Introduction

This report gives a description of the geological exploration work on the **Upper California Creek Project**, in the Yukon Mining Incentives Program (YMIP). Contribution Agreement # 08-005 was signed on May, 22 2008. This report made by the applicant, Leonid Reshetov, with the participation of Alexander Reshetov and Vasily Reshetov.

The project was conducted in the time span from 6 June 2008 to 15 July 2008 (40 days), despite adverse weather conditions - abnormally rainy summer. No amount of work done by the 3-man, where constantly on the site are:

1) geologist Leonid Reshetov;

2) consultant Professor Abrol Kakharov;

3) prospector Alexander Reshetov.

Upper California Creek Project has been drawn up taking into account the requirements set out in the YUKON MINING INCENTIVES PROGRAM GUIDEBOOK, to stage Target Evaluation. The amount of planned work based on the alleged 06 July 2007, Proposed Work Program, by Placer Prospecting Lease: test trenches by hand or small excavation, or hand shafting. Proposed method of sampling and evaluating sites: hand panning to test or small sluice (see appendices).

Budget of Upper California Creek project, except for the production of excavation, also included the cost of sampling and chemical analysis of 40 samples. The duration of the work was planned in 40 days, by 2-3 people. The total projected cost of $ 40,390.00

The actual amount of work by the number of manually excavated pits, trenches and described the geological sections (natural cliffs shore valley) is generally higher than envisaged in the project. It was taken more than the planned number of samples (100 instead of 40) and sent to Toronto for chemical analysis. We could not at the right time to rent the necessary equipment (small excavator, small bulldozer) in Dawson City. For the future, we will respect that, the lease must be to conclude early in March or April.

To purchase the necessary products, tools and supplies for field works, travel to Dawson City about once every 10 days. Used leased transport and some of the equipment, these costs are taken into account in accordance with the "Guidelines for Rental / Other Rates relating to YMIP claims".

In addition, continued research on the neighboring areas, and other tributaries of California Creek, on the watershed along the road leading to the site from the highway "Top of the world". We find interesting samples of rocks, the search for areas of sulphide mineralization and gold ore. Based on the information received, further studies are planned.
Was in constant contact by e-mail to employees Yukon Geological Survey in the person of Steve Traynor and William LeBarge.

William LeBarge twice visited our site: the first visit took place in the second half of July 2008, when he came by helicopter, and second, in early August 2008, when he traveled by car. We are very grateful to him for his valuable advice on the exploration work, planning for future research in this area, friendly support in the difficult living and working in the field camp in the mountains of the Yukon.

Our work is progressing well, thanks to the professional support that we constantly had from Steve Traynor, a great thanks to him.

Offer special thanks to Professor Abrol Kakharov have lived with us in the mountains, in a tent, under bad weather conditions over 40 days, be very physical in the works, and most importantly - the invaluable assistance as a scientific consultant. Planning studies, the sampling methodology, comprehension of the information received, assessing the prospects for gold mining in our study area - this is not far from a complete list of its recommendations and comments of experts of the highest qualifications in the field of gold mining.

In total, our group was held at the Yukon, more than 4 months from the date of arrival from Toronto to Whitehorse on 22 May 2008, and I went to Toronto on 17 September 2008. My son, Alexander Reshetov, worked in as Prospector entire period of our field work in summer 2008, left to live and work in Whitehorse.

In 2008, managed to make the first serious steps towards the development of our business and achieve the goal - the organization of industrial production of gold in the Yukon.

1. Brief description of location, geology, topography and climatic conditions in the area of operations

The site is located in valley California Creek, left tributary to the Sixtymile River (Photo #1), on distance of 50 km to a southwest from Dawson City. To reach the location it is possible using a ferry connecting Dawson City with HWY*2 “Top of the world” for leaders to Alaska to the USA. On 74 km of highway, turn on soil road going on a crest and slopes of mountain river valleys follows. The distance up to a site makes 14 km. (map #1)

Photo 1.

The staked out site is in head of California Creek and to east from merge western anonymous inflow to California Creek, in a place of turn of watercourse California Creek in a direction from the West on the South. (map #2)

In 2008, we worked in the valley California Creek the entire season, which may work with only a tent camp, the last of the snow last winter before the first snow of the forthcoming winter. The first attempt to pass on the station in late May, was unsuccessful, because the road leading from the highway to the valley in places still lying deep snow and our truck 4x4 was not able to pass (Photo ##2,3).

We arrived at the site of only 6, June. Since mid-June began the frequent rains and the road became difficult. After the rain 1, July, which came about 30 hours, the volume of water in the line California Creek increased at least 5 times (Photo ##4,5). Rain hampered the production and excavation, and a trial for the washing of gold tray, the movement of the stream valley, crossing the creek. Old snow lying on the banks of California Creek till the end of June. Less rainfall was in August and September, three times this summer it hails large size (Photo ##6,7). In September, already cold to live in unheated tents.

Below are used materials from Yukon Placer Database of Yukon Geological Survey are resulted:

Stream: **California**
Tributary: **Sixtymile**
Mining District: **Dawson**

General Comments

California Creek is a left limit tributary to the Sixtymile River downstream of Twelvemile Creek.

