DAWSON MINING DISTRICT

AUTHOR OF REPORT SHAWN RYAN

WORK PERFORMED JUNE 05 to OCTOBER 15, 2007

DATE OF REPORT JANUARY 15, 2008

TABLE OF CONTENT

SUMMARY

The IND Project has seen 41.6 kilometers of grid work, 38.2 kilometers of Magnetic survey and 533 soils collected during the 2007 field season. The crew consists of Adam Fage, Jeremy Duplisea, Matthew McHugh, Issac fage and Joe McCann. The exploration program was successful in extending the 2006 gold soil anomaly.

1.0 INTRODUCTION

The IND 1-42 will be renewed for 5 years..

2.0 LOCATIONS AND ACCESS

The IND 1- 42 claims are located on NTS 115 O / 13 in the Dawson Mining District. The Property lies 25 kilometer southwest of Dawson City, Yukon. The claim block covers part of the head waters of Jim and Bertha Creek. Access is via pick up truck. The property has a road traveling right threw the middle. The road can be reached traveling up the Bonanza Road to French Gulch. A road parallel the north side of French Gulch and continues right to the property and be on to a placer miner camp located on the Indian River.

3.0 PROPERTY DESCRIPTION

The Property consists of 42 full Quartz mining claims, which are registered in the Dawson Mining District. The Property covers 1449 hectares or 2100 acres.

4.0 PHYSIOGRAPHY

The property lies between the elevations of 3000 feet and 3700 feet. The property is covered with boreal forest vegetation such as white spruce and poplar on well-drained soil and black spruce on poorly drained frozen north facing slope. The ridge top is open with only low lying willow shrubs.

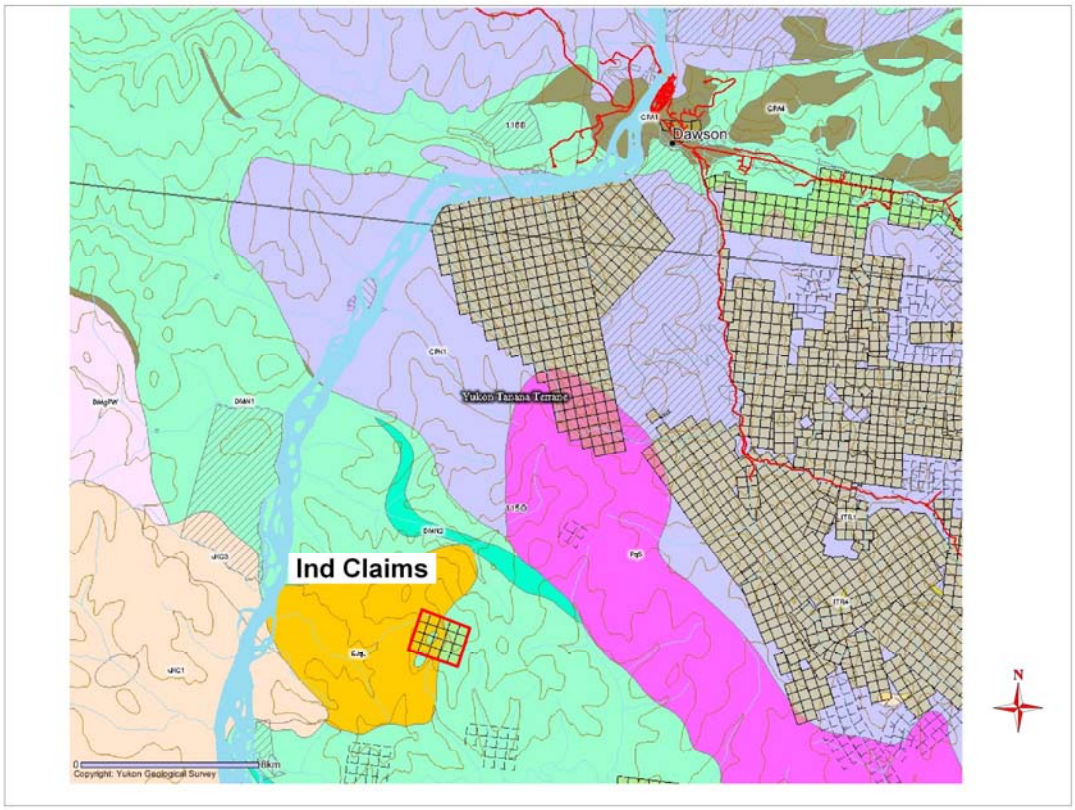
5.0 REGIONAL AND PROPERTY GEOLOGY

5.1 REGIONAL GEOLOGY

Regionally the IND Property is underlain by Early Jurassic(YTG Geology Map) or Permian (Jim Mortensen new dates) Jim creek Pluton that Intrudes DMN1 which consist of Devonian, Mississipian Nasina Assemblage. The Nasina Assemblage consist of dark grey to black, fine grained graphitic and non-graphitic quartzite, grey micaceous quartzite and quartz muscovite schist.

