APPENDIX A MMI SAMPLE DATA

1.0 SUMMARY

The Peanut property comprised of 41 claims, approximately 43 km NNW of the Carmacks in the Whitehorse Mining District of central Yukon. The claims were originally staked by Shawn Ryan of Dawson City, Yukon and are currently optioned to BCGOLD Corporation. The history of exploration in the area stretches back to the turn of the century when copper mineralization was first discovered at Williams Creek some 40 km south of the Minto copper-gold deposit. Foliated and non-foliated granitic rocks of the Early Jurassic Aishihik Suite underlie most of the property although rock exposures are poor comprising less than 10% of the area. Work completed in 2007 included MMI (Mobile Metal Ion) soil sampling, mapping, prospecting and rock sampling. Work completed in 2007 included MMI (Mobile Metal Ion) soil sampling, mapping, prospecting and rock sampling. A total of 208 MMI soil samples including duplicates and blanks and were collected between September 18-26, 2007. MMI samples were submitted to SGS Canada Inc. in Toronto for MMI analyses. The MMI samples were left at the Trans North base in Carmacks and were only sent for analyses in late January. Once results are received and plotted this report will be amended to reflect the results.

2.0 INTRODUCTION AND TERMS OF REFERENCE

The Peanut Claim group is owned 100 % by Shawn Ryan of Dawson City Yukon subject to an option agreement with BCGOLD CORP whereby BCGOLD can earn a 100% interest in the Peanut Claims as part of a larger 710 claim group located in the Carmacks copper-gold belt which hosts the Minto and Williams Creek deposits.

The purpose of this report is to summarize the work completed between September 18-26th on the PEANUT1-28 claims to comply with reporting requirements under the Yukon Mining Incentive Program.

3.0 RELIANCE ON OTHER EXPERTS

This report is based upon the results of fieldwork partially supervised by the author, publicly-available assessment reports, and certain private reports prepared for and provided by BCGOLD CORP. There is no reason to believe that any of this information is incorrect.

The author has relied on information provided by the Yukon Mining Recorder to describe the mineral tenure status of the property and believes, to the best of his knowledge, that this information is correct.

MMI sampling was carried out by crews from Ryanwood Explorations Inc. Prospecting, , and sample data compilation and plotting was completed by Gary Lustig, M.Sc., P. Geo. of G. N. Lustig Consulting Ltd.

4.0 PROPERTY DESCRIPTION AND LOCATION

The Peanut claims are located 43 kilometres NNW of Carmacks, in the central Yukon (Fig. 1). The property falls within the Whitehorse Mining District on NTS map sheets 115I/07 and is centred at 62° 23' 00" north latitude and 136° 34' 40" west longitude. The claims cover favourable geology and regional airborne magnetic anomalies and Regional Stream Sediment anomalies that are prospective for Minto and Williams Creek style copper-gold mineralization. The mineral claims are registered to Shawn Ryan of Dawson City, Yukon and are under an option agreement to BCGOLD CORP.

