encouraging and are described in detail in the attached report on the Packersback Claims and adjacent ground.

At Summit Lake, coincident Au-As anomalous till patterns exist at two localities, two km east of Summit L at our campsite and two km north of Summit L. Both of these localities occur on the valley floor and could easily be transported up to three-km down-ice from an area east of camp and northeast of the northerly anomaly. At camp, numerous pieces of angular silicified float of differing metamorphic rocks including dark phyllites and limestone were all -10 ppb Au although the tills were anomalous for gold. Follow-up prospecting would best be done by additional till sampling to define the up-ice limits of anomalous geochem.

Some anomalous base metals were found in samples collected on the hill south of camp across the valley. (D1, 2,3, 7 and R10, 11) 1999 prospecting focused on the major north flowing creek west of this years sampling where RGS data indicated anomalous base metals. No strong pattern is evident but some follow-up could be done in this area.

At Pelmac Ridge, anomalous gold is fairly common in till samples but no strong coherent patterns supported by anomalous pathfinder elements are obvious. A40 & 41 at the westernmost area sampled is one exception where 40 and 53 ppb Au are supported by 3 and 7 ppm Sb over an area underlain by weakly limonitic muscovite-sericite schist and chlorite schist. The most interesting lead is a multielement anomaly at A66 & 67 where till samples were noted to contain lots of rusty muscovite schist chips. These two samples ran 11 & 31 ppm Sb, 36 & 327 ppm As, low & 143 ppm Cu, 150 & 212 ppm Zn, and 29 & 44 ppm Pb. This geochem/geology is a good lead for VMS mineralization and should be prospected further. A single sample anomaly at A161 is also anomalous for base metals, has some support in adjacent samples and should also be further prospected.

CERTIFICATION:

FRENCHMAN

Access was made by truck to the northeast end of Frenchman Lake from where traverses were begun.

Geology was much as shown on government maps except that another slice of Upper Triassic flaggy black limestone of the Laberge Group was found in the creek at sample site A207 within Laberge Group grawacke. Some of the grawacke float in the creek below this point was rusty with calcite? and/or silica? cement although samples were not anomalous for any metals. Some of the limestone float contained ankeritic fractures though it too was not anomalous

Two geochemical signatures were noticed in the results. Till samples A204, A206 and C212 were anomalous for Bi, Ag and S See map and results. Silts A207, A208 and A211 were anomalous for Zn, Cd and S Both sets of results are interesting and require additional prospecting to determine their source A target area for this prospecting has been outlined on the map

10% total & 50% frie for As,
thresholds for Laberge Group are
believed to be like values for