5.2 PROPERTY GEOLOGY

I had three geologist Mike Burke (YTG geologist), Hanna Paulsen (Underworld geologist), and Jack DeMarchi (Full Metal geologist) spend a day on the IND Project evaluating the area for it gold potential. The majority of the gold soil anomalies have come from the Jim Creek intrusive. The Jim Creek intrusive is more extensive than previously mapped by YTG geology map.



6.0 WORK PERFORMED / METHODS

6.1 Grid Work

A total of 41.6 kilometers of grid was established using Garmin GPS 76 instruments. The beauty of Garmin 76 GPS is that they have a left right function and can keep you right on track within a ± 5 meters error. Station where flagged at 25 meter station spacing using Artic orange flagging tape and marked with black permanent markers as to the line and station co-ordinates. In total 1664 station where established.

6.2 Magnetic Survey

The magnetic survey was conducted across the entire grid. The survey uses two GEM magnetometers. One is the portable field unit and the second is a base station magnetometer that records reading every 5 seconds at a stationary position for the entire survey. The base station monitors the earth daily magnetic drift. At the end of each daily survey both the field and base station magnetometers are plugged in together and the daily drift is corrected out of the field mag.

Only the corrected data is used to plot the survey results. The field survey used the walking mag mode which takes reading every 1.5 seconds. This is equivalent to a reading every 1-2 meters. This new type of survey works in conjunction with an internal GPS so every magnetic reading now has a GPS reading. This creates a lot of data with about 120,000 reading compared to about 3000 readings at 12.5 meter station spacing.

6.3 Soil Survey

The IND Project had 27 man days of soil work collecting 533 soils.

All soil sample where taken with one meter soil probes and sometime with a prospector pick. We carried both on rocky talus slope. Soil sample location where marked on the ground with orange flagging and recorded in Garmin GPS. About 400-500 grams of soil was collected and place in well mark kraft soil bags.

All samples where brought out to Dawson and air dried repacked in rice bags and sent to Acme Labs in Vancouver. Sample where process with Aqua Regia ICP-MS for 36 elements.

.

The GPS where downloaded every night and store in a personal computer.

7.0 INTERPRETATION

7.1 Magnetic Survey

The magnetic survey was very useful as it help with the regional structural interpretation.

I have plotted out the gold point anomaly over the magnetic map (Figure 5) and you can see how both gold anomalies are correlating to the magnetic high areas.

Another thing that stands out is the large gold anomaly sitting on the western edge of the property is covering only the southern lower intensity Magnetic high Anomaly A and not the extreme magnetic high area. This must be caused by bedrock but the exact nature I am uncertain.

In Figure 6 I have broken the magnetic map into two separate magnetic high areas called Anomaly A and B. I have also drew in what seems to be a large magnetic low feature that running in a north northeast trend with a potential regional east west trend that seem to be crossing both magnetic high anomalies,

7.2 Soil Survey

The 2007 soil survey combined with the 2005 and 2006 soil survey indicates two major gold soil anomalies. The larger of the two is located on the west part of the grid and it is oval shape and measures 1200 meters by 900 meters. The Second Gold anomaly is more linear and is sitting on the eastern part of the grid and it measures 900 meter by 300 meters at it widest location

I feel the IND geochemical signature is revealing an new granite related gold target. If you look at Figure 3 I have plotted out gold point values over bismuth soil grid-ded map. You can clearly see the bismuth correlation. In Figure 4, I have plotted out gold point value over lathenum and now you see how both gold anomalies have being separated and again a very clear correlation. When we ground truth some of the soil anomalies we did not find any mineralized rocks but each of the two large gold anomalies are sitting in the Jim Creek pluton.

8.0 RECOMMENDATION

I would recommend a trenching program with a large hoe. With road access it would be easy to quickly evaluate both gold anomalies.

10.0 COST

Grid Work 41.6 KL @ $150.00 per KL		$6,240.00
Magnetic Survey 38.2 KL @ $250.00 per KL		$9,550.00
Wage Soil sampling 27 man days @ $330.00 per day		$8,910.00
Food Allowance 27 man days @ $35.00		$945.00
Assay Cost 533 soil @ $20.00 per sample Includes pre marked kraft bags, flagging, Drying packing samples and shipping cost to Vancouver.		$10,660.00
Truck + Gas 10 days @ $190.00 per day		$1,900.00
Sat Phone rental		$150.00
Claim Staking 2 man days @ $330.00		$660.00
Report writing		$1000.00
	Total	$40,015.00

11.0 QUALIFICATION

I Shawn Ryan located in Dawson City, Yukon work as a professional prospector. I run a small exploration company located in Dawson City.

I have worked in the exploration business for the last 25 years. I worked the first 12 years as a contractor working on numerous projects in the NWT, Ontario, Quebec and the Yukon. I have worked the last 10 years as a local prospector for myself.

I have overseen the entire IND Project

I own 100% of the IND claims.

Dated this 15 of January 2008 in Dawson City, Yukon.

Respectfully submitted

Shawn Ryan
