GEOLOGICAL AND GEOCHEMICAL REPORT ON THE 2012

YMIP-FUNDED EXPLORATION PROGRAM

ON THE SQUID PROPERTY,

MATSON CREEK AREA

DAWSON MINING DISTRICT

NTS: 115N/10

CLAIMS

SQUID WEST 1-66 (YE27237 – YE27266 and YE26955 – YE26990)
SQUID EAST 1-36 (YE26991 – YE27026)

SQUID WEST 511560mE and 7045970mN (NAD83 Zone 7)
SQUID EAST 519120mE and 7049130mN (NAD83 Zone 7)

Field Work Performed Aug 10-15, 2012

Metals Creek Resources

1.0 INTRODUCTION

In August, 2012 a program of soil sampling and limited prospecting/silt sampling was completed on the Squid claims in western Yukon. The program was undertaken to focus on better delineating Au-in-soil anomalies that were outlined by ridge and spur soil sampling completed in 2011. The property is located 80km south-west of Dawson City, Yukon and is 100% owned by Metals Creek Resources (MEK). The claims were staked in March 2011 and consists of 102 units in two separate blocks termed Squid West and Squid East, both located in the Matson Creek/North Ladue River drainage area immediately up-stream from two placer gold operations.

The program was, in part, supported by a grant from the Yukon Mining Incentive Program (YMIP) and commenced Aug 8th, ending Aug 17th using a four-five man crew. The property was accessed via helicopter from Dawson City on a daily basis. Soil samples were taken at 25m spacings on recce-lines laid out at a nominal 100m separation and generally 1km in length. Samples were collected using a one-piece 'Edelman type' soil auger and packaged individually in labeled craft soil bags. During the six days in the field, a total of 988 soils, 5 silts and 25 rock samples were collected. The soils and silt samples were delivered to Acme Laboratories in Dawson City for sample preparation and 36 element ICP-MS analysis.

Results from the 2012 program are outlined in this report and in particular describes a new gold target outlined by a strong gold plus "pathfinder" element soil anomaly coincident with a discrete magnetic low, up-stream from the placer operations on Matson Creek. Identifying the source of this anomaly will be a high priority for MEK.

1.1 Location and Access

MEK owns a 100% interest in the Squid claims situated in the Dawson Range, west central Yukon. The two blocks are located 80 km southwest of Dawson City and within 10 to 15 km of the Alaska border. The project is centered on UTM coordinates 515,000E/7,045,000N (NAD83 Zone 7) on NTS 115N/10. The seasonal Matson Creek Placer operation is located approximately five km south of the two blocks.

Access to date has been via helicopter from Dawson City however road access to the Squid West claim block is possible by an existing access road to the Matson Creek Placer operations. There is also a gravel airstrip within 3 km of the property. The Matson Creek access road originates in the Sixty Mile Creek area which is accessible from the "Top of the World Hwy". The condition of the road has not been evaluated but it has been referred to as a four–wheel drive road. Future work including drilling, if warranted, would take advantage of the road access and airstrip.

1.2 Topography and Vegetation

Squid West- The property sits along a long linear rounded ridge crest above the tree-line with small shrubby vegetation and 5% weathered bedrock. The sides of the ridge are moderate to steep with light to dense alder and dwarf willow growth up to 12 feet in height. Elevations on the property range from 950m in valleys to 1225m on ridge tops. Overburden is generally thin (<1m) and consisting of brown to grey micacous soils and weathered rock chips. On the east facing slopes are patches of rubble/outcrop. Patchy permafrost is present on north and east facing slopes however during the August, 2012 field work the frost was much reduced compared to conditions realized during the original soil sampling in July, 2011.

Squid East- This portion of the property sits within a relatively shallow valley with variable vegetation of dense alder, birch and spruce forest to the south, lumpy grass/moss and black spruce in the center (around creek) and mixed birch, poplar and spruce in the northern third of the block. Borden Creek cuts through the claim block. Patchy permafrost is present on a steep north facing slope on the south side of Borden Creek, as well as in the mossy/grassy low lands surrounding Borden Creek. Elevations vary from 715 to 962m.

In general, the vegetation is more deciduous and denser on south and east facing slopes. Moss, Labrador tea and stunted black spruce dominate the north and west slopes of the area.

1.3 Claim Status

Metals Creek Resources owns four separate claim blocks in the Dawson Range of west-central Yukon and the 2012 field work took place on two of these. These two blocks (Squid claims) are three km apart and total 102 claim units. The claim blocks, Squid West (NTS sheet 115N10) and Squid East (NTS sheet 115N10) are detailed below in Table 1.

Table 1 List of Claims

District	Grant Number	Claim Number	Claim Owner	Claim Expiry Date

2.0 HISTORIC WORK

This portion of the Dawson Range has been covered with regional geology (Ryan and Gordey, 2004), silt sampling (YTG compilation) and airborne geophysics surveys (GSC).

Previous hard rock exploration work is quite limited on the Squid claims. The only recorded private company work consisted of grid work (soil sampling, geophysics) and diamond drilling on a historic base metal showing (Bored Showing) located 500 meters southwest of the Squid West block. The showing is described as "gossanous pyrite/base metal mineralization hosted within quartz-muscovite-sericite schist of the Klondike Schist Group and is thought to have a VMS/Kuroko affinity. Five holes were completed in 1992 with a best intersection of 1.1% Pb, 0.08% Zn, 0.09% Cu, 2.7 g/t Ag and 23 ppb

Au over 4.1 meters. A number of Mineral Prospects from Yukon Minfile, 2004 are located in the region however there is no published historic work available and research continues on these.

Placer operations exist on Matson Creek and North Ladue River in close proximity to the Squid Property. These deposits are located down-stream from the Squid claims and previous production is in the order of 10,000 to 30,000 oz with grades reported up to 0.1 oz/cubic yard

Below is a breakdown of the historic work taken from accessible assessment files:

Squid West-
1977-1978: had mapping, geophysical and geochemical surveys conducted to the southwest and on the southern boundary of the present claim block by a joint venture between American Copper, Nickel Company Inc and Kennecott Copper Corp. Base metal anomalies were generated
1979: additional geochemical surveying conducted to the immediately west of the 77-78' surveying by Ocean Home Exploration Co Ltd.
1990: YGC staked and conducted soils to confirm the anomalies generated by the 70's surveying
1991: YGC carried out detailed geochemical surveying immediately west of the 79' geochemical surveying
1992: YGC conducted road building, line-cutting, geochemical sampling, mapping, prospecting, a Max-Min 1-9 HLEM survey and diamond drilling.
Five holes were drilled totaling 796m, resulting in weakly anomalous base metals values.
2011: MEK ridge and spur soil sampling generated 3 anomalies for 2012 follow-up
Presently: placer operations exist west and southeast of the current claims on Ladue River and Matson Creek respectively.