TABLE 1 - CLAIM DATA

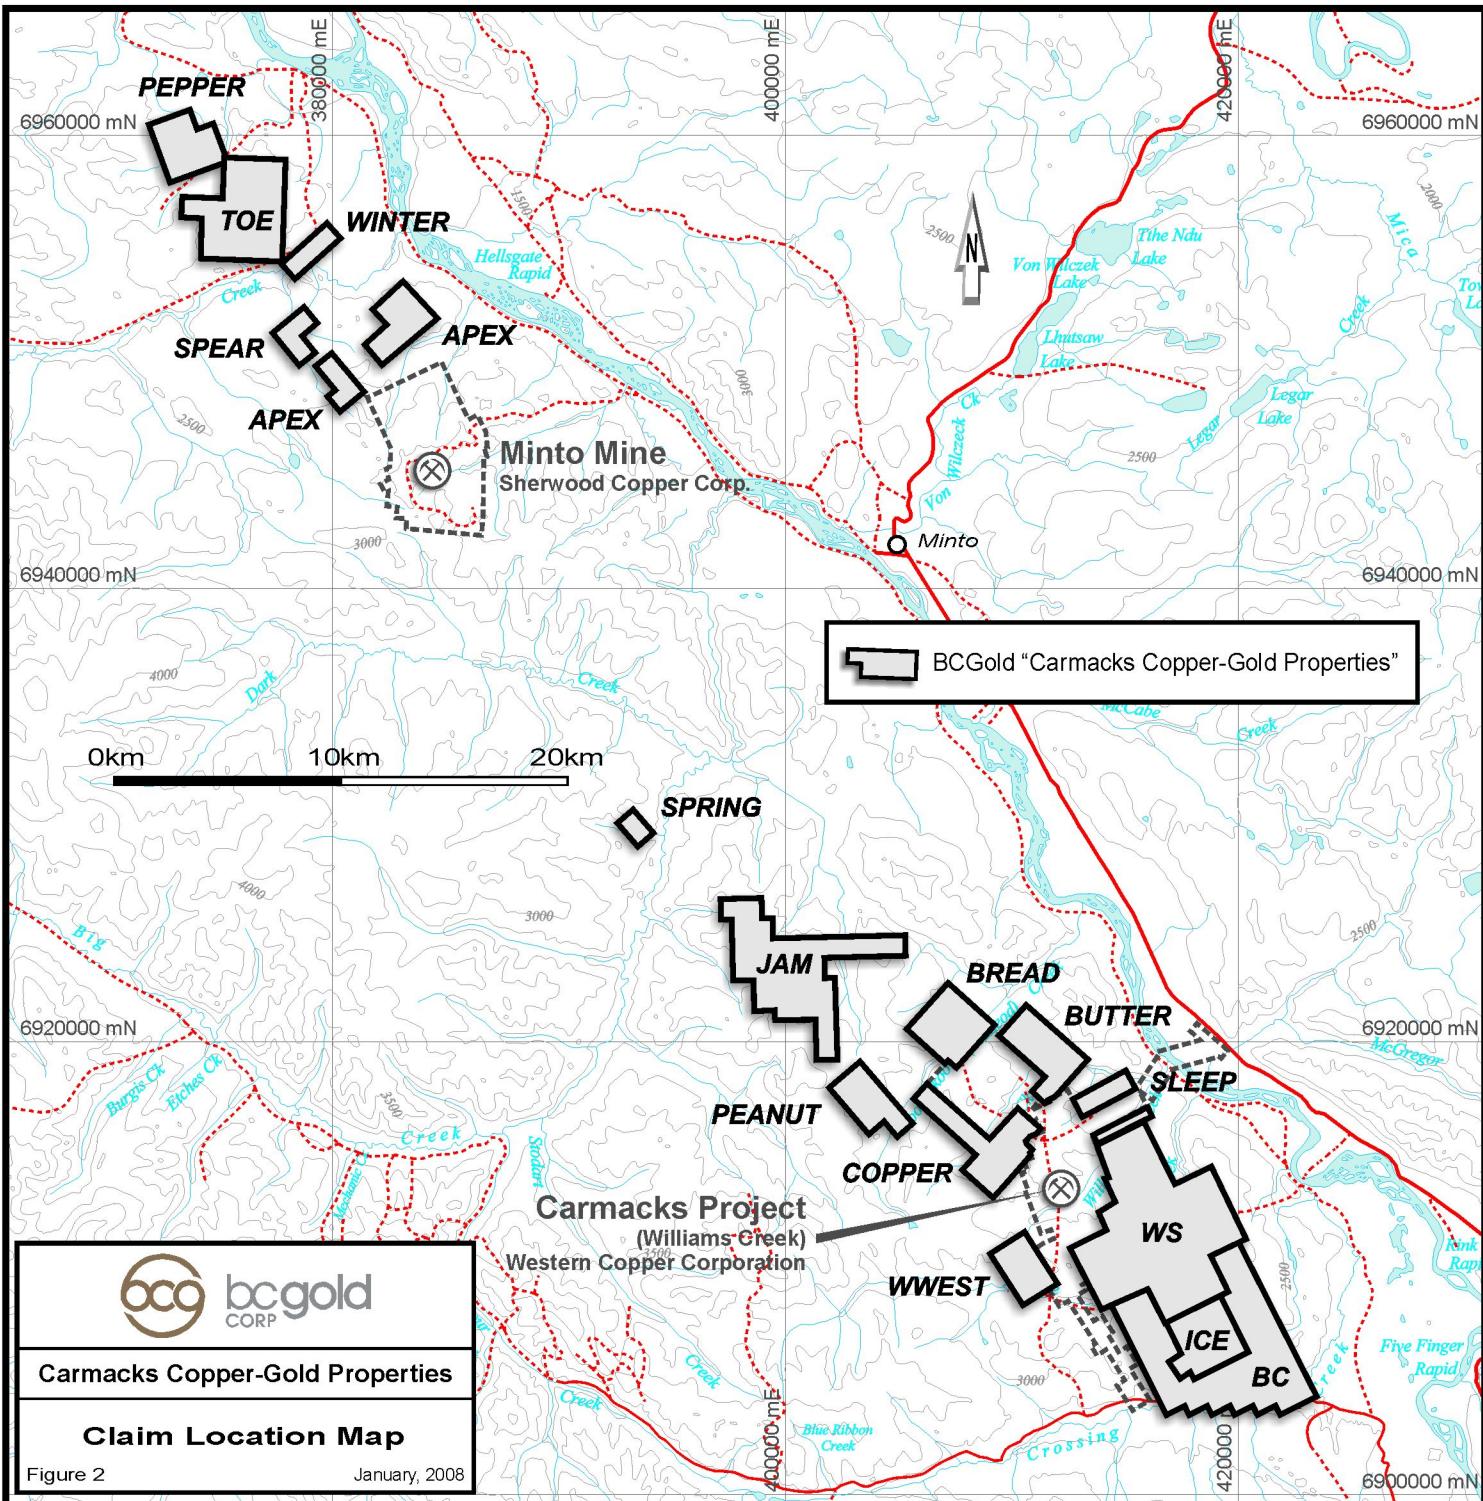

Claim Name	Grant Number	No. Of Claims	Expiry Date
Peanut1-28	YC53882-YC53849	28	August 23, 2012

In accordance with the Yukon Quartz Mining Act, yearly extensions to the expiry dates of quartz claims are dependent upon conducting \$100 of work per claim or paying the equivalent cash in lieu of work. Work must be filed in the year the work was completed. Excess work can be used to extend expiry dates up to maximum of four years. Assessment costs can be applied to adjoining claims through filing grouping certificates. Filing a statement of work and costs and submission of an assessment report to the Whitehorse Mining Recorder verifying completion of the work, are also required no later than six months after the anniversary date of the claim.

The claims are located within the Traditional Territory of the Little Salmon Carmacks First Nation, which has a land claim settlement Agreement under the Yukon Umbrella Final Agreement.

5.0 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

Access to the property is by helicopter from Carmacks. Low precipitation and a wide temperature range characterize the climate. Winters are cold, and temperatures of -30°C to -40°C are common. Summers are moderately cool to hot, with daily highs of 15°C to 30°C. The Town of Carmacks is the closest centre for obtaining groceries, fuel, accommodation and some limited rental and contracted exploration services. Trans North Helicopters maintains a summer helicopter base at Carmacks

6.0 HISTORY

Companies may have explored the area covered by the PEANUT1-28 claims during the Williams Creek exploration and development stages but no reference to prior work has been located.

7.0 GEOLOGICAL SETTING

7.1 Regional Geology

The Peanut claims are located approximately 10 kilometres northwest of the Williams Creek copper-gold deposits owned by Carmacks Copper. This area of the Yukon is bounded by the Stikinia Terrane rocks to the east, Yukon Tanana Terrane rocks to the north and the Coast Plutonic Complex rocks to the west. The Minto and Williams Creek copper-gold deposits are hosted within foliated biotite rich granodiorite and granitic rocks of the early Jurassic Aishihik Suite.

7.2 Property Geology

The Peanut 1-28 claims are underlain primarily by foliated to non-foliated hornblende-biotite granodiorite with aplite dykes. Foliations are generally northwest trending and dip at 20-30 degrees to the northeast. As is typical elsewhere in the belt, outcrop is poor to scarce. The only work carried out on the Peanut claims was MMI sampling and an airborne magnetic and radiometric survey.