Work History

In 1918, some prospecting has been done on California Creek, and good values are claimed, but no mining has, so far, been done.

Landforms

Landform	Comments
Alluvial Valley	

Glacial Limits

Unglaciated

Bedrock Geology

At the Boundary and down the valley to Bedrock Creek, the rock consist principally of igneous shists of various kinds, largely granite-gneisses, with which are associated some quarztites and other clastic shists. These shists constitute the gold-bearing rocks. In the places these pebbles become very abundant and the rock may be classed as a conglomerate with a friable sandy matrix much resembling mortar. At the head of California Creek, heavy beds of a compact indurated conglomerate occur, overlain by loose sands and gravels, probably derived, in part, from the from the destruction of the conglomerate. The pebbles consists of quartz, quartz-mica shists, mica shists, and vary in diameter from 1 to 6 inches. The pebbles are embedded in a matrix of quartz and mica, and the rock probably owes its indurated character to the infiltration of siliceous solutions as a result of the extrusion of volcanics close at hand. The sediments are always friable and slightly coherent, except where they have been invaded by, or are close to, masses of igneous rocks.

Though the absence of fossils makes beds age difficult to determine, their structural relations show their participated in the movement of Yukon Plateau prior to its uplift and subsequent planation. This beds are considered to be pre-Miocene. Never Volcanics - name was applied to cover a series of andesites, diabases, basalts, and allied rocks of Tertiary age. Several areas of similar rocks in Sixtymile district have been provisionally assigned to these group. The largest lies in the vicinity of the creeks producing placer gold along Sixtymile River between Bedrock and Fivemile Creeks. On the head of California Creek it outcrops.

Field Name: Wilshire Mortgage, 1985

Work History

1985- A rotary drill program, completing 1,215 feet in 61 holes, was undertaken. Frozen silt and gravel were encountered down to bedrock, which averaged 6 to 10 feet, but ranged as deep as 30 feet. Samples were taken every 2 feet and nearly all intervals contained gold. The highest value assayed for gold (screened to minus 12 mesh) was 0.0229 ounces per ton taken in the 2 feet above bedrock at a depth of 16 feet. Six samples contained nuggets plus 2 mesh or greater in size, but these were not associated with any fine gold.

The area, where work on the project, has the geographic coordinates:

64 º 6.25 '÷ 64 º 7.5' latitude and

140 º 21.4 '÷ 140 º 16.8' longitude.

GPS coordinates of posts Post # 1 (Photo 8) and Post # 2 (Photo 9), the location of exploration pits, ditches, trenches and sampling locations are presented in the table and put on the scheme.

Photo 8.

Photo 9.

The main Camp #1 was near a road in front of a merger California Creek with nameless right tributary, where the borders of neighboring sites. Camp #2 was placed near the Post # 2 there postponed products, equipment and fuel pump and chain saw. Camp # 3 was at the partner Abrol Kakharov site, where the trailer delivered there in 2007.

Photo 11.

Photo 12.

Some things, tools and equipment brought in 2007 were stored over winter in the trailer Camp # 3 (Photo 11,12).

Photo 13.

Photo 14.

We had to buy a lot of plastic tarps to protect against rain and equip shelters in all the camps (Photo 13÷16).

2.2. Description of the coastal cliffs

The Photos 31 ÷ 34 are presented exploration near POST # 2, located near the border with neighboring sites, at the junction with the right influx of California Creek, located 20 minutes walk from the main Camp#1. Since the equipment for exploration (the pump, small sluice, tools, fuel) here porterage done manually, with great difficulty, this place was a more detailed examination of the geological conditions. There was a camp in the interim from the canopy of rain and food.

Photo 31.

Photo 32.

Photo 33.

Photo 34.

For example, here are descriptions of typical sections sediments Upper California Creek.

The first exposure in the area POST2, about SHURF1, brook makes bending at an angle of 90 º (Photo 32). Under the precipice Bank was dug ditch 5m length, width 1m, a depth of about 0,5 m to the water and bedrock (Photo 34).

Left Bank (orographically) before it folded exposing the bedrock shale with rare quartz veins (milk color) without visible mineralization, power up to 10cm. Fracturing shale is the angle of declination of about 45 º (Photo 33). Following the stream bedrock outcropping, the small island of rocks sticking out of the water on the bend of the course, form a stone «brush».

Right Bank, which forms the inner bend angle channel - bluff. At fir stump, located on the breakage of the coast, counting the annual rings allows roughly estimate the age of a tree in 100-120 years. Under the surface vegetation cover, at a depth of 30cm, there is a layer of gravel from the rubble size from 0,5 up to 5cm (rare wreckage more than 8cm in diameter), the thickness of the layer of about 10cm. Then a layer of soil with fine sand and clay, the thickness of about 20cm, below a layer of large sand (debris gets up to 0.5 cm) thick layer of 10cm. Here sand-clay layer capacity of about 50cm, underlying layer of gray clay to 15cm. Next layer of gravel and pebbles from the rubble of up to 10cm, its power of 15-20cm. Deeper begin boulders the size of 20 to 45 cm in diameter, along with the bulk of the stones, the size of 10cm. Depth of large boulders about 1.2 meters (one of the boulders the size of 40cm x 40cm x 50cm). At a depth of 150 cm met fragment «brushes» bedrock. At a depth of 175sm water ooze - the level of the river (Photo 31-34).