Squid East-
2011: MEK recce-soils generated 2 anomalies for 2012 follow-up
Santa showing (MINFILE 115N027) is located 3.5km to the south of this block. The showing is polymetallic Ag-Pb-Zn+/-Au veins in Klondike Schist.
No historic assessment work was found for this area.

3.0 REGIONAL GEOLOGY

The geology description and lithological codes are interpreted from Open File 4970, Stewart River map sheet 115N-O, mapped and compiled by Gordey and Ryan, 2004.

The MEK claims are located in the Dawson Range, a non-glaciated region within the Tintina Gold Belt metallogenic province and part of the Yukon-Tanana Terrain. This Metallogenic Belt includes a number of large gold deposits in Alaska (Fort Knox, Pogo, Donlin Creek), the Klondike placer deposits which have produced in excess of 20 million oz gold and the new discoveries in the White Gold District (Golden Saddle, JP Ross, Coffee, etc.).

The underlying geology of the Yukon-Tanana Terrain is characterized by a broad zone of Devonian-Mississippian metamorphic orthogneisses (DMog), amphibolites (DMa) and metasediments (DMps) as well as slightly younger Paleozoic rocks such as the Klondike Schist (Pka) and younger orthogneisses (Pog).
The above units are interpreted as older assemblages that have been intruded by Mesozoic plugs and stocks of granodiorite (EJgd) and Cretaceous granite/granodiorite (Kg/Kgd) thought to be related to the gold mineralization. All lithologies are unconformably overlain by massive andesite flows and breccias of the Late Cretaceous Carmacks Group (uVk) with local areas of early Early Cretaceous coarse clastic sedimentary rocks (IKcg) at the base of the sequence (Pautler 2010). All above lithologies are intruded by Cenozoic quartz/quartz-feldspar porphyries (Er).

Large NW-SE regional-scale faults are present trending parallel to regional geology and direction of the Tintina belt. Discontinuous lenses of ultramafic rocks with both volcanic and intrusive components occur along a northwest trend and marks the contact between the Klondike Schist (PKs) and older Potassium Feldspar Augen Orthogneisses (DMoga).

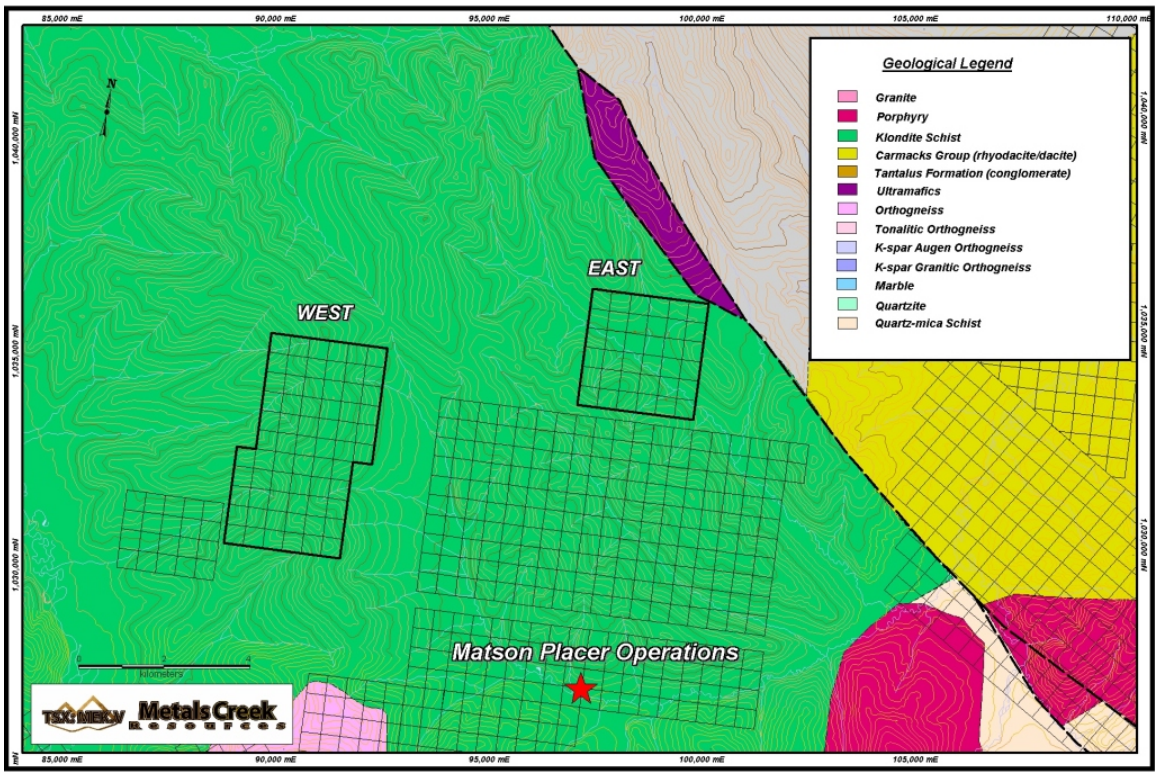
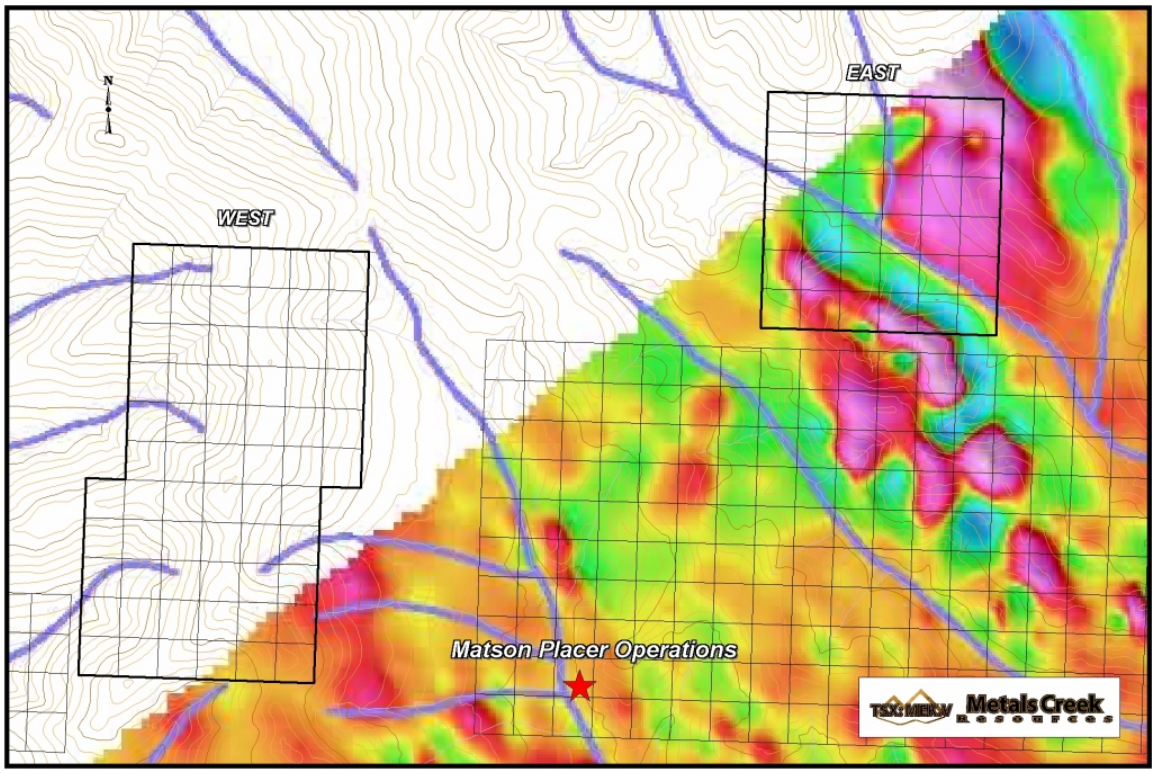
4.0 PROPERTY GEOLOGY