BRADEN

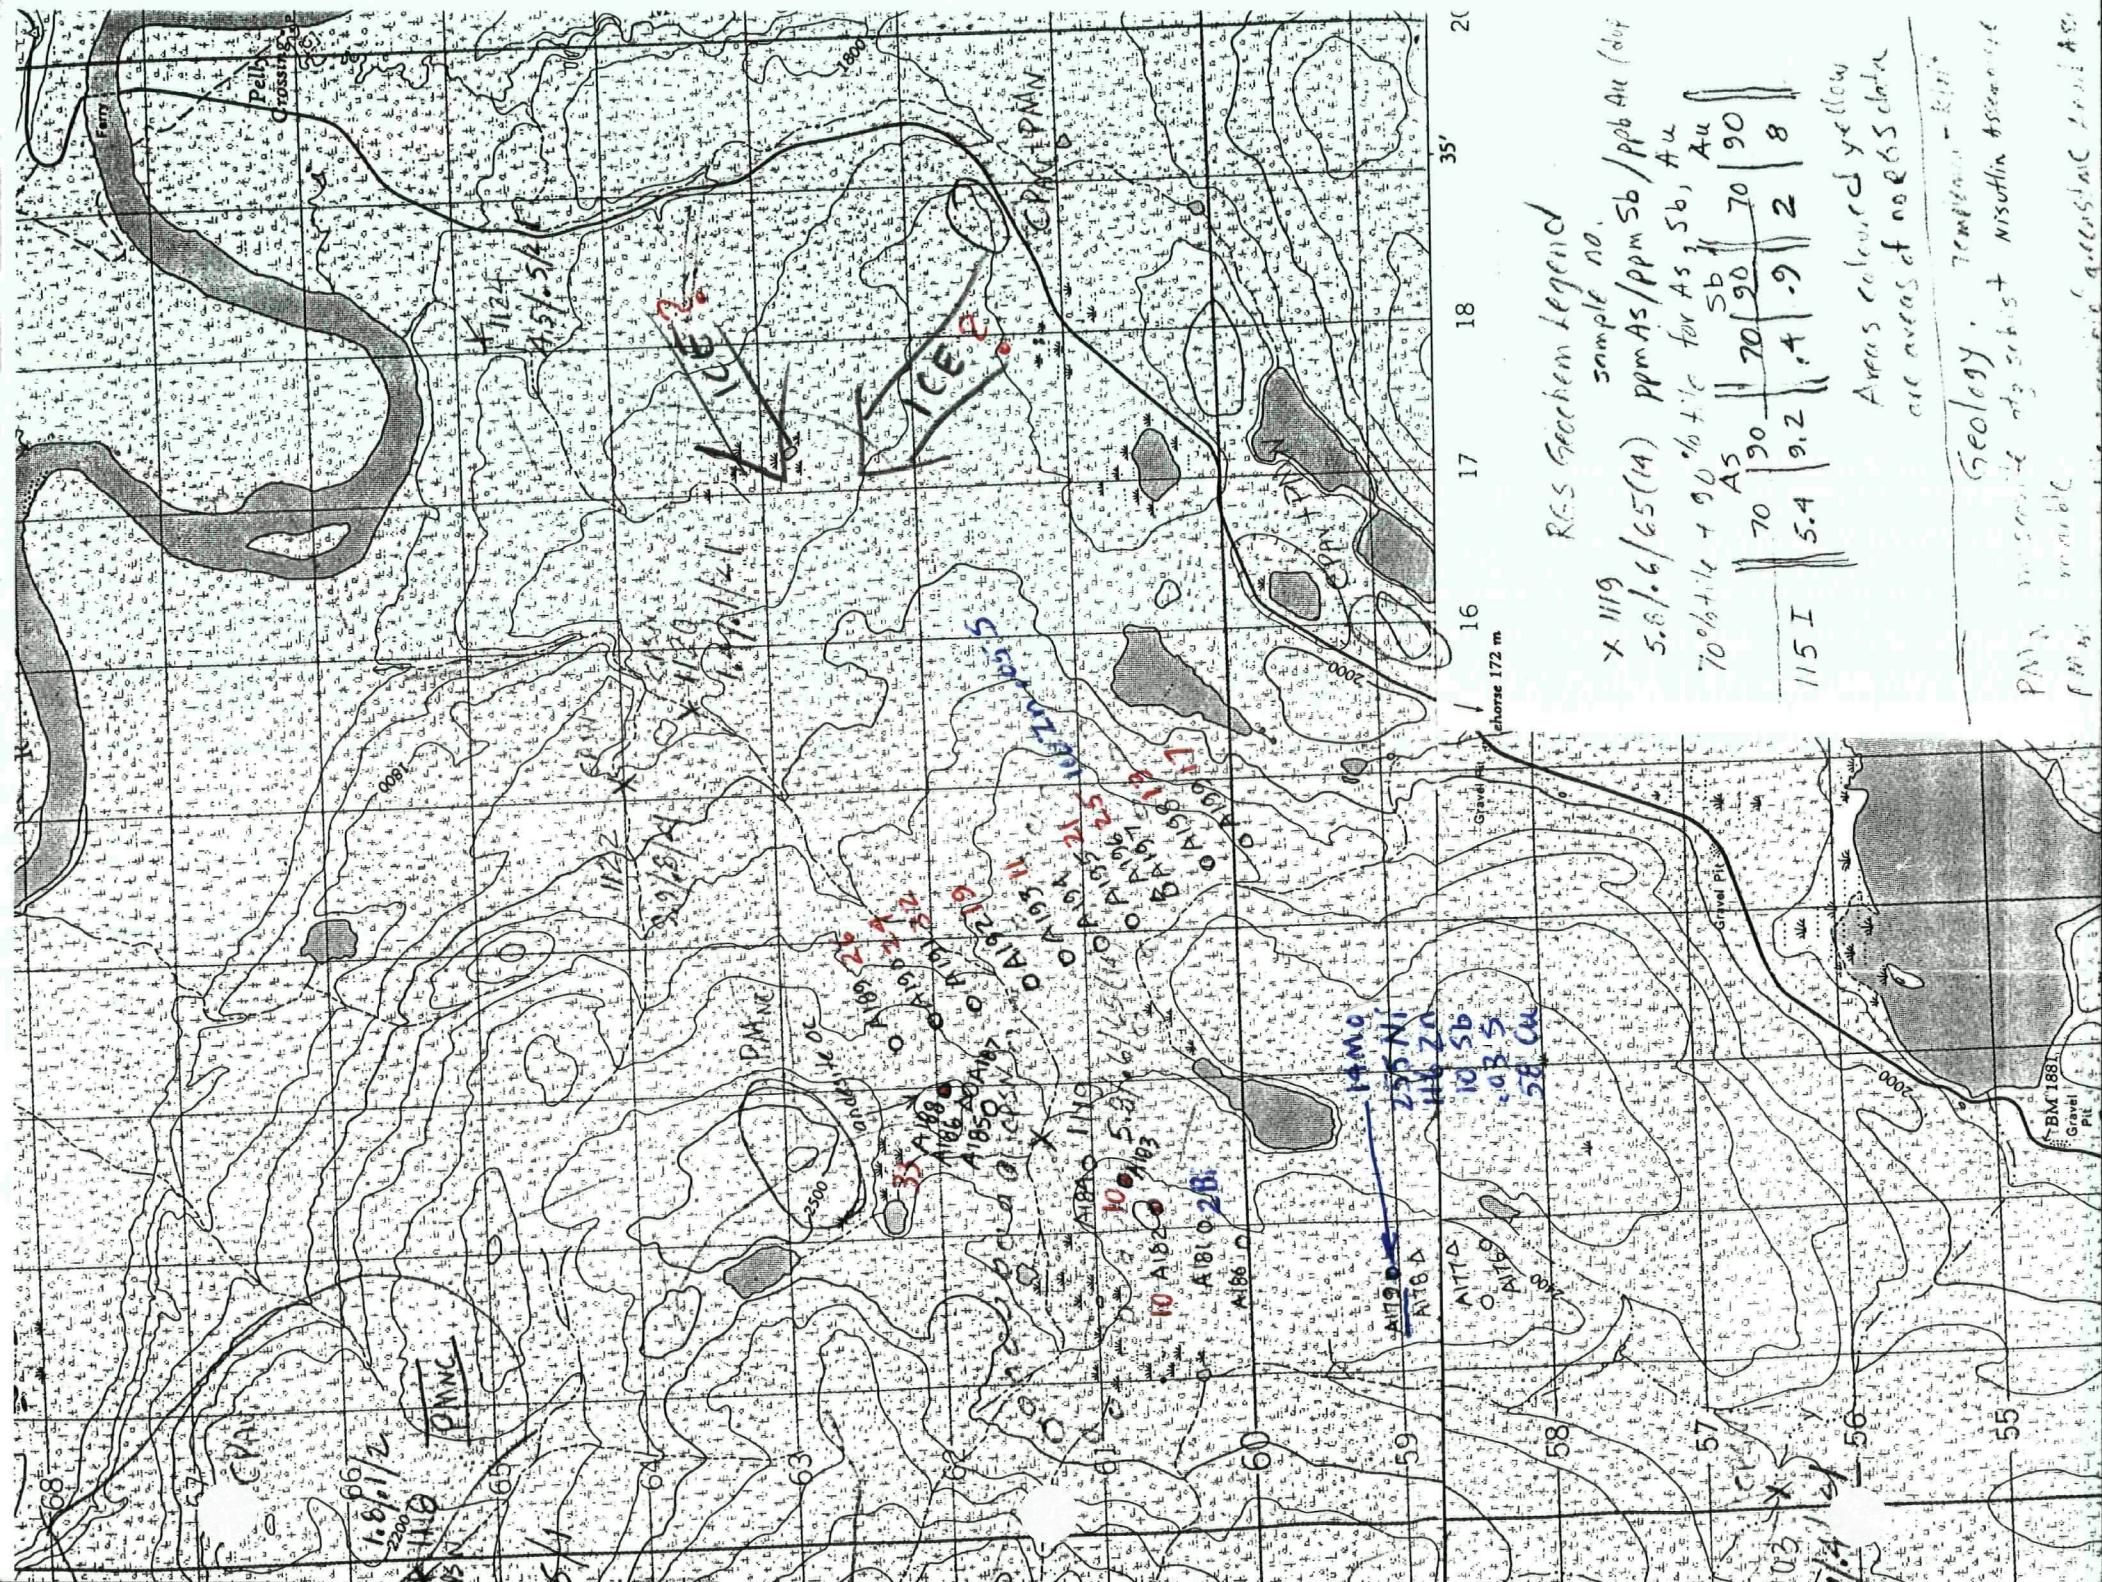

Access to the area was by truck along the Klondyke highway and side roads for traverses across the targets

Few outcrops were noted Graphitic schist subcrop was found in the sample pit at A179, andesite outcrop at A188, marble outcrop at A185, boulders of sub-angular granodiorite at A191, and outcrop of Carmacks Group mafic diorite near C 209 Several pieces of rusty silicified float were sampled but only one was anomalous A200 assayed 130 ppb Au and 48 ppm As. A sample of silicified dark limestone, C209, containing a few narrow quartz veinlets, some with open-space fillings assayed 1 4 % Zn, 129 ppm Cd, and .8 ppm Ag. It was subangular and found along the road as shown on the map. No other similar pieces were found There were a few boulders of chert pebble conglomerate and much dark phyllite

Other than the rock sample described above, there were two geochemically anomalous till patterns. A179 was anomalous for Ni, Mo, Zn, Sb, Cu, and S. The sample pit was nearly outcrop of graphytic schist. Shale-hosted Ni-Zn-Mo-PGE mineralization could occur in the area. High phosphorous results, an associated element with known occurrences, occur in the tills collected to the south. Ten contiguous till samples A188 to A199 were anomalous for gold, 11 to 33 ppb Au, but no other elements were anomalous in the samples This explains the anomalous RGS gold value that was being followed-up but is not very encouraging without other element support Perhaps the gold is remobilized by ice from a nearby placer gold occurrence

The 1 4% Zn and A179 should be further evaluated.

CERTIFICATE OF ANALYSIS

A0024768

SAMPLE	PREP CODE	Zn %											
C209	212	--	1.40										

CERTIFICATION:

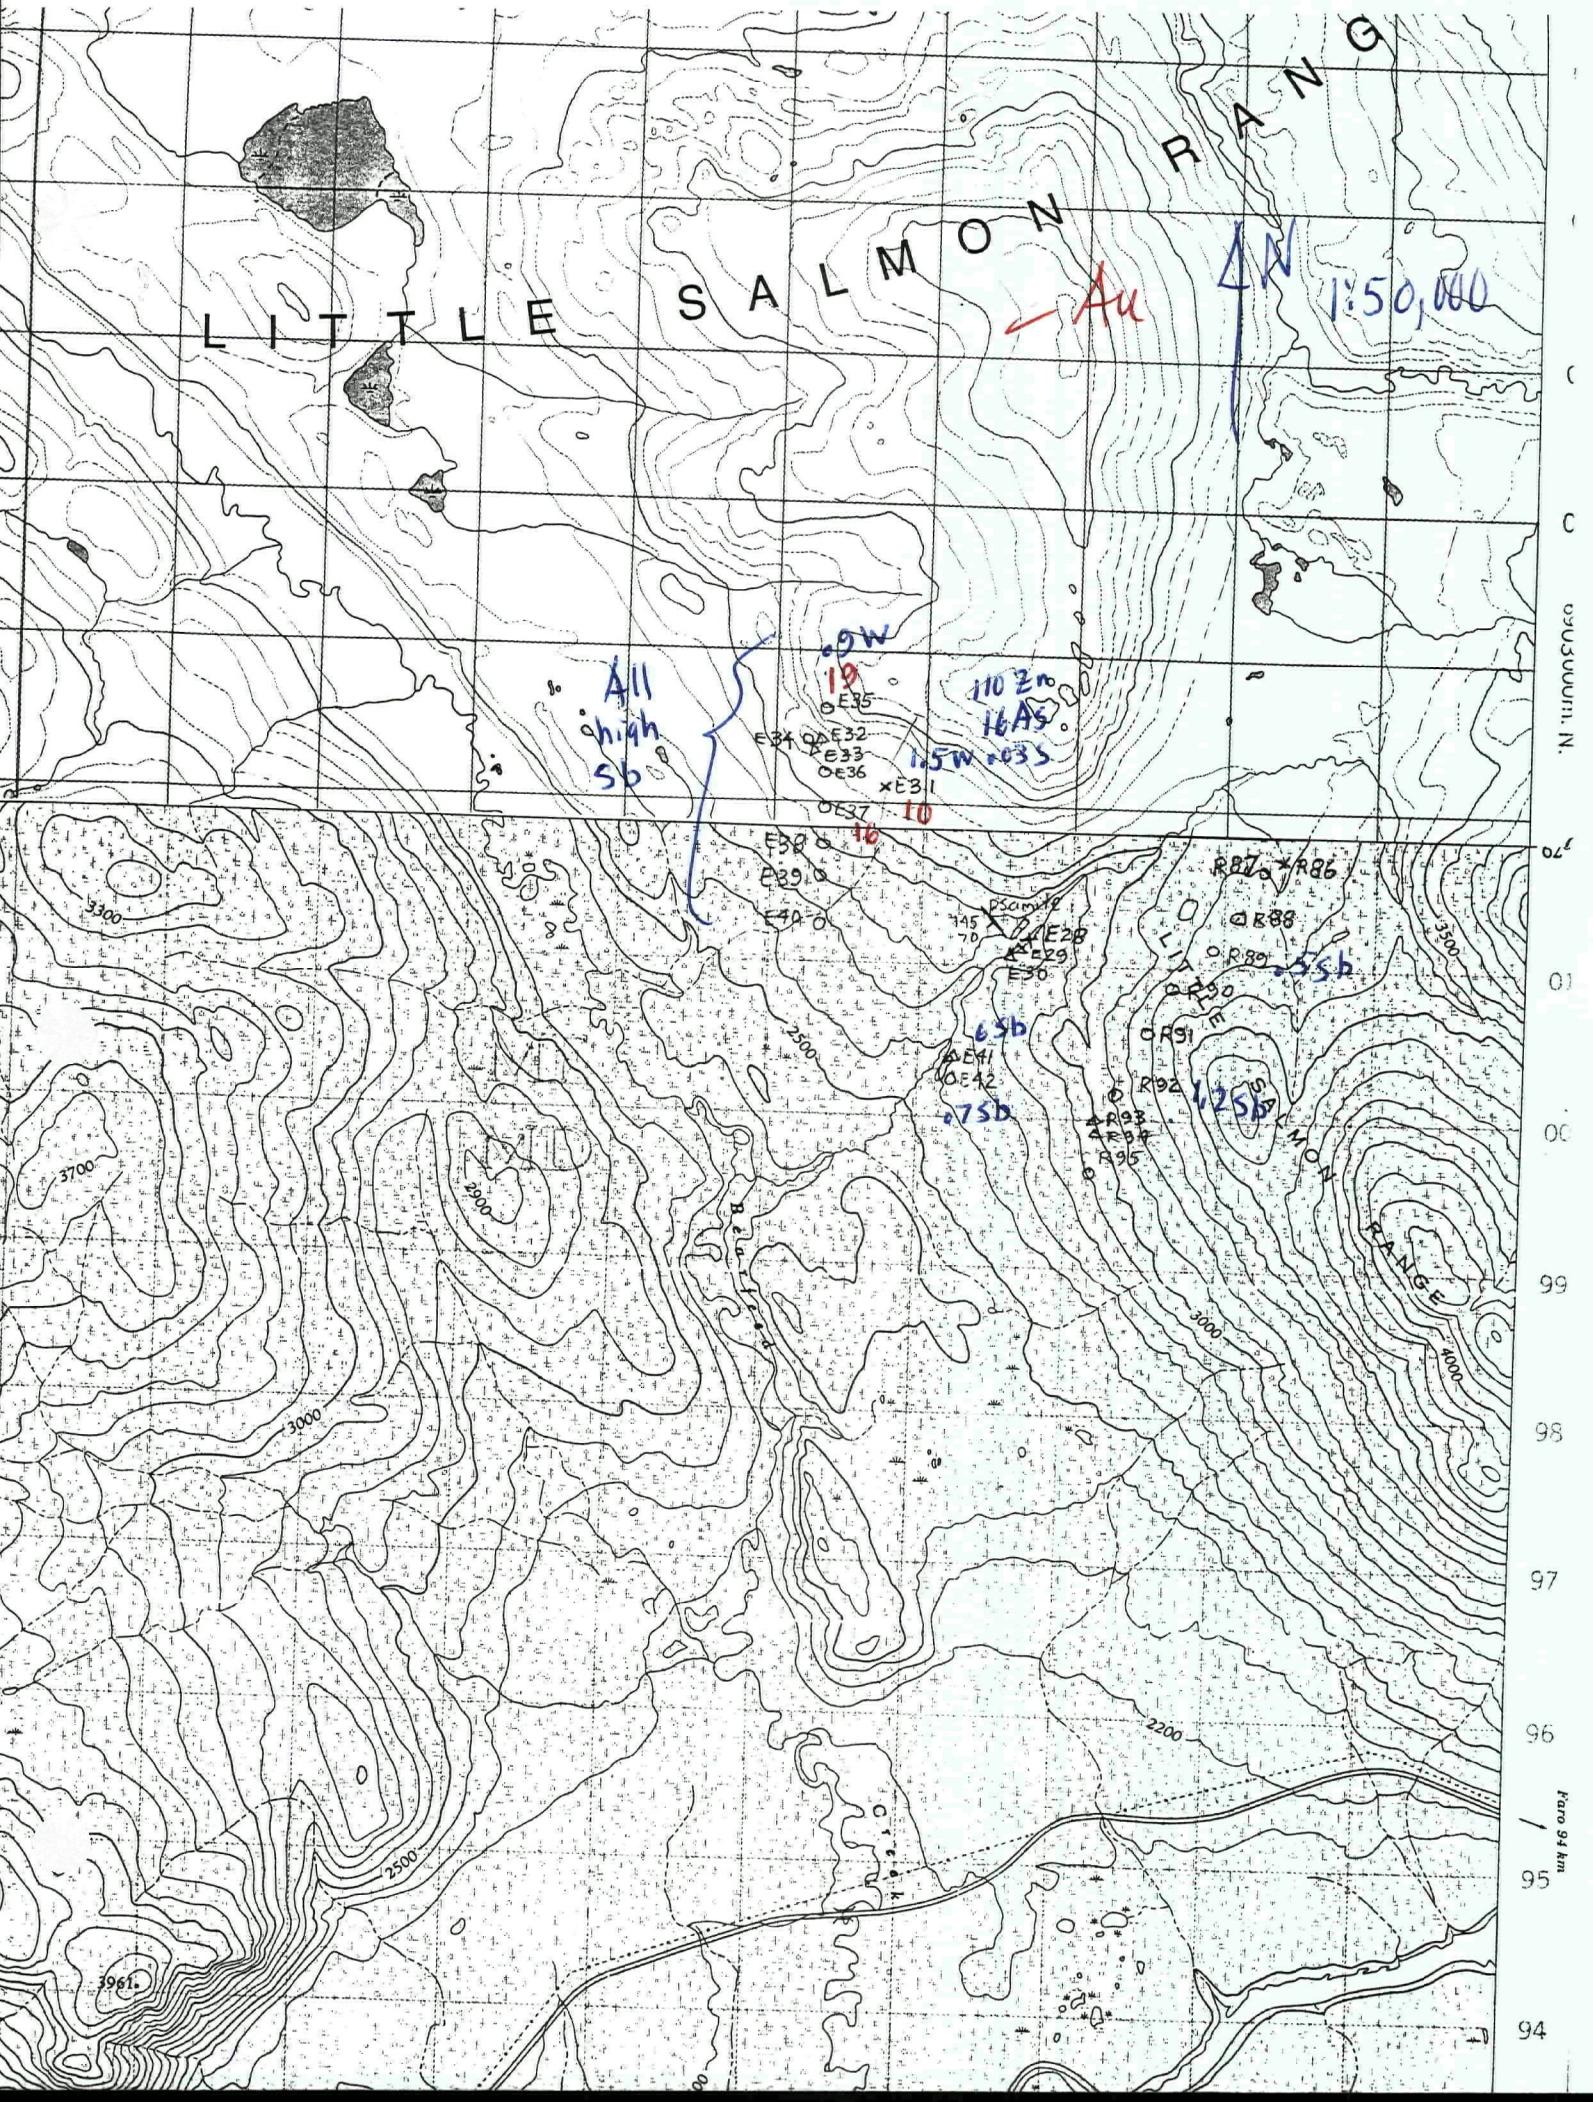

LITTLE SALMON LAKE.