The second is described outcrop located near the confluence of California Creek first right tributary.

The width of an average influx of 1m, at 50m from the merger of riverbeds.

Steep bank had previously been cleared shovels. Output layer of roots and plants more than 40cm.Below narrow to 10 cm thick layer of river chips weakly balled material to the size of the stones to 5cm across. Then, sand and clay layer 30-40cm. A layer of gravel capacity to 10cm. Sandy clay layer 5-10cm. Here, rubble from the wreckage of the larger 10-15cm in diameter. At a depth of about 1,5 m of sand and clay layer of black (gray-black) color, characteristic of the layers of permafrost, the power of 10cm. Under him rusty-brown arenaceous - detritus layer shale’s rubble.

The third is described outcrop located near the confluence of California Creek the second (from the beginning of the site POST2) left tributary.

The width of the inflow (water), on average, 1m. Clastic material put by influx are chips weakly balled material. The size of the wreckage of 5-10 cm rarely come across the wreckage more than 15cm across. Between riverbeds cape with creeping Bank. The ditch filled 6m in length and entered the river.

A layer of peat thick and 15cm. Here, alternating layers of small (up to 10 cm) of old river sediments «rusty» color, consisting mainly of weakly balled chips material. Biggest (rare) fragments to 10cm in diameter from shale, quartz. Before the water level of the new channel, thickness of the old river sediments to 1.2 m. At a distance of 3m from the cliff described a growing spruce with thick stem at the base of a 45cm in 5m of it, another is the same spruce. The width of the valley of California Creek here from 100m to 150m, at the confluence of the bed with the right width of the influx of more than 200m.

On the right bank of California Creek, around the middle of the site, is rock outcrop. Bedrock represented by schist dark-gray (nearly black) color and brownish-gray color. There are quartz veins with thickness up to 20cm. Height rock cliff about 20m (Photo 35,36).

On the way passing the site, in many places washed samples for the presence of gold using a pan (Photo 37,38,39).

The Photo 41,42 show of the melting of permafrost, where landslides and soil erosion processes. Right (orographically) bank, a distance of 50 meters of water California Creek.

Photo 35.

Photo 36.

Photo 37.

Photo 38.

Photo 39.

Photo 40.

Photo 41.

Photo 42.

2.3. Pits (shafts), trenches, ditches

It was manually dug trench size 2,5 m x 8m x 1.5m deep (place determined by taking into account the best form of relief for manual digging) (Photo 43,44,45).

Photo 43.

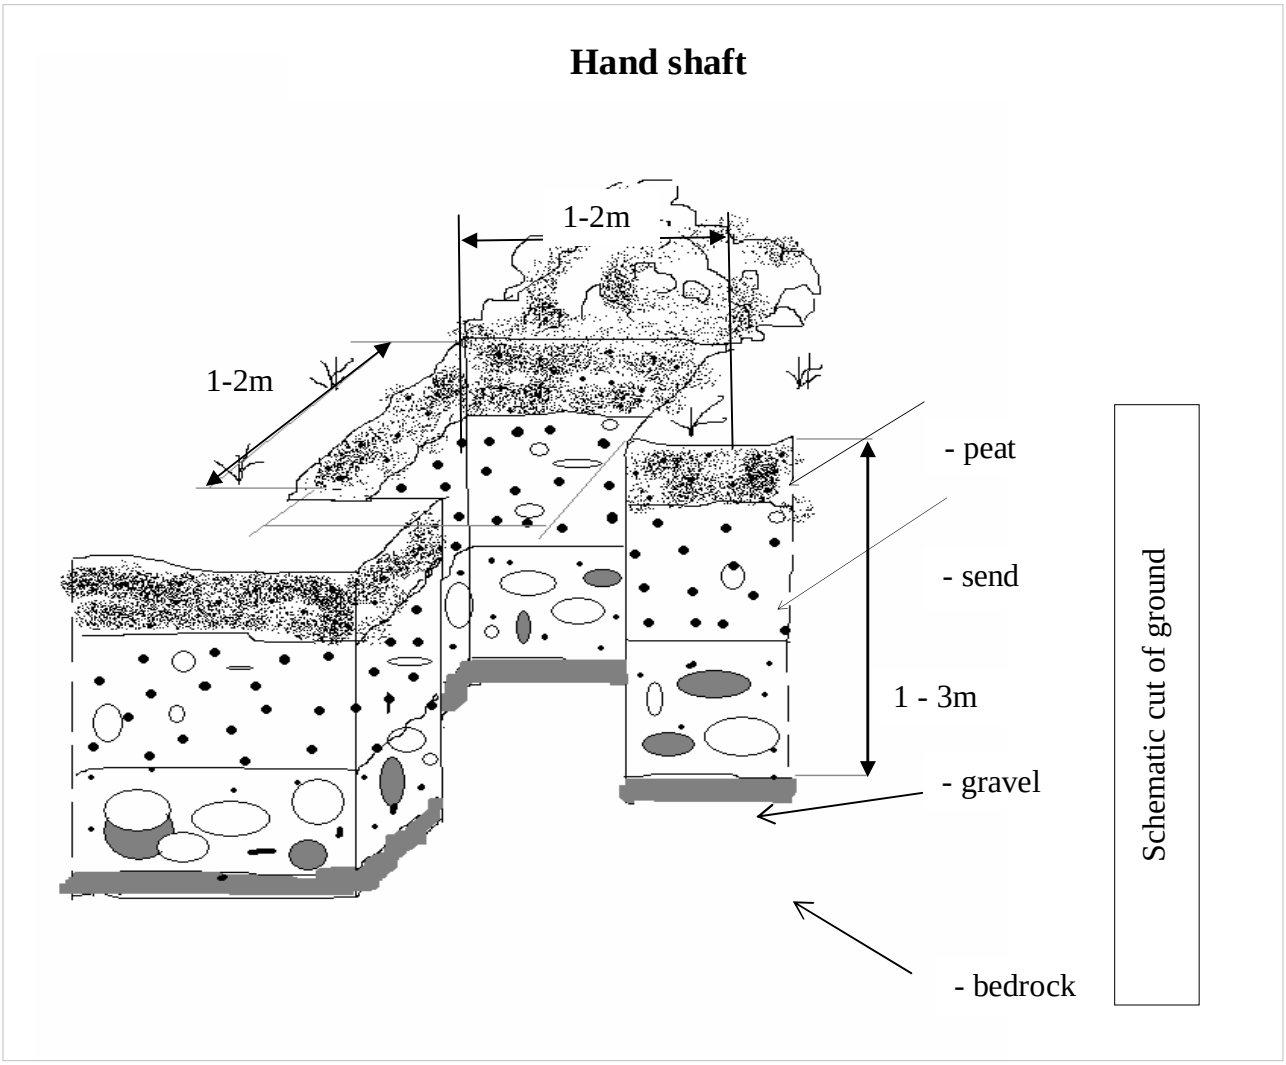
Photo 44.