Both claim blocks are interpreted to be underlain by the Klondike Schist.

Squid West - Rocks encountered on Squid West are pale schists composed mainly of muscovite, sericite and chlorite. These schists are south dipping at approx 20 degrees with numerous thin bull white quartz veins ranging from 5-15cm in width. Strong weathering on surface has left evidence of dissolved pyrite grains that once existed. Areas of more massive quartz-bearing material (possible quartzite) have been located in the northern half of the block.

Squid East – The recent soil sampling/prospecting carried out in 2012 on Squid East, located limited outcrop and float consisting of dark biotite schists, pale quartzite/sericite schist and well carbonate altered porphyry? South of Borden Creek at the base of the steep hill lie east-west striking biotite schists with ribboned quartz stringers and thin veinlets carrying trace to minor pyrite. Pale quartzite/sericite schist was located and sampled in sub-crop in the south east quadrant of the block. The northern portion of the property hosts abundant angular float/sub-crop of potassium feldspar-rich and weakly foliated looking porphyritic material with strong carbonate alteration and localized brecciation. Occasional semi-transparent to white quartz boulders with trace carbonate are present also. Of particular interest on Squid East is a northwest striking magnetic low which cuts through the property and is coincident with Au (plus Ag, Sb, Hg, Pb) -in-soil anomalies located in the southeast corner of the claim group. The source of the magnetic low is not known at this time.





5.0 2012 FIELD PROGRAM

In August of 2012 a program of soil sampling and limited prospecting was undertaken to focus on better delineating Au-in-soil anomalies that were discovered by ridge and spur soil sampling in 2011 by Metals Creek Resources on the Squid Property. Five anomalous areas (B through F) were the focus of the 2012 program. The field work commenced Aug 8th ending Aug 17th using four men; in two, two-man crews. The property was accessed via helicopter from Dawson City on a daily basis.