Access was made from Carmacks by truck along the Robert Campbell Highway to a point a few km west of Little Salmon Lake, where an old trail, suitable for walking, leads six km north to the area of interest

Outcrops seen include psammite, quartzite, chlorite gneiss and phyllite all with variable quartz veins and associated ankeritic alteration none of which were significantly anomalous for any metals. Poor condition of trail into the area made it difficult to reach our objective of the creeks northwest of E35. A backpack camp or helicopter would be necessary to reach this area.

Sb was the most common anomalous element with E31 to E42 and R89 & 92 all with elevated values. Modest gold anomalies occurred in tills E35 & E37 and silt E31. E35 & E31 were anomalous for W and E31 was also anomalous for Zn, As and S. These samples make the original target immediately north all the more of interest. Silt and loess was fairly deep, in places over a meter, which made sampling time consuming.

Prospecting north of E35 remains a sensible target.

SCROGGIE

Access was made by fixed-wing aircraft from Dawson in June and by ATV from Pelly Farm in August

Prospecting followed-up and added to last year's program and continued to provide encouraging results. Thirty-seven additional Rum Run claims were staked and initial sampling of these claims was done. Refer to the attached report on these claims for detail of work carried out on and in close proximity to the claims. The map on the preceding page shows the prospecting done away from the claims. Most of this data is stream sediment sampling.

Two granite bodies, additional to the granite batholith mapped by Bostock, were mapped. A stock of granite, separated from the main batholith by three to five km of metamorphic rocks is a coarse-grained moderately foliated granite composed of one-half cm long quartz grains set in coarse to medium-grained pink feldspar with five to ten percent variably chloritized hornblende and biotite. Mafic biotite-hornblende rich xenoliths are common locally. About 20 percent of the feldspars are white. Another granitic body underlies much of the MB claim and extends uphill to the east some unknown distance.

The granite south of Scroggie Creek has some interesting anomalous geochemistry along its southern and western contacts. Samples C29 to C34 are anomalous for gold, many are anomalous for W (as well as some downstream within the granite) and two are anomalous for Bi and Ag. On the west end of the granite, biotite-muscovite schist is common along with some quartz vein rubble in the creeks. Along the south contact, quartz-eye rhyolite and a variety of felsic tuffs outcrop and form abundant float in creeks at sample sites C27 to C33. Schists and gneisses are also common as float at sample sites C32 & C33. Pegmatite occurs at several sites. The granite contact as shown south of C27 and C28 should probably be drawn along Scroggie Creek, possibly fault offset, and be drawn from between C26 & 27 towards C32. Stream sediment sample C26 produced a >1000 ppb Au. Float at this site was noted to be mainly pink granite with some schists, phyllites and gneisses.

Au, As and Pb anomalies at C55, C56 and C58 probably reflect the continuing gold anomaly associated with the quartz-muscovite schist (QMS on map) that outcrops

sporadically in this area. This anomalous gold may extend onto the LA claims further east as all the claims now form a pronounced linear encompassing all the known QMS

Another gold anomaly occurs in stream sediments C1 to C4 collected from streams on the southwest flank of Pyroxene Mountain. C3 has a high Au of 320ppb. It is interesting that no pyroxenite was seen in any of the creeks at these sites although the contact is shown here. Some moderately anomalous Pb occurs with the anomalous Au. Float was granite, gneisses and schists

All the anomalous areas described above should be further prospected. Additional stream sediment sampling is recommended further up Scroggie Creek from C30 and further up Stevens Creek from C14. Recce soil sampling is recommended for all four targets at which time rock chip sampling of mineralized float and outcrop and silt sampling of streams and seeps should be done

Respectfully submitted

Dave Bennett

Gord Richards