8.1 Mobile Metal Ion (MMI) Soil sampling

MMI sampling was completed over most of the Peanut1-28 claims. A total of 208 samples were collected and were just recently submitted to SGS Mineral Services in Toronto. MMI sampling is a relatively new analytical process that measures mobile ion elements and is believed to be able to detect deeply buried mineralization. Results from the sampling will be reported in an amended report when sample results re received and processed

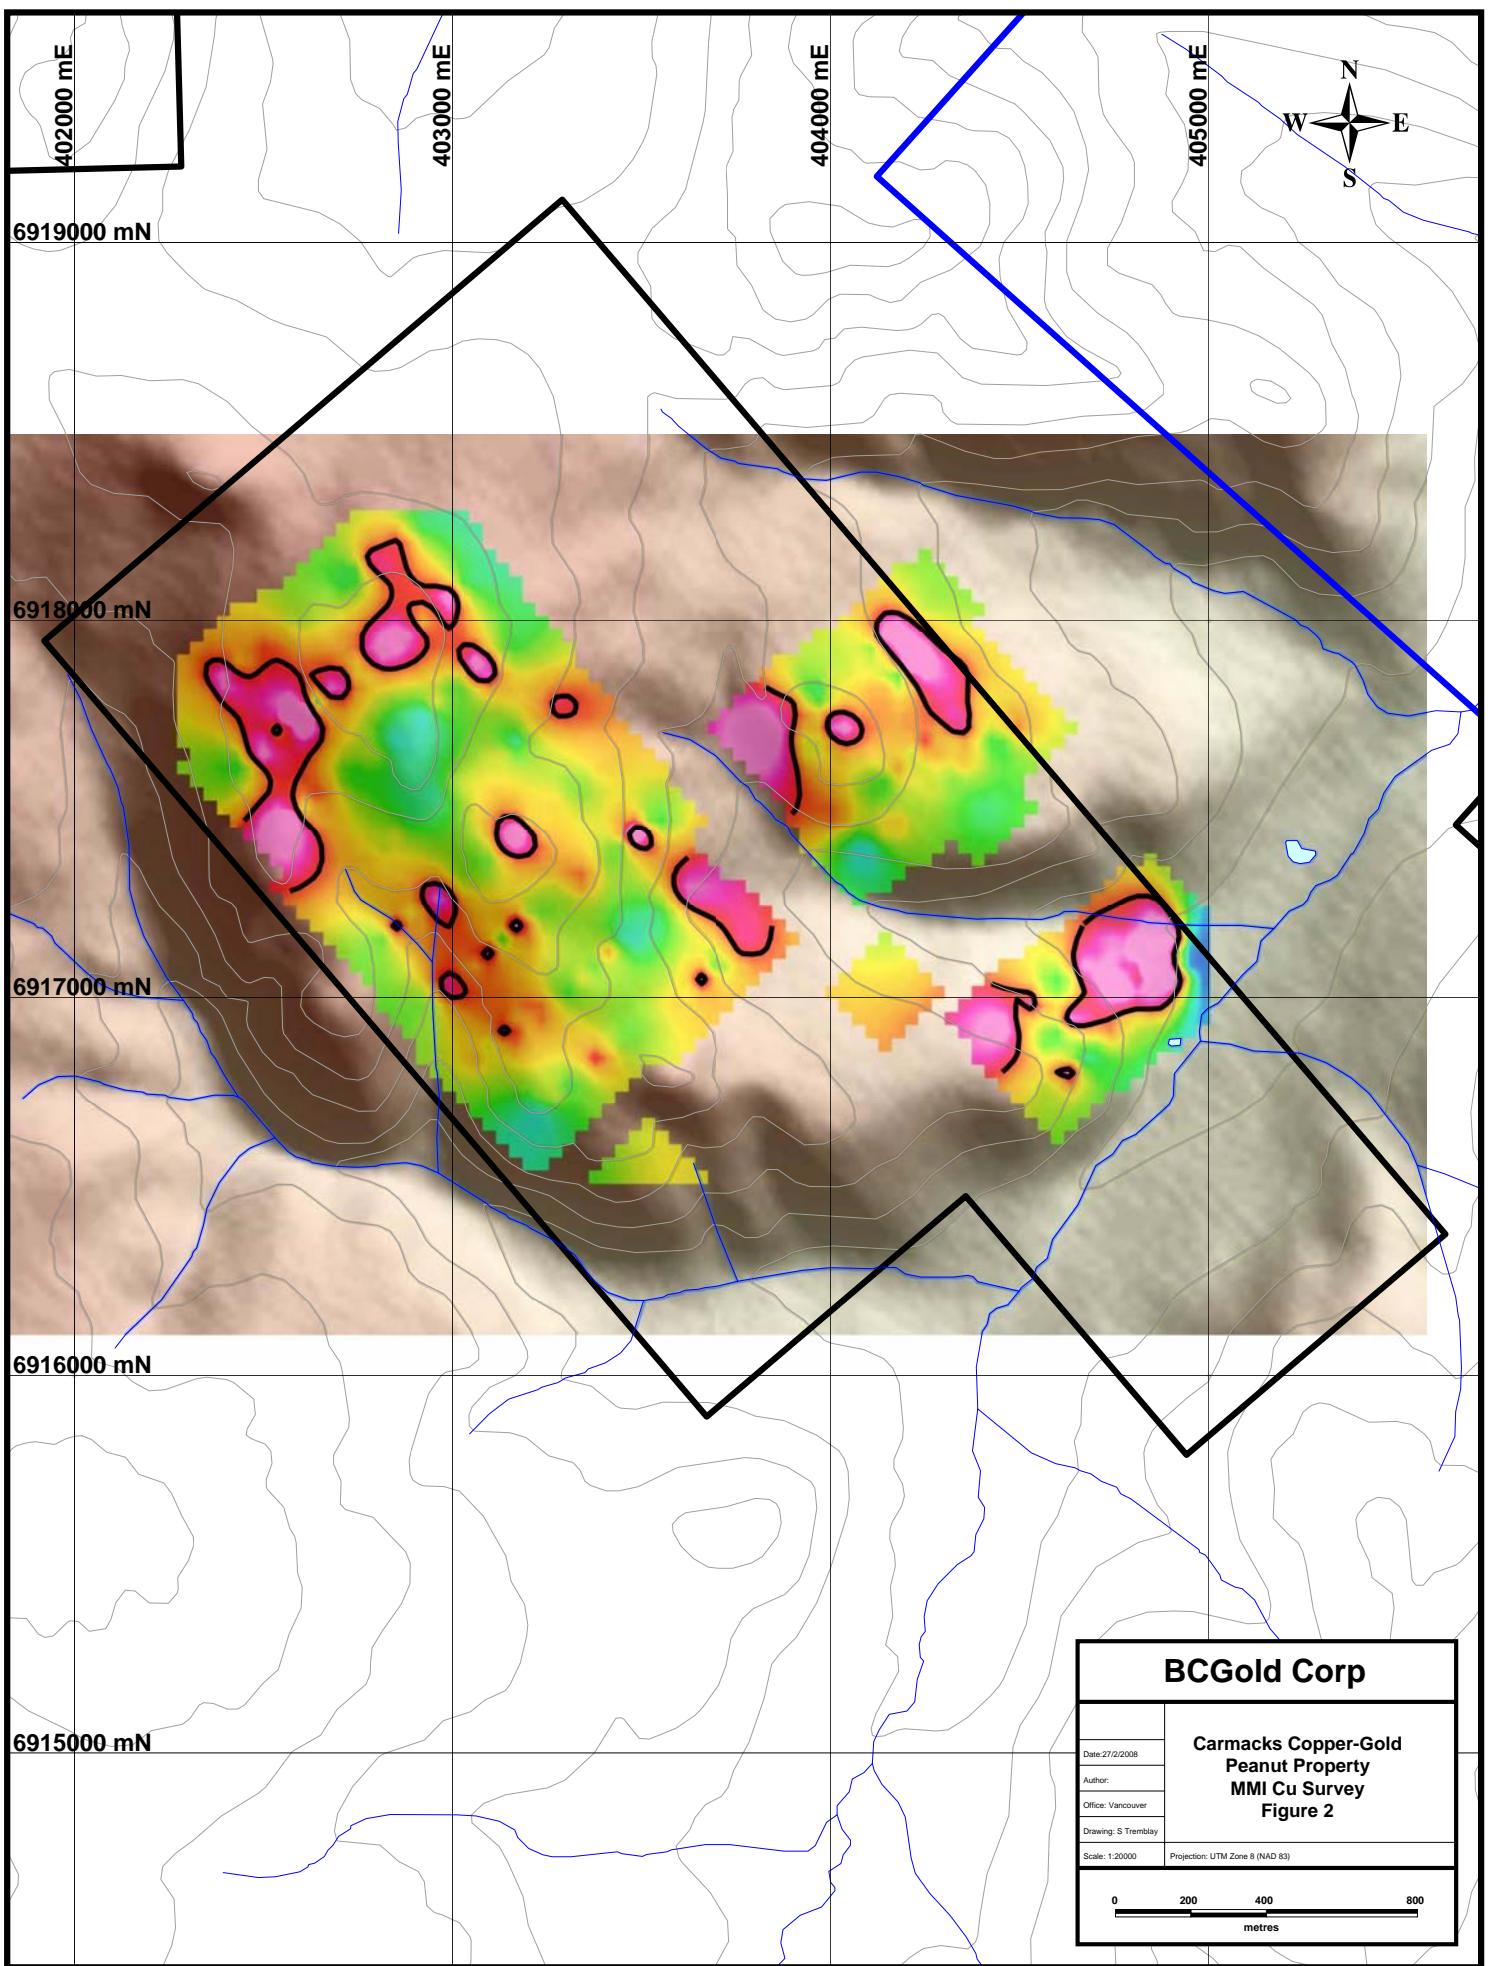

Samples were collected using soil augers and mattocks whichever was appropriate depending on vegetative cover and the thickness of the organic horizon. Generally samples were collected 10-25 cm below the base of the organic horizon, were placed in a plastic zip-lock bag and then into a pre-numbered Kraft soil bag. The auger or mattock was cleaned after each sample with a jay cloth to avoid contamination.

At each sample location, a GPS reading was taken using the pre-numbered soil sample bag for reference. In a palm pilot, the following data was recorded:

Primary colour
Secondary colour
Sample site slope

Sample depth in cm
Sample quality (1-5)
Sample soil horizon
Sample site vegetation
Sample site ground cover
3 fields for notes
1 field for Freehand comments