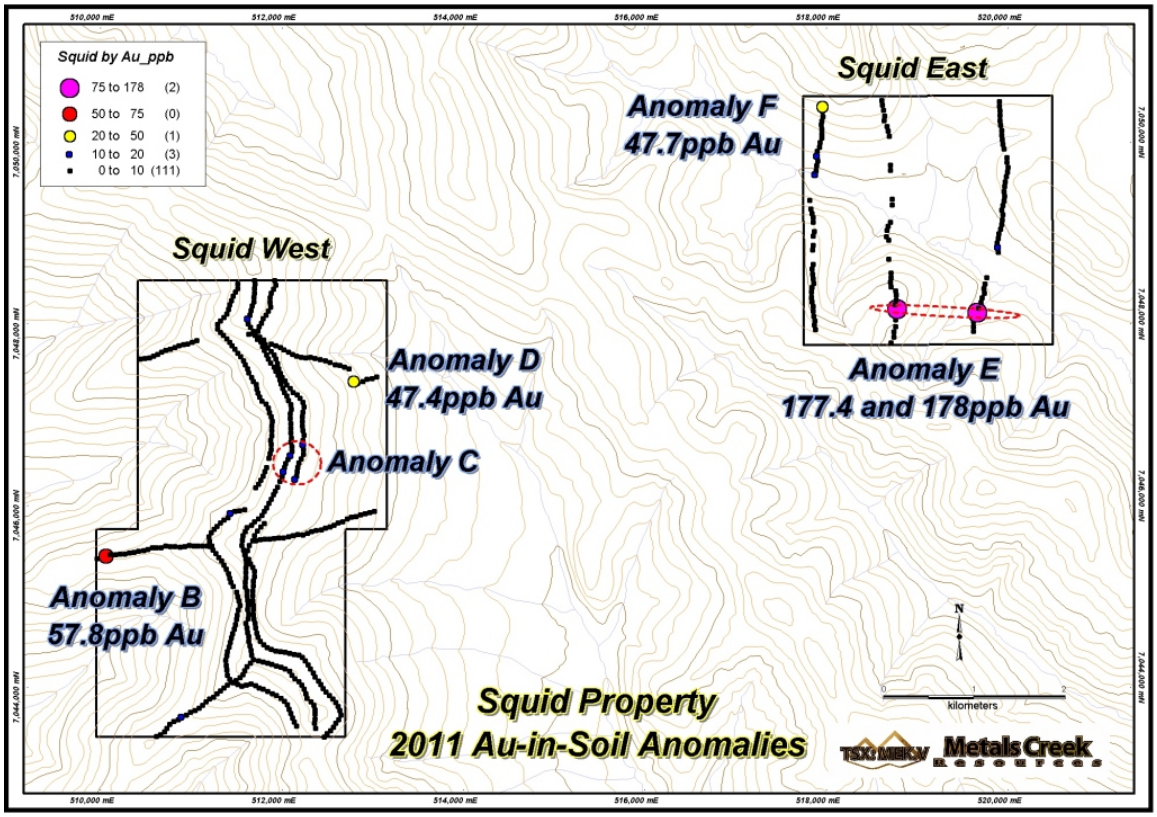


Table 2: Field crews

5.1 Analytical Procedures

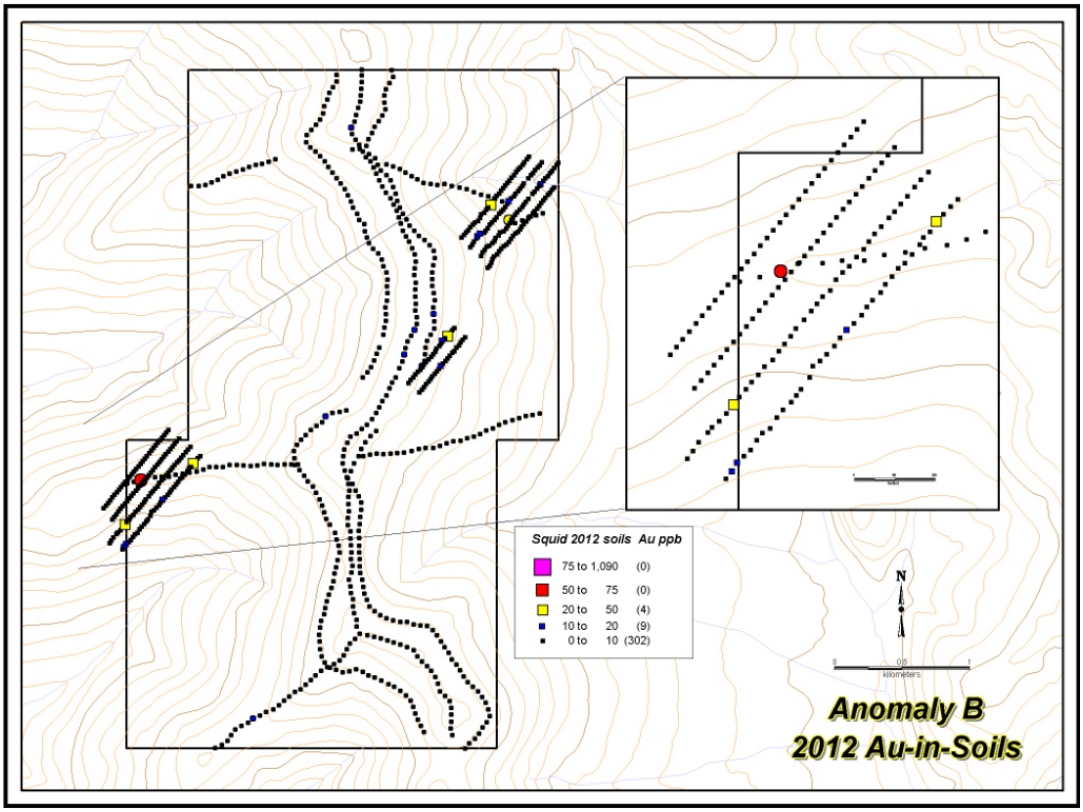
MEK personal bagged the soil, silt and rock samples into large fiber bags and delivered the samples to the ACME Prep Lab in Dawson City. From there, the samples were shipped to ACME Analytical Laboratory located in Whitehorse, YK for drying and sieving before being shipped to ACME Analytical Laboratory in Vancouver for analysis. The silts and soils were dried at 60C, sieved to -80 mesh and analyzed using ICP-MS. Rock samples were crushed; split then pulverized to 200 mesh and analyzed using a Fire assay fusion by ICP-ES.

5.2 Soil Sampling Procedures

Soil sampling took place at 25m stations on recce-lines that were planned 100m apart and generally 1km in length. The soils were collected using a one-piece 'Edelman type' soil auger and packaged individually in craft soil bags. An attempt was made to reach as deep as possible beneath the organic humus horizon to sample the coarser C-horizon. Each sample was described on a check list in the field noting depth, colour and quality of the soil sampled. Also each location was GPS'd (Garmin GPSmap 76CSx) and flagged in the field for plotting accuracy and future reference if needed.

5.3 Soil Sampling Results

During six days in the field, a total of 988 soils were collected to increase sample density in an attempt to define five Au-in-soil anomalies that were generated in 2011 labeled B through F as in the YMIP application report.

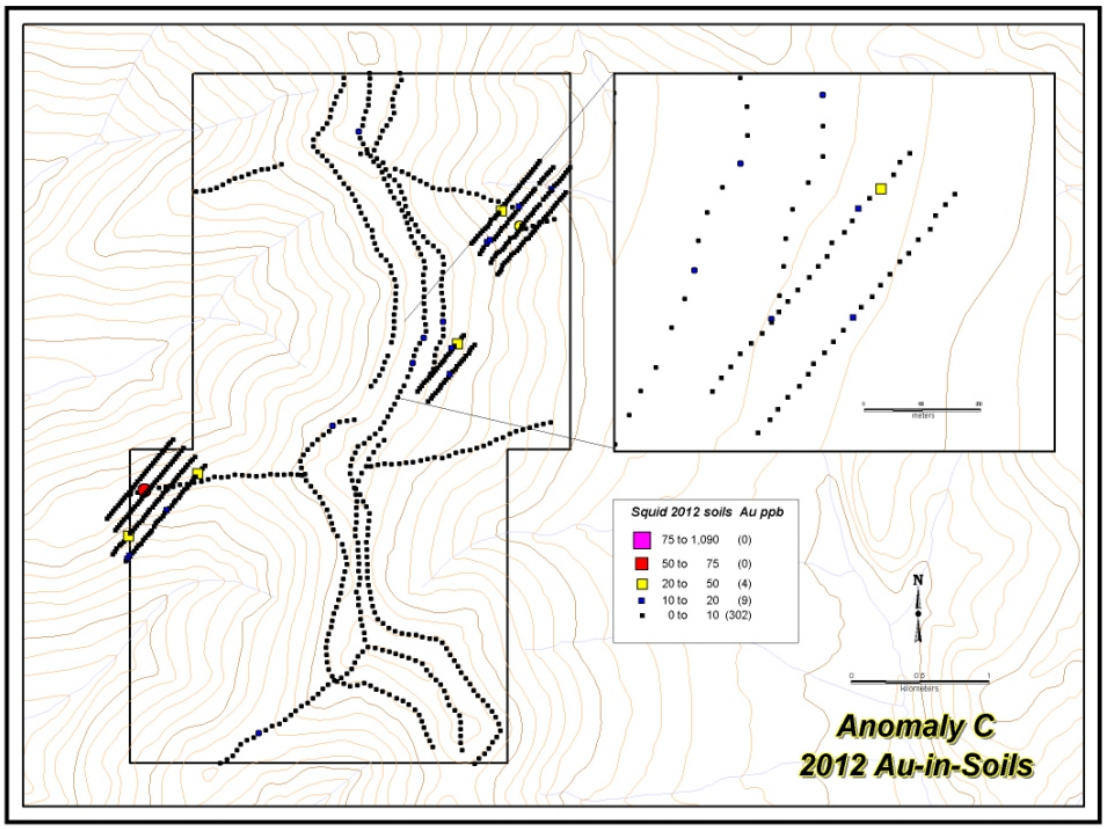


Anomaly B (Squid West)

The original anomaly consisted of a single value of 57.8ppb located on a spur top in the west side of the Squid West block. Four new soil lines spaced 100m apart were completed. A total of 138 soils were collected and resulted in five single sample anomalies up to 46.1 ppb Au. The samples are fairly sporadic in nature, but a possible north-south gold trend may be evident along the western claim boundary. Anomalous base metal values show a north-south trend which may be correlative with the gold values however the strength of the anomalies are moderate at best.