Photo 45.

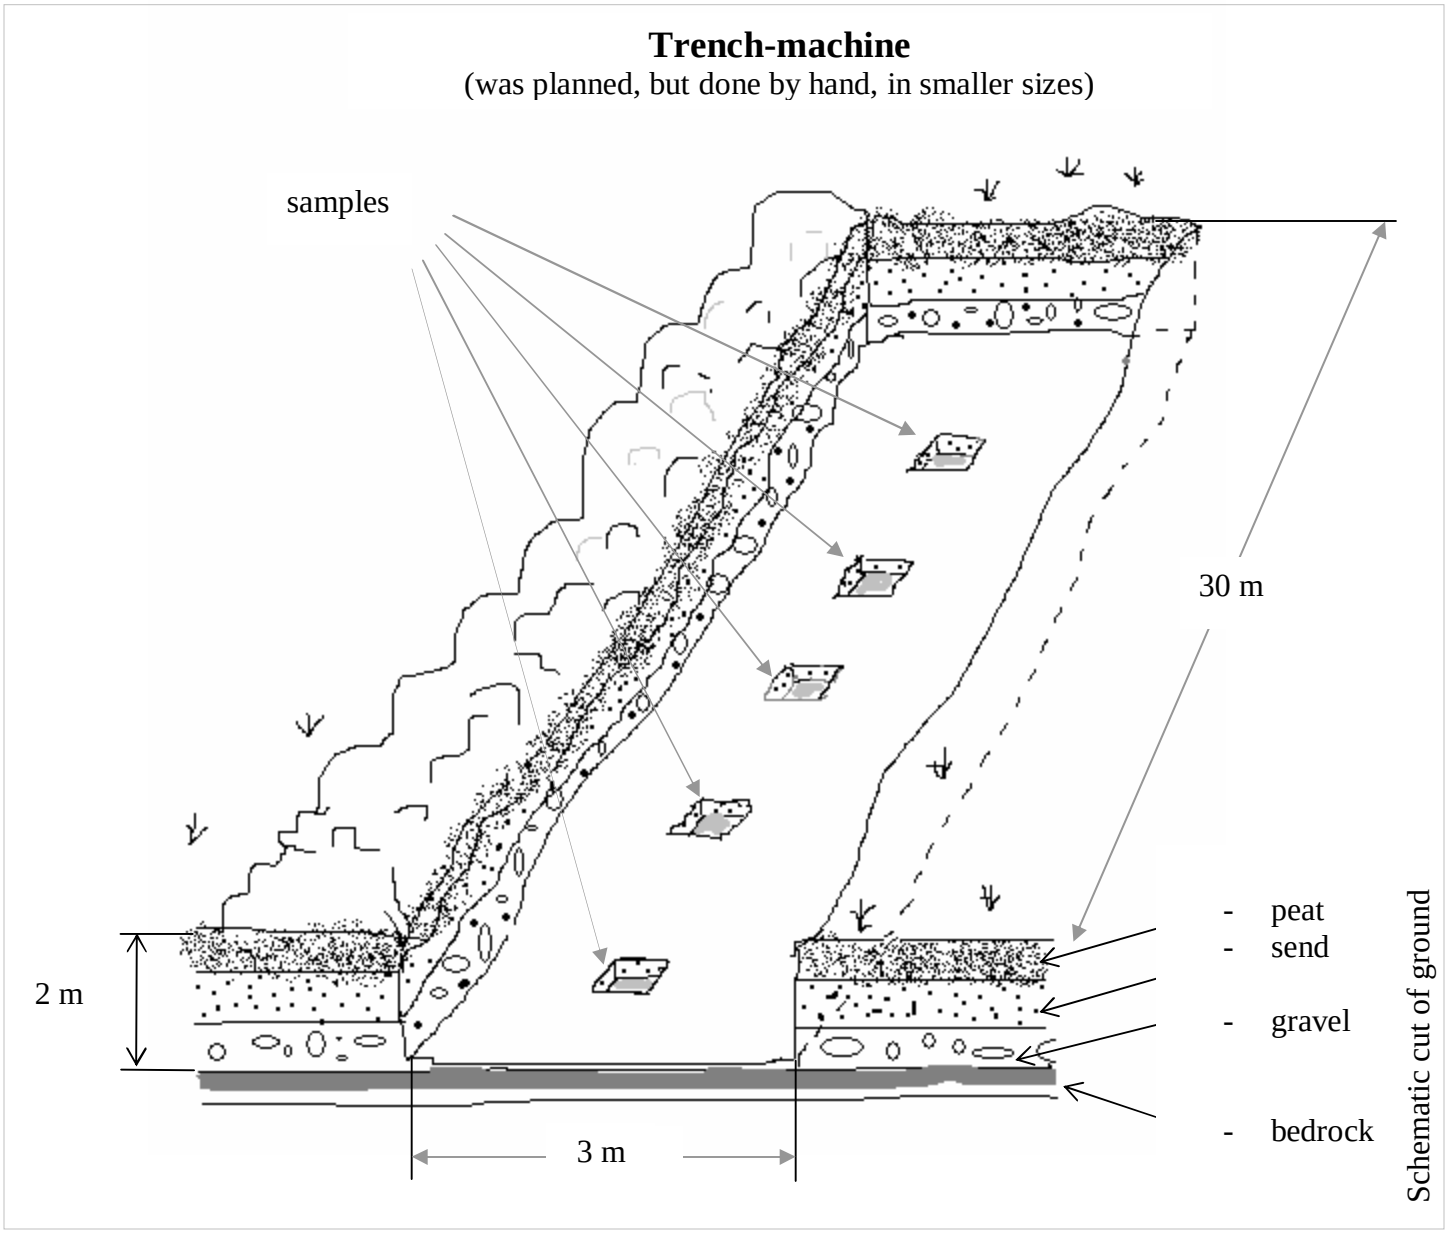
Photo 46.

