## 1 Introduction

Stakeholder Gold Corp. (“Stakeholder”) commissioned Ground Truth Exploration Inc. (“Ground Truth”) of Dawson City, Yukon on their Ballarat Property (the “Property”). The Property is in Yukon’s White Gold District, approximately 115 km south of Dawson City, YT, and adjacent to the southern border of Kinross Gold’s White Gold Property; Dawson Mining District on NTS Map Sheets 115J/14 & 15 and 115O/02 & 03 (Figure 1). The approximate center of the property is Latitude: 63° 00’ N Longitude: -139° 01’ 50” W

A comprehensive exploration program on the Property was conducted over 3 Phases in 2016 including the collection of 1723 grid and reconnaissance soils; 425 GT Probe samples over 5 lines on the NW Zone; 11.76 line-km of high-resolution DC IP-Resistivity surveys over 28 lines on the NW and East Zones; a 38.75 sq. km of aerial photographic survey of the property; geologic mapping and prospecting; staking of an additional 146 quartz claims; and 1728.15m of RAB Drilling over 18 holes on the East Zone. The purpose of the initial, Phase 1, work was to follow up on known gold in soil anomalies on the NW Zone target area and on a series of anomalous gold in soil samples along a historic reconnaissance line on the East Zone, with a goal of better refining targets for follow up RAB drilling at a later point in the season. Phase 2 work followed up on a significant gold in soil anomaly outlined on the East Zone target during Phase 1 with infill grid soil sampling, additional geologic mapping/prospecting, and DC IP-Resistivity surveys. Additional reconnaissance soil lines and the staking of an additional 146 claims along the southern boundary of the property was conducted during Phase 2 as well. Phase 3 consisted of 1728.15m of RAB drilling over 18 holes on the East Zone target. Additional drilling was planned on the NW Zone, however, could not be conducted in 2016 due to seasonal constraints (daylight, weather, etc.).

While the results and interpretation of all 2016 exploration activities on the Property will be discussed herein, it should be noted that the Phase 1 work program was funded, in part, by the associated YMEP granted, and that the Phase 2 and 3 work programs were conducted based on the results of the Phase 1 program.

## 2 Property Description

The Property is located in the central-western part of Yukon, approximately 115 km south of Dawson City, YT, and adjacent to the southern border of Kinross Gold’s White Gold Property; Dawson Mining District on NTS Map Sheets 115J/14 & 15 and 115O/02 & 03 (Figure 1).

The property is located in an unglaciated region of the Dawson Range. Elevations range from 580m to 1310m. Vegetation is typical of the Boreal forest, with mixed white and black spruce forests in valley bottoms, stunted black spruce and moss matt forests underlain by permafrost on north facing slopes and as elevation increases, transitioning into moss, talus and felsenmeer with increasing elevation. Tors are common on ridgetops in the area. The typical climate of the area is moderate precipitation, warm summers, and cold winters.

Access to the Property is predominately by helicopter from Dawson City, YT, or using fixed wing to the adjacent airstrips on Kirkman (8 km west) and Ballarat (6 km south) Creeks, and along a network of existing roads that cross the western boundary of the Property. Barge landings are also located at the confluence of Kirkman and Thistle Creeks along the Yukon River and can be utilized to mobilize heavier equipment or vehicles not suitable for helicopter or fixed wing transport.