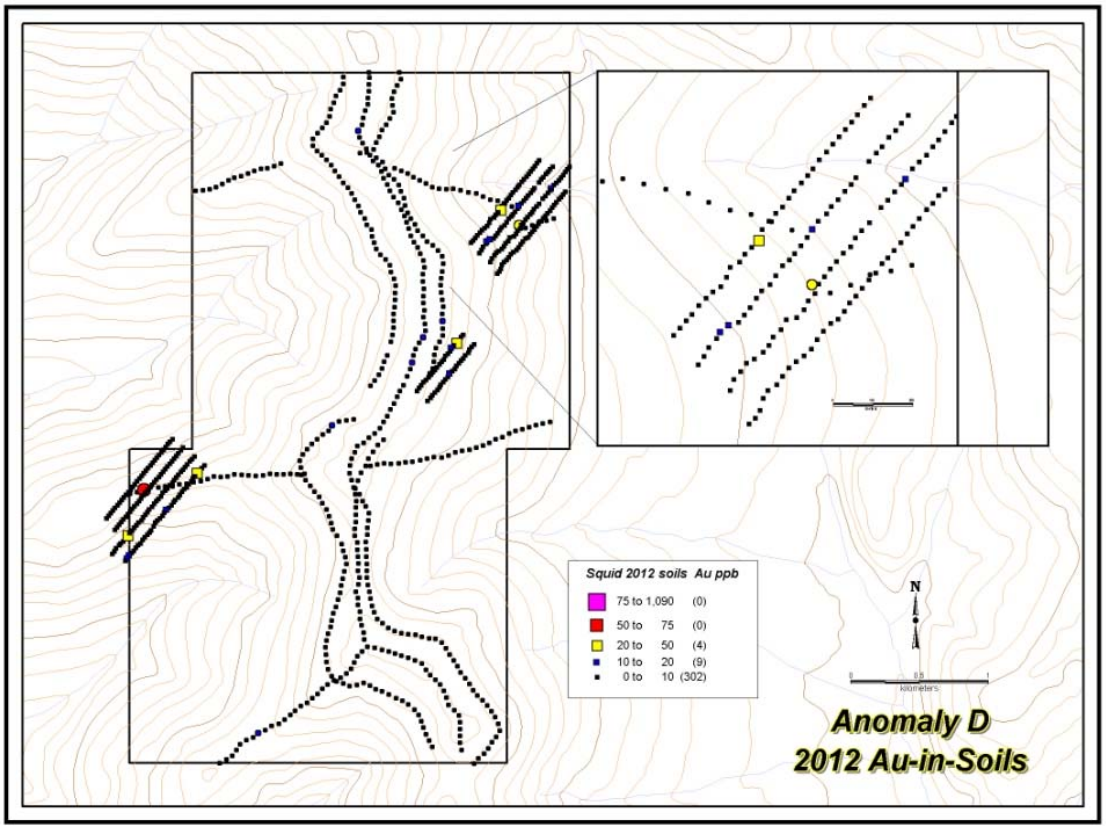
Anomaly C (Squid West)

Originally, a weak cluster of Au-in-soil values up to 14.9ppb located near the ridge top in the center of the Squid West block. Two short 500m lines, 100m apart were completed however the results were inconclusive.



Anomaly D (Squid West)

Anomaly D lies approx 700m northeast of anomalous area C. This original soil anomaly is a single 47.4ppb Au with an adjacent soil of 6.5ppb Au in the downhill direction from 2011. Four lines (133 soils) were sampled in 2012 in an attempt to better define the gold anomaly. Results from the detailed sampling included a few sporadic values of greater than 10 ppb (high 20.5ppb) but no real pattern.



Anomaly E (Squid East)

Located on the southern half of the Squid East block; the original target consisted of two highly anomalous soil samples. These samples (177.8ppb Au and 178ppb) sit approximately 900m apart in an east west orientation. The 2012 soil lines were oriented in a north-south direction; 100m apart to best try and define the anomaly. A total of 673 soils were collected at 25m intervals. Four anomalous areas have been identified labeled E1 through E5 for the purpose of this report.

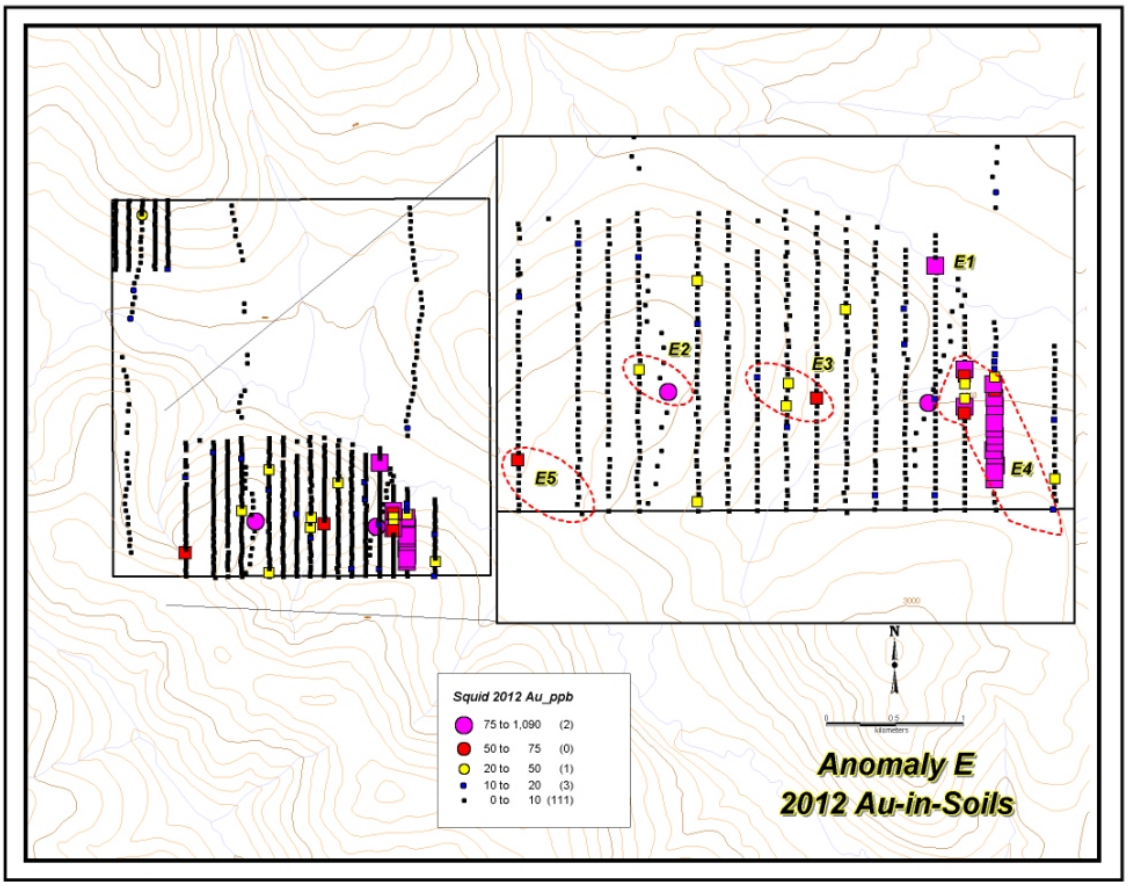
E1 is a single Au-in-soil anomaly near Borden Creek in an area of permafrost and poor quality soils. This sample of 86ppb Au may represent a window in the permafrost, illustrating a gold-bearing structure below.