Samples taken from various depths and from the bottom of the trench. For averaging is used pit situated not in the line number as in **Picture #3**, but in the form of «envelope» (Photo 46) **Picture #4** . Dug pit to shelf, the depth of about 2m from the surface. Dug ditch longer than 5 meters in the foothills of the coastal cliff. Made a detailed description of the section.

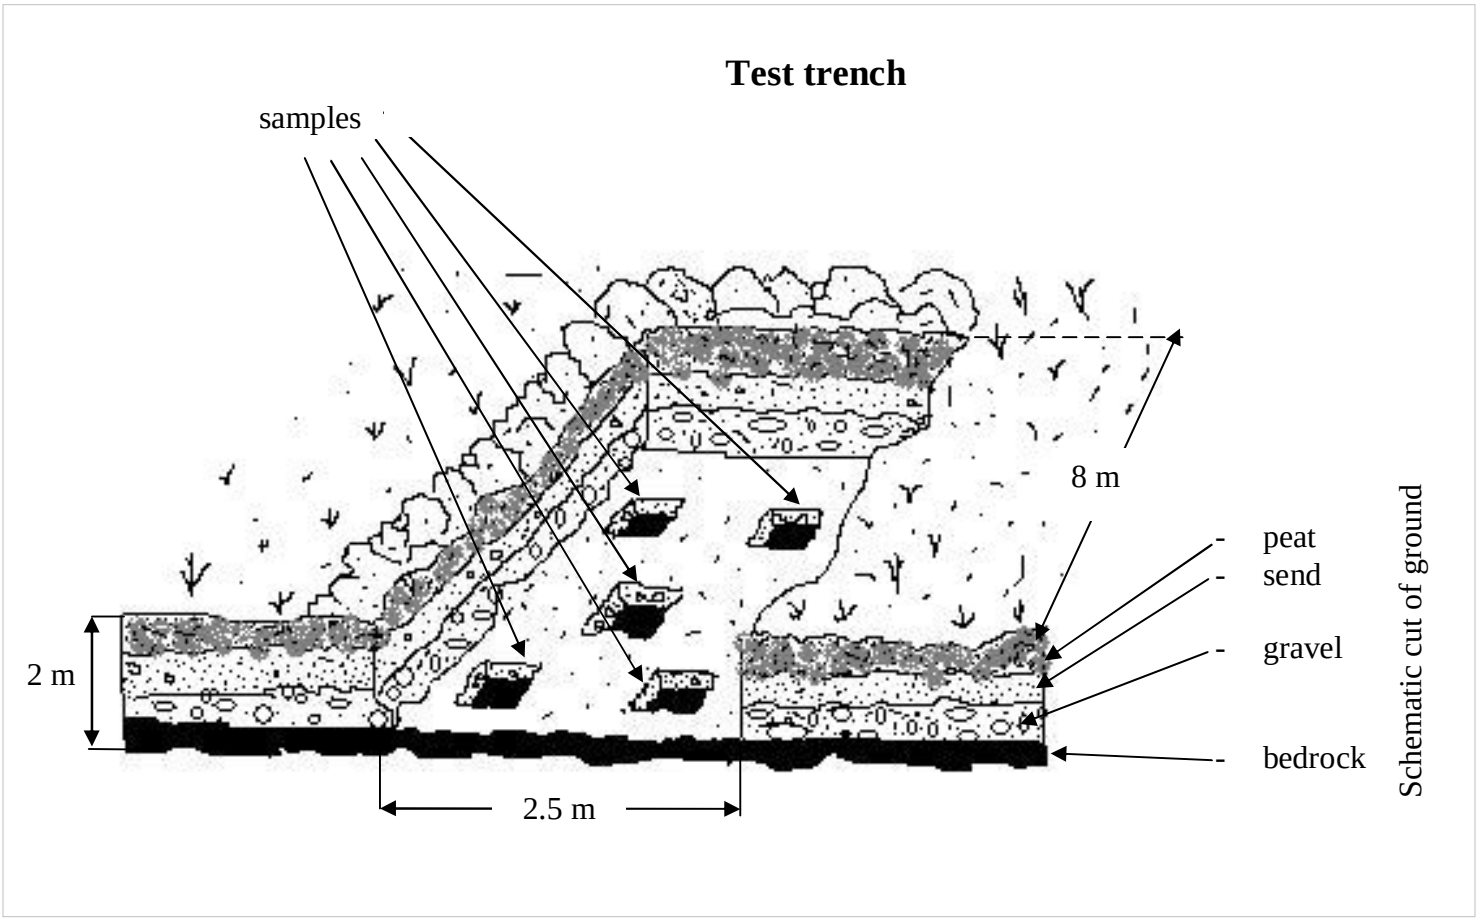
This is one of the characteristics, the stream valley to California Creek in its upper reaches, sections of soil. Power sediments (over the shelf) 1,5 ÷ 2 meters. Interchange layers of rock debris of varying size and degree of rounding. Were selected for chemical analysis of samples of each layer. When washing a tray in each layer of gold particles are found in most small, floating, flat (scaly) form. When the pilot washed using small gateway, the content of gold, on average, less than 1 gram per tonne. At the bottom of the section on the shelf above the gold content, but only at this site. The size of the area enriched plot could not be.



Picture #2. The schematic image hand shaft.



Picture #3. The schematic image trench-machine and sequence of sampling (schematic display of the order of sampling).
(was planned, but done by hand, in smaller sizes)



Picture #4. The schematic image test trench and sequence of sampling (schematic display of the order of sampling ”envelope”).

2.4. Sampling, granulometric analysis

Photo 52.

Photo 53.

Photo 54.

Photo 55.

Photo 56.

Photo 57.

Photo 58.

Photo 59.

Photo 60.

Granulometric analysis.