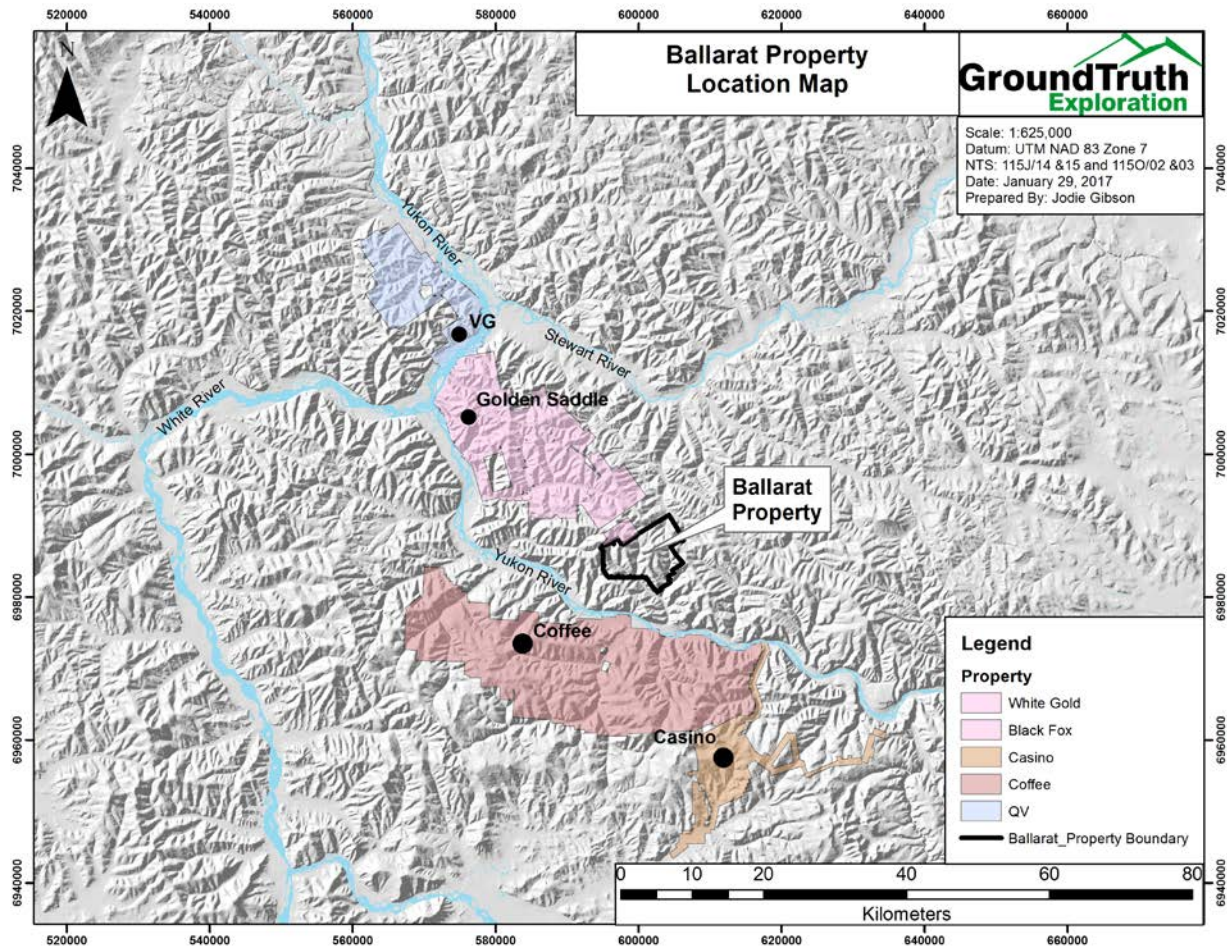

Figure 1: Location Map

### 3 Claim Information

The Ballarat Project is registered in the Dawson Mining district on NTS Map Sheets 115J/14 & 15 and 115O/02 & 03 115J/10 (figure 2, Appendix A). During the Phase 1 work the property consisted of 200 Quartz Claims, however, an additional 146 quartz claims were staked along the southern boundary of the property during follow-up Phase 2 work and the property now consists of 346 Quartz Claims covering approximately 6900 hectares.