E2 consists of two anomalous samples that may or may not be connected to E3 and E4. Gold values were 34.6ppb and 177.4ppb Au and occur on the western flank of a possible east-west striking auriferous zone.

E3 is a small cluster of anomalous soils approx 300m east of E2 and 400m west of E4, with Au-in-soils up to 60.1ppb. This anomaly is approx 200m in length ranging from 16.3ppb to 60.1ppb Au. Although, no pathfinder elements are found associated with the anomalous Au samples its location along the southern edge of a magnetic low makes for an attractive target.

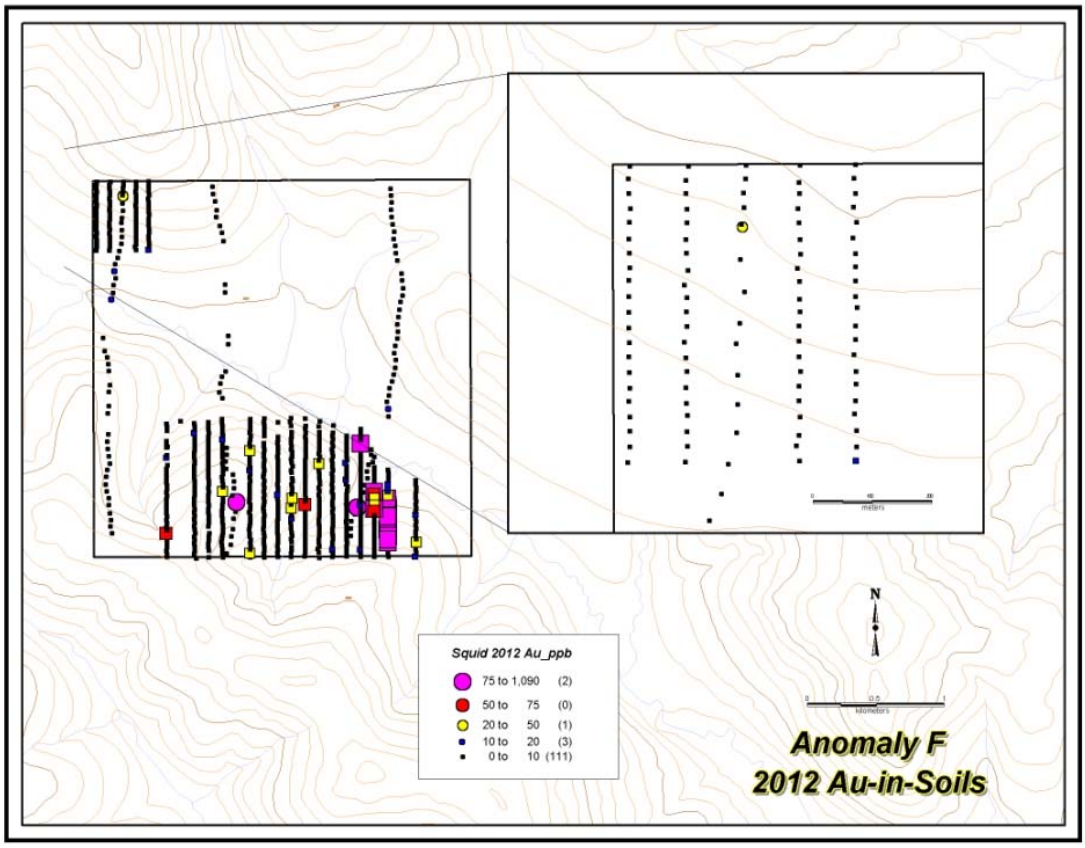
E4 is a large, continuous and distinct anomaly located on the southeast corner of the Squid East block with a coincident magnetic low. The exact dimension and orientation of the anomaly is unknown at the time of this report but appears to be approximately 200m wide and 425m long in a northwest-southeast fashion; parallel to the magnetic low. Gold values range from 15.6ppb to a high of 1,086.5ppb (1.086g/t Au). Additionally, the gold anomaly has significant pathfinder elements associated with it, including silver (Ag), arsenic (As), antimony (Sb), barium (Ba) and mercury (Hg). Comparisons can be made between this anomaly and that of Kinross's Golden Saddle, Kaminak's Coffee, Ethos's Betty and Comstock's QV project, all of which have a similar suite of highly anomalous elements.

E5 is a single Au-in-soil anomaly of 57.8ppb Au located on the southwest corner of the Squid East block with a clustering of anomalous arsenic (up to 194.4 ppm) and Barium (2,062 ppm) associated with it. The strong clustering of arsenic and barium suggest a southeast orientation to the anomaly that is very similar to the E4 signature.