Dropped out of rock was carried out using a set of sieves with 2, 4, 8, 20, 50, 100 mesh. The latest story, the past 100 mesh sieve. Is defined as -100 mesh.

To determine the **volume ratio** (in%%) of soil on the size of debris and soil particles taken 100kg:

1. 2 mesh sieve.	35 %	30 %	35 %
2. 4 mesh sieve.	20 %	20 %	18 %
3. 8 mesh sieve.	14 %	15 %	15 %
4. 20 mesh sieve.	12 %	12 %	12 %
5. 50 mesh sieve.	10 %	10 %	10 %
6. 100 mesh sieve.	8 %	8 %	6 %
7. -100 mesh material.	4 %	4 %	4 %

Weight ratio divided by size of ground (crushed rock, gravel) in the quantity of 20 kg:

1. 2 mesh sieve.	18kg	17.55kg	16.15 kg
2. 4 mesh sieve.	1kg	1.20kg	2.00 kg
3. 8 mesh sieve.	500g	450g	1000g
4. 20 mesh sieve.	250g	300g	350g
5. 50 mesh sieve.	100g	300g	250g
6. 100 mesh sieve.	30g	150g	200g
7. -100 mesh material.	15g	50g	50g

Determination of particle size distribution of rock debris was carried out in order to select wash equipment for the washing of the planned trial next year.

Samples have been collected (Photo 61 ÷ 64), the most typical and frequently occurring at the site, the wreckage of various types of shale, conglomerates, breccias, quartz. But in addition, were found on the neighboring land samples of serpentinite (Photo 64) and even shatter of obsidian (Photo 63).

The Photo 65 ÷ 68 shows the samples of particles of gold found in the experimental washing ground at the site of work.

Photo 68.

Photo 65.

Photo 67.

V. Conclusions and recommendations

Exploration work conducted on the Upper California Creek project YMIP the summer of 2008 confirmed the gold sector. The maximum content of gold in the studied areas a little more than 1 gramm per tonne estimated.