Samples were shipped to SGS Mineral Services in Toronto where they were analysed using a weak acid leach. Sample analytical data was then merged with GPS and field data. With MMI samples the normal procedure is to determine the average value of the sample population and then divide each individual sample by the sample average to determine a ratio value, which is then plotted using percentile ranges to indicate anomalous areas.

8.0 INTERPRETATION AND CONCLUSIONS

The area of the Peanut 1-28 claims is underlain primarily by Aishihik Suite foliated and non-foliated hornblende-biotite granodiorite with late aplite dykes. There were no prospecting or geological traverses completed on the Peanut Claims.

RECOMMENDATIONS

Recommendations will be provided in an amended report when analytical results are received and plotted.

Respectfully submitted;

R. Allan Doherty, P.Geo.

10.0 CERTIFICATE OF QUALIFICATIONS

I, R. Allan Doherty, hereby certify that:

1. I am a consulting mineral exploration geologist with AURUM GEOLOGICAL CONSULTANTS INC., 106A Granite Road, Whitehorse, Y1A 2V9.
2. I am a graduate of the University of New Brunswick, with a degree in geology (Hons. B.Sc., 1977). I attended graduate school at Memorial University of Newfoundland, 1978-80. I have been involved in geological mapping and mineral exploration primarily in the Yukon continuously since 1980.
3. I am a "Qualified Person" as defined in Sec 1.2 of National Instrument 43-101.
4. I am a member in good standing of the Association of Professional Engineers and Geoscientists of the Province of British Columbia, Registration No. 20564, and have been registered as a Professional Geologist since 1993.
5. I the author of this report on the Peanut 1-28 Claims. The report is based on fieldwork conducted in 2007 under the author's supervision and on published assessment reports and company files.
6. I am the author of all sections of this report
7. I am not aware of any material fact or material change with respect to the subject matter of this technical report, which is not reflected in the technical report, the omission to disclose makes the technical report misleading.
8. I am independent of the Issuer and have no direct or indirect interest in the properties or securities of BCGOLD Corporation or affiliated companies, nor do I expect to receive any.
9. I have had direct involvement with the exploration programs conducted on the area discussed in this report.
10. I have read National Instrument 43-101 and Form 43-101F and have prepared this Report on the Peanut1-28 in compliance with this Instrument and Form 43-101F1.

"R. Allan Doherty, P. Geo."