Anomaly F (Squid East)

This anomalous soil of 47.7ppb Au lies in the northwest corner of the Squid East claim block that was discovered in 2011 on a widely spaced (50m) recce line. Two north-south soil lines were conducted on either side of the anomaly for a total of four lines and 89 soils. In addition to the four soil lines, a few soils were collected north of the anomalous soil to complete the original traverse. Results were negative



5.4 Silt Sampling Results

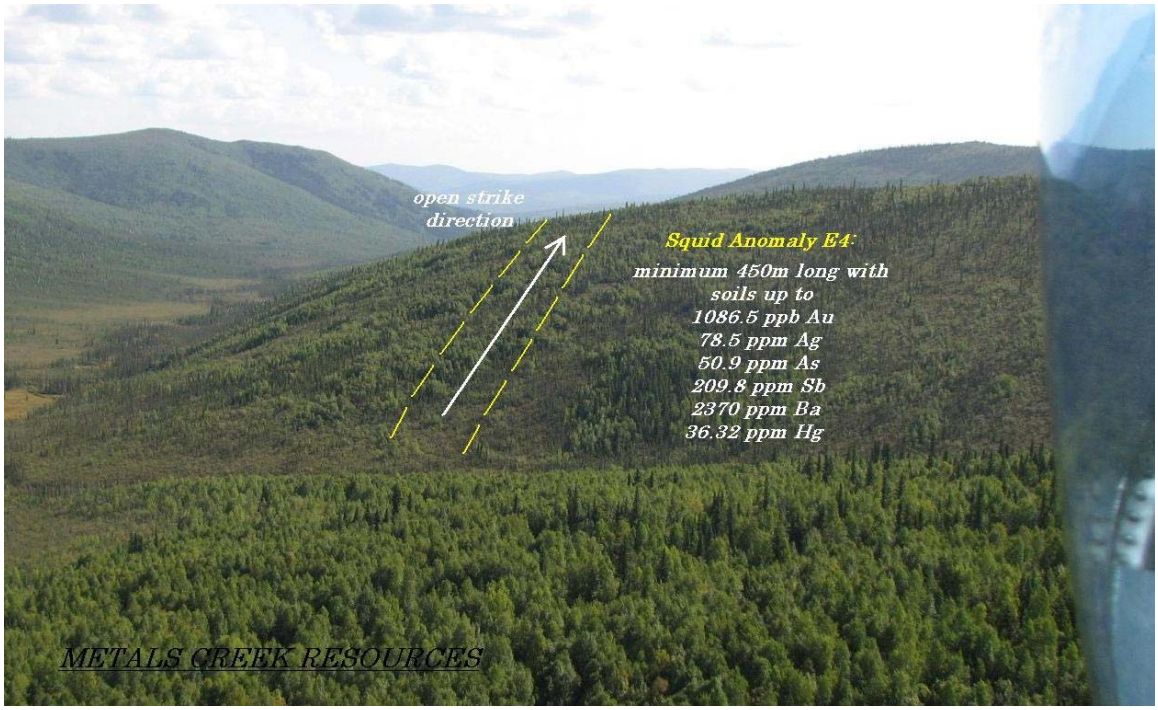
A total of five silts were collected from a small tributary feeding Borden Creek as well as Borden Creek itself in the southeast quadrant of the Squid East block. The silt qualities were poor to moderate with an abundance of fine organics as a result of heavy rains and snow. The Au-in-silts range from 1.2ppb to 4.7ppb. The silt grades appear to increase from the top of the tributary downhill towards Borden Creek where the two samples >4ppb are located.

5.5 Rock Sampling Results

Twenty-five rock samples were collected; twenty-two from Squid East and three from Squid West. No anomalous values were achieved. The values range between <0.005 and 0.008ppb. Sample locations, descriptions and values are listed in Appendix III.

5.6 QAQC

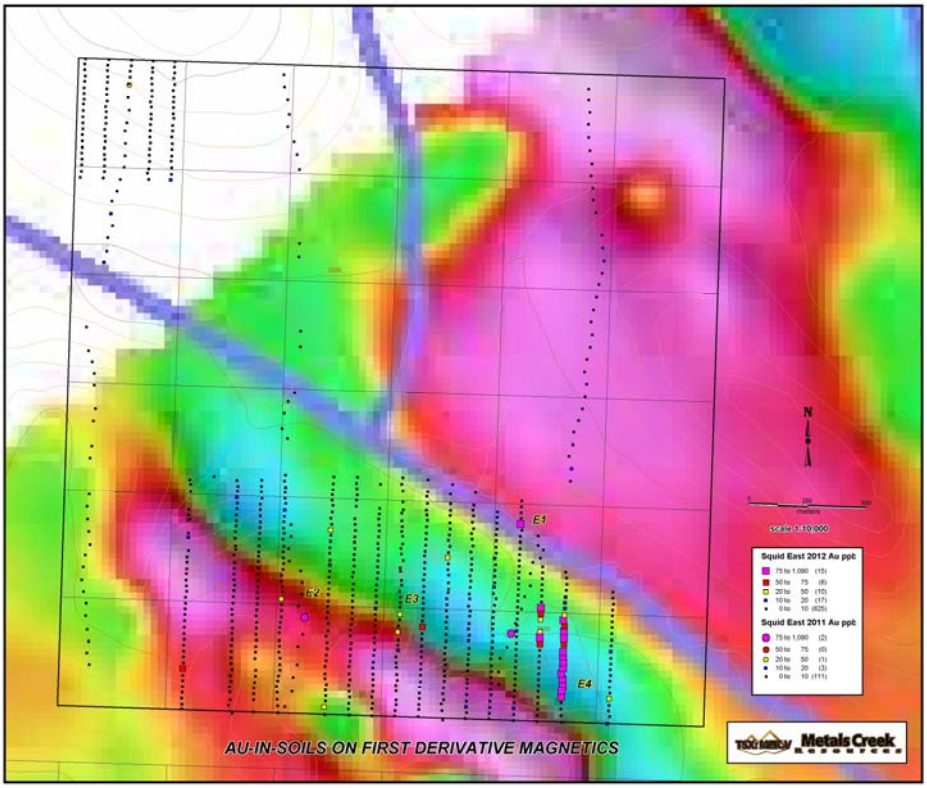
As part of MEK's quality assurance program, and to verify that anomaly E4 is in fact as significant as the original assays suggest, 21 anomalous multi-element soils were re-assayed. The results show that indeed the multi-element anomaly exists and that the original assays are very reliable. In fact, results show that the original Au assays average 9% lower than the re-assays. The difference between original and re-assays of the important pathfinders (Ag, As, Sb, Ba and Hg) are generally quite close and generally average within 5% of each other. A results summary is attached in Appendix VII.



6.0 CONCLUSIONS

The 2012 program included the collection of 988 soils, 5 silts and 25 rock samples over six days. These samples were taken on five separate gold targets (B,C,D,E and F) which had been outlined from the results of a recce soil survey carried out in 2011. The results from the sampling on four of the target grids were inconclusive at best however the results from sampling on Anomaly E were quite impressive. The recent soil results on this target has identified five areas of potential significance labeled E1 through E5, with E4 being the highest priority. Anomaly E4 is outlined by a cluster of over 26 anomalous soil samples and anomalies E1, E2, E3 and E5 are outlined by 1 to 4 sample sites of anomalous gold.