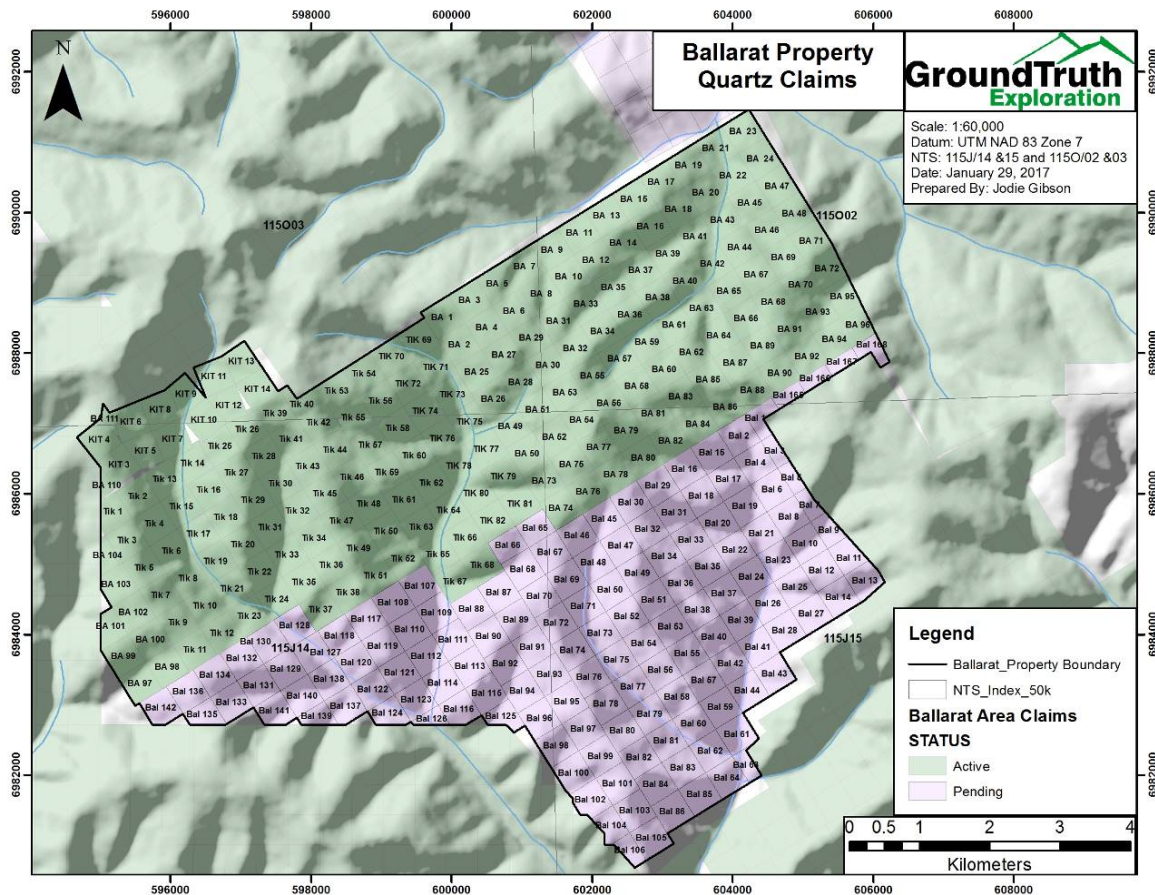

Figure 2: Claim Map

## 4 History

The Ballarat Property covers the southeastern slopes of Thistle Mountain. Historical cumulative placer gold production from creeks draining Thistle Mountain is reported to be 104,604 ounces in the period 1913 to 2006 (Compiled from Yukon Placer Mining Industry volumes published by Indian and Northern Affairs Canada). Quartz or hard rock prospecting in the Thistle Mountain area dates back to the Klondike Gold Rush and has continued sporadically since then. Most of this work appears to have concentrated on the Black Fox showing described as a 0.9m quartz vein with pockets of galena, chalcopryite and pyrite.

Before Stakeholder acquired the Property only limited exploration work had been documented within the area of the present Property as shown below:

092982 Sparkling Minerals Inc. 1991 Soil Geochem. 092982.pdf

093999 F. Andersen 1999 Soil Geochem. 093999.pdf

094423 F. Andersen 2003 Geophysics 094423.pdf

In 2009, Stakeholder acquired an option on the Property, flew a 360 line kilometer high resolution magnetic and radiometric airborne survey on flight lines spaced 100m apart over what is now the western half of the Property and completed a 1478-sample "B"-horizon soil geochemical survey over the northwest third of the claim block at 50m sample intervals along north-south GPS traverse lines spaced 100m apart (Fekete, 2010). The soil survey outlined two parallel, northeast-trending, linear gold anomalies, roughly 1km long and approximately 200 m apart (the "Corner" area).

In 2010 Hinterland concentrated on the two Corner area gold trends identified in 2009 and completed 30km of line cutting, 961 deep auger-type soil samples, 750 m of mechanical trenching and expanded the Property to 200 claims by staking (Fekete, 2010). The deep auger-type results defined two very strong gold-in-soil anomalies trending east-west for a minimum distance of 1000 m on the property. The southern anomaly was the best defined with maximum values up to 796 ppb Au. The northern anomaly showed numerous high values, up to 188ppb Au. The 2009 results returned maximum values of only 68 ppb from an average sample depth of 30cm. In contrast the 2010 samples were taken from an average depth of 60cm and, based on the enhanced results, appear to have sampled the deeper, less weathered, less oxidized, more representative C-horizon of the soil profile. Four trenches were dug with an excavator at 50 m intervals along a strike length of 160m. A mineralized structure was exposed at the north end of the area marked by quartz-carbonate veins, breccias and massive stibnite (antimony) mineralization. Several rock samples returned antimony values above the upper detection limit of 2000 ppm Sb but no significant gold values were obtained. The structure exposed by the trenching is not the source of the gold-in-soil anomalies. The only notable gold result of the trenching was 1.3 gpt Au from a 1.0 m wide quartz vein exposed at the south end of the second trench.