Requires good equipment for sluice, can collect small floating gold. The economic advisability of industrial gold mining in need of additional calculations and will also depend on the current world price.

In the summer of 2009 is scheduled to scribe the claims for the gold mining of the valley from the border with neighboring areas, in the middle part of the site and part of the valley at the end of the site.

There is a need to explore for gold on the sides of ancient valleys, on the slopes of the modern river California Creek, to search for buried mines.

Of great interest is the study of right unnamed tributary California Creek, where in late summer 2008 staked site 3-mile length. Will be prepared a similar project in the works YMIP in 2009.

Unfortunately ours own financial capabilities are not yet allow for more extensive research. But, thanks to financial support from the Government of Yukon in YMIP, we hope in the next few years to have good results on the development of gold mining business.

A huge thanks to all workers in the Yukon government departments for their help and support.

IV. Expenditure

Expenditure in the Upper California Creek Project on the program YMIP were made as follows:

1. Daily Living Expenses 40 days x $35.00/day x 3 persons = **$ 4,200.00**

2. Travel

Truck 2,210km x $0.61/km = **$ 1,348.10**

a) Whitehorse – Dawson City	536km	27,May,2008
b) Dawson City – California Creek	93km	06,June,2008
c) California Creek – Dawson City	93km	
Dawson City – California Creek	93km	10,June,2008
d) California Creek – Dawson City	93km	
Dawson City – California Creek	93km	17,June,2008
e) California Creek – Dawson City	93km	
Dawson City – California Creek	93km	27,June,2008
f) California Creek – Dawson City	93km	
Dawson City – California Creek	93km	07,July,2008
g) California Creek – Dawson City	93km	16,July,2008
h) Dawson City – Whitehorse	536km	17,July,2008
i) between the camps, in Dawson City	200km	
Total:	2,210km	

3. Analyses/Assay Cost **$ 2,434.69**

Shipping **$ 118.96**

4. Equipment Rentals **$ 2,960.00**

Including: a) Truck 4x4	1 Month	$1,980.00
b) Pump 3"Trash	1 Month	$ 530.00
c) Chainsaw	1 Month	$ 450.00

5. Contractors (name and type of work)**:**

Prospector LEONID RESHETOV 40days x $350.00 = **$14,000.00**

Sampler ALEXANDER RESHETOV 40days x $325.00 = **$13,000.00**

6. Report preparation **$ 2,000.00**

7. Other Expenses **$ 537.06**

Field supplies: including tarps, gloves, flare pistol, maps, first aid kit, radio (MOT GMRS 26km), tapes, stationery, aerosol insecticides, etc.

TOTAL EXPENSES: **$40,598.81**

Interim Claim #1 Submitted on September,5 2008

Amount reimbursable prior to Final Submission Form&Report $15,000.00 was received 09.30.2008

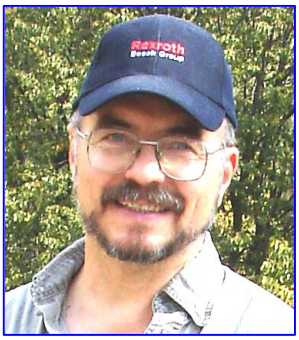
A P P E N D I C E S

R E S U M E

Leonid Reshetov



Eng. (Geophysicist), M.D.

Education:

1992 **State Committee of statistics and Ministry of Labor**
Courses: programming on personal computer.

1978 **Kazakh Polytechnical Institute**
Specialty: Geophysical methods of survey and exploration of mineral fields. Qualification: mining engineer - geophysicist

Work Experience:

2006 – present Yukon, California Creek. Prospector

2003 – 2005 Limited Liability Company "YugSpetsAvtomatika-KMV" (Pyatigorsk, Russia). Leading specialist, scientific consultant

1999 - 2002 Center of Geophysical and Geo-ecological Researches "GEON" (Moscow, Russia). Geophysicist of 1st category (stable work of the equipment and uninterrupted receiving of the data for estimation of geodynamic state of the earth's crust at monitoring seismic supervisions; providing of uninterrupted activity of seismic ground in district of Caucasus Mineral Waters).

1998 – 1999 Limited Liability Company "YugSpetsAvtomatika-KMV"(Pyatigorsk, Russia). Manager (conducting marketing researches of the market of petroleum product in the south of Russia, preparation and conclusion of the agreements on deliveries of large consignment of petroleum product for construction and repair of highways).

1995 - 1997 Limited Partnership "Don" (Taganrog, Russia). Deputy marketing director

1993 - 1994 Kazakh-Malta Joint Enterprise "Asia-Grid" (Almaty, Kazakhstan). Commercial director

1992 – 1993 Kazakh Republican Council of Tourism and Excursions (Almaty, Kazakhstan). Main instructor

1990 - 1992 Institute of Ionosphere of the Kazakh Academy of Sciences (Almaty, Kazakhstan). Scientific Station Head

1990 - 1990 Scientific-Research Institute of Geophysics. Research officer (Almaty, Kazakhstan). Leading electronics engineer of the laboratory of nuclear logging and testing

1985 - 1990 Institute of Physics of Atmosphere of the Russian Academy of Sciences (Moscow, Russia). Engineer of the 1st category; Senior engineer of the mountain scientific station

1979 - 1985 Kazakh State University named after Kirov S.M (Almaty, Kazakhstan). Senior engineer (chair of radioactive radiation)

1978 – 1979 Institute of Geological Sciences of the Kazakh Academy of Sciences (Almaty, Kazakhstan). Engineer

DIPLOMA

Г-I № 242240

This diploma is given to Reshetov, Leonid Mikhailovich to certify that in the year of 1973 he was admitted to the Kazakh Polytechnic Institute named after V.I. Lenin and graduated in the year of 1978 from the above mentioned Institute with full credits in "Geophysical methods of survey and exploration of minerals fields"

He is awarded the degree of Mining Engineer – Geophysicist by the decision of the State Examining Board on June 21, 1978.