Anomaly E4 is a strong multi-element (Au, Ag, As, Sb, Ba, Hg) cluster of values associated with a discrete magnetic low. The exact dimension and orientation of the anomaly is unknown at the time of this report but appears to be approximately 200m wide and 425m long in a northwest-southeast fashion; coincident with and parallel to the magnetic low. It should be emphasized that this is a minimum size as the anomaly appears to be still open and the existence of patchy permafrost and cover material (loess and/or black muck) may cause some soil samples to be ineffective in mapping underlying mineralized bedrock Gold values range from 15.6ppb to a high of 1,086.5ppb (1.086g/t Au). Additionally the gold anomaly has significant pathfinder element association including silver (up to 78.5 ppm), arsenic (up to 50.9 ppm), antimony (up to 209.8 ppm), barium (up to 2370 ppm), and mercury (up to 36.32 ppm). Comparisons can be made between this anomaly and the soil anomies associated with the gold mineralization at Kinross's Golden Saddle, Kaminak's Coffee, Ethos's Betty and Comstock's QV project.



7.0 RECOMMENDATIONS

Follow-up of the gold targets identified on the Anomaly E grid is a high priority with emphasis on the E4 soil anomaly. Additional work should include:

- Ground acquisition should be carried out along the magnetic low trend and additional targets should be evaluated within a 10 km radius. Open ground proximal to the anomaly should be staked immediately.

- Detailed soils should be done on the one fill-in line and on newly acquired ground with a strong focus on extending the E4 anomaly and the magnetic low.

- Mechanical trenching should be carried out over anomalies E2, E3, E4 and E5 to expose the underlying geology and potential Au-bearing structures. Trench orientation is still to be decided however initial work should be oriented in a northeast direction across the anomalies.

- Geological sampling/mapping/prospecting should be carried out after the trenching to get a better handle on the gold mineralization and structural/geological controls.

- Assuming positive results diamond drilling will be proposed to test the extent of the mineralization.

- Detailed airborne magnetics will also be proposed to complete the magnetic mapping in the region. Induced polarization may be an option in helping to define the mineralization however the style of mineralization will need to be ascertained prior to recommending this

- Additional work on the other targets will depend on results from the priority E4 target.

8.0 EXPENDITURES

Total expenditures incurred on the Squid Property 2012 fieldwork program.
(Not capped expenditures claimed for YMIP-funding)

Helicopter	$ 37,324.00
Truck Rental	$ 2,029.22
Assays (soils, silts and rock)	$ 17,650.71
Hotel & Food	$ 6,260.38
Labour (4-5 persons over 10 days)	$ 19,450.00
Supplies (safety, field and gas)	$ 1,238.81
Flights	$ 10,164.89
TOTAL	**$ 94,118.01**

Total expenditures capped for YMIP-funding re-imbursement:

Helicopter (Travel capped at 25% of total exp)	$ 13,250.24
Assays (soils, silts and rock)	$ 17,650.71
Daily Field Expenses ($100/person/day)	$ 4,400.00
Labour (4-5 persons over 10 days)	$ 17,700.00
Report Writing/Maps (capped at 10%)	$ 5,300.00
TOTAL	**$ 58,300.95**

9.0 STATEMENT OF QUALIFICATIONS

I, Don Heerema Jr., hereby certify that:

1. I am a practicing geologist in Thunder Bay, Ontario and reside at 26 Burriss St., Thunder Bay, Ontario, P7A 3C9.
2. I am a graduate of Lakehead University with a HBSc. (2002) in Geology.
3. I am a Canadian Citizen.
4. I have practiced my profession continually since graduation in 2002.
5. I am a practicing member of the Association of Professional Geoscientists of Ontario. (Registration #1528)
6. I do not have, nor do I expect to receive, directly or indirectly, any interest in the properties of Metals Creek Resources.

			4.5			**4.9**			**6.5**			**4.0**

Therefore original Au, As and Sb assays were lower on average than the re-assays
All other pathfinders were higher on average in the original assays

CERTIFICATE OF ANALYSIS DAW12000232.1

CLIENT JOB INFORMATION

Project: SQUID EAST
Shipment ID:
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	300	Dry at 60C			DAW
SS80	300	Dry at 60C sieve 100g to -80 mesh			DAW
1DX1	300	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Metals Creek Resources

CERTIFICATE OF ANALYSIS DAW12000233.1

CLIENT JOB INFORMATION

Project: SQUID EAST
Shipment ID:
P.O. Number
Number of Samples: 245

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	244	Dry at 60C			DAW
SS80	244	Dry at 60C sieve 100g to -80 mesh			DAW
1DX1	244	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Metals Creek Resources

CERTIFICATE OF ANALYSIS DAW12000245.1

CLIENT JOB INFORMATION

Project: SQUID
Shipment ID:
P.O. Number
Number of Samples: 307

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Method Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	306	Dry at 60C			DAW
SS80	306	Dry at 60C sieve 100g to -80 mesh			DAW
1DX1	306	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN

ADDITIONAL COMMENTS

Invoice To: Metals Creek Resources

DECLARATION OF INSURANCE

Public Liability and Property Damage	Renter		DF	X
Physical Damage including comprehensive	Renter		DF	X

IMPORTANT MESSAGES

Purchasing Loss Damage Waiver (LDW)

By signing below, the renter accepts LDW at the rate per day or part thereof as recorded in the section entitled "Loss Damage Waiver Fees". By the renter accepting LDW, the renter is responsible to pay the amount of the deductible listed below PER OCCURENCE and DF agrees to waive the renter's financial responsibility for damage to the vehicle. However, if the renter has violated any of the terms and conditions of this rental agreement, the renter is responsible for all loss or damage to the vehicle and/or loss or damage to DF.

Renters Signature:

X

Loss Deductible $5,000.00
Initial

Declining Loss Damage Waiver (LDW)

By signing below, the renter is declining LDW and agrees to pay DF for all loss or damage to the vehicle, HOWEVER INCURRED, (regardless of fault)

Renters Signature:

X **PURCHASED**

I am authorized as the Renter, or by the person named as the Renter, to enter into this contract, and I acknowledge that I have read and understood and agree to be bound by the Terms and Conditions set forth on the front and back of this Agreement.

Renter authorizes DF to use unsigned credit voucher(s) to process payments (as defined in Section 7 on the reverse of this form) against the credit card provided at the time of rental.

Fare Change & Cancellation Policies
* Changes or cancellations may be made up to two hours prior to departure time.
* Changes are subject to any difference in fare and may be subject to applicable change fees and taxes.
* Cancellations may be subject to a fee, depending on the fare being cancelled. All monies paid to Air North, Yukon 's Airline in the form of fares, fees, taxes,
and surcharges are non-refundable, but may be credited to an Air North credit file.
* Air North credit files expire one year from the date of purchase. Credits are fully transferable. Credits may not be available for use on select Air North Packages or Air Pass (es);
for example, Canada 's Arctic Circle Air Pass.
* Promotional fares may have additional fare rules specified at time of booking; for example, Air North Packages and Gateway Getaways.
* Failure to show for a flight may result in 100% forfeit of fare and all fees, surcharges and taxes,