In 2011, an 820-sample reconnaissance ridge and spur, deep auger-type soil geochemical survey was done over the central and eastern parts of the Property to identify other possible areas for detailed work other than the Corner area (Fekete and Dubois, 2012). The best results were found on a single traverse line found at the headwaters of the creek draining the eastern part of the Property where strong to moderate gold-in-soil values up to a maximum of 164 ppb Au were returned over a continuous distance of 300 m.

In 2012 a total of 753 m of drilling was done in five holes to test the two gold-in-soil anomalies in the northwest Corner area (Fekete and MacPhail, 2012). The drilling encountered primarily quartz biotite gneiss and gneiss derived from a granite protolith. A number of narrow quartz veins and quartz stockwork zones were also noted but the two gold-in-soil anomalies in the Corner area remain unexplained. Significant intersections are as follows:

**Table 2: Summary of significant historic drill results from the NW Zone.**

Hole ID	From(m)	Length(m)	Wt. Avg. Au (g/t)
BA12-01	55.6	3.0	0.945
BA12-01	117.8	2.2	0.720
BA12-03	44.9	1.0	1.708

## 5 Geology

### 5.1 Regional Geology

The regional geology of the area is primarily summarized from Gordey et al. (2006).

The Ballarat Project occurs within the unglaciated Yukon Plateau portion of the Paleozoic Yukon-Tanana Terrane, southwest of the Tintina Fault. At a regional scale the area is dominated by Devonian to Mississippian metasiliciclastic rocks, which interfinger with, and are stratigraphically overlain by, intermediate to mafic amphibolite. The metasiliciclastic rocks include metamorphosed fine clastic rocks, quartzite and conglomerate. The above lithologies include marble horizons and are metamorphosed to amphibolite grade. Devonian to Mississippian metasedimentary rocks (quartzite and metapelite) of the Nasina Assemblage lie structurally above and/or may partly be equivalent to the above metaclastic unit.

Abundant orthogneiss bodies of Devonian to Mississippian and Permian ages, with compositions ranging from granite to K-spar augen bearing, to tonalite and diorite, occur within Yukon-Tanana Terrane. Narrow bodies of Paleozoic ultramafic rocks, commonly serpentinized, also occur within the area.

The above units are interpreted to represent two arcs, an older Devonian to Mississippian arc consisting of amphibolite and associated subvolcanic intrusions built on a siliciclastic basement, and a Permian arc of granitic orthogneiss and coeval metavolcanic rocks built on the Devonian-Mississippian arc.

The above lithologies are intruded by small plugs and stocks of Cretaceous aged quartz monzonite and granodiorite and Jurassic aged granodiorite to quartz monzonite, and are unconformably overlain by massive andesite flows and breccias of the Late Cretaceous Carmacks Group, locally with Early Cretaceous coarse clastic sedimentary rocks at the base of the sequence. Eocene feldspar ± quartz porphyry dykes intrude the above.