Annex to Diploma Г-I № 242240

ABSTRACT OF EXAMS/TESTS RECORD (DETAILED TRANSCRIPTION OF DIPLOMA)
(invalid without diploma)

RESHETOV, Leonid Mikhailovich

during his study at the Kazakh Polytechnic Institute named after V.I. Lenin from 1973 to 1978 in the specialty of "Geophysical methods of survey and exploration of minerals fields", passed examinations and tests in the following subjects:

№	SUBJECTS	HOURS	MARKS
1.	History of CPSU(Communist Party of the Soviet Union) -	124	Good
2.	Higher mathematics -	404	Good/ passed; Good/ passed
3.	General Chemistry -	64	Satisfactory/passed
4.	Descriptive Geometry -	90	Good/ passed
5.	Geodesy -	78	Good/ passed
6.	Physical Training -	120	Passed
7.	General Geology -	124	Excellent/passed
8.	Political Economy -	144	Good
9.	Physics -	246	Good/ passed
10.	Civil Defence	54	Passed
11.	Foreign language -	242	Excellent/passed
12.	Essential principles of Scientific Communism -	54	Passed
13.	Crystallography and Mineralogy -	132	Good/passed
14.	Philosophy of Marxism-Leninism -	66	Excellent
15.	Theoretical mechanics -	96	Good/passed
16.	Essential principles of electrical engineering -	156	Satisfactory/passed
17.	Petrography -	92	Good
18.	Essential principles of Resiliency Theory -	60	Excellent
19.	Special training -	120	Good/passed
20.	Geochemical methods of survey and exploration -	70	Passed
21.	Petrophysics	56	Passed
22.	Minerals Fields	90	Good
23.	Radiometry and nuclear physics	120	Good
24.	Electrometry (electrical exploration)	92	Excellent/passed
25.	Regional geology	70	Satisfactory
26.	Essential principles of geology, geochemistry of oil and gas	56	Passed
27.	Gravimetrical and magnetometrical exploration	136	Excellent/passed
28.	Drilling (well-boring)	102	Excellent
29.	Economy of geological works	70	Excellent/passed
30.	Exploration seismology	276	Excellent/passed
31.	Mining and blasting operations	90	Excellent
32.	Safety measures	42	Excellent
33.	Minerals Fields	120	Good/passed
34.	General principles of standardization	36	Passed
35.	Methods of complex interpretation	54	Passed
36.	Studies of boreholes spaces and between boreholes spaces	56	Passed
37.	Programming of geophysical tasks	72	Good/passed

The Tamil Eelam Society of Canada
1160 Birchmount Road, Unit 1A
Scarborough, ON M1P 2B8
Tel: 416.757.6043 Fax: 416.757.6851

Term works:

1. Exploration seismology	Excellent
2. Methods of complex interpretation	Excellent
3. Gravimetrical and magnetometrical exploration	Excellent
4. Radio engineering and electronics	Excellent
5. Industrial engineering and production planning	Excellent
6. Theoretical mechanics	Satisfactory

Practical training:

1. Educational geological practical training	Good
2. Educational geological trip	Good
3. Educational geodesic	Good
4. First educational geophysical	Good
5. Second educational geophysical	Excellent
6. First practical training	Excellent
7. Second practical training	Good

Reshetov L.M. has presented the degree thesis on the theme: "Complex geophysical researches with the purpose of survey of perspective oil and gas structures within an allocated thickness of the interdome zone of the Kusay and Jarkamis domes" and received a Good mark.

35	Методы комплек.интерпретации	54	Зачет
36	Исследования скважин.имеж.скважин пространств	56	Зачет
37	Программирование геофизических задач	72	Хор.зач.
	Курсовые проекты		
1	Сейсморазведка		отлично
2	Методика комплексных исследований		Отлично

3	Гравмагниторазведка	Отлично
4	Радиотехника и электроника	Отлично
5	Орг-я и планир-е произ-ва	Отлично
6	Теоретическая механика	Удовл
	Практика	
1	Учебная геологическая практика	хорошо
2	Учебная геологическая экскурсия	Хорошо
3	Учебная геодезическая	Хорошо
4	1-я учебная геофизическая	хорошо
5	2-я учебная геофизическая	Отлично
6	1-я производственная	отлично
7	2-я производственная	Хорошо

РешетовЛ.М защитил дипломный проект на тему: «Комплексные геофизические исследования с целью поиска структур,перспективных на нефть и газ наделевой толще в межкупольной зоне куполов Курсай Жаркамыс» с оценкой хорошо.