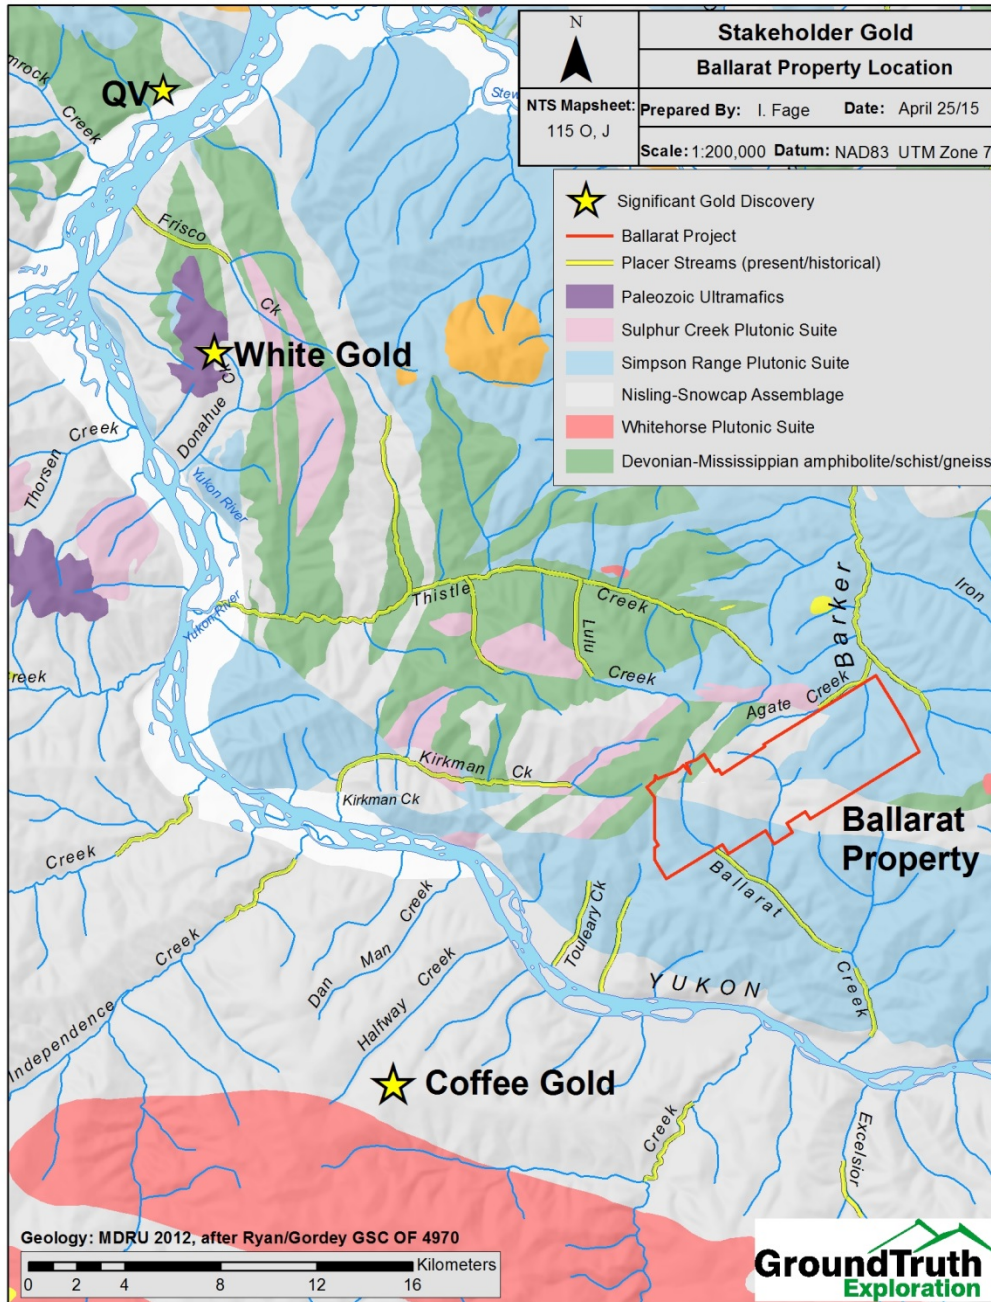

Figure 3: Regional Geology with known placer bearing creeks (yellow).

## 5.2 Property Geology

Based on the available geochemical and geophysical data and geologic mapping performed to date the Ballarat property appears to cover 3 geologic domains (north,

central, south) controlled by two, W-NW oriented, regional scale, sinistral faults that cut the property.

- 1.) North Domain: Occurs on the north side of the Thistle Creek Fault and consists of NW striking package of felsic-augen orthogneiss, intermediate-mafic gneiss, & amphibolite.
- 2.) Central Domain: Occurs between the Thistle Creek Fault and a previously unnamed fault that is interpreted to run along Kirkman and the central portion of Ballarat Creek ("Ballarat Fault"), and covers a majority of the property. It consists of NE trending "belts" of felsic-intermediate gneiss and amphibolite with quartz-mica schist and gneiss along the NW margin of the property and onto Kinross' Black Fox claims. With the exception of the units located along the northwestern boundary, units dip moderate to steeply SE, and appear to be tightly, locally isoclinally, folded.
- 3.) South Domain: Occurs south of the Ballarat Fault. This area is unmapped, but appears to consist of a N-NW trending sequence of amphibolite, felsic-augen gneiss, metasediments, and, locally, prophyry based on government geologic maps and interpretation from geophysical data.

Motion along the Thistle Creek and Ballarat faults is undefined, however, offsets and regional geology and geophysical data indicate sinistral movement along the faults, and, based on current regional data are interpreted to have originated during regional extension and exhumation in the mid-late Jurassic (Allan et. al. 2012). There are also indications that the Central Block underwent rotation between the two faults, which may explain the distinct, NE, orientation of units within it. This would also give rise to E-NE trending 2<sup>nd</sup> order, and N-NE trending 3<sup>rd</sup> order splays that are likely associated with mineralization in the NW and East Zone areas. However, the Thistle Creek fault appears to merge with the dextral Big Creek Fault to the SE of Ballarat, indicating the Thistle Creek Fault may have been reactivated, dextrally, during the Cretaceous deformation. Additionally, there are a series of early Cretaceous granitic intrusions along the Big Creek fault associated with "intrusion-related" and porphyry Cu-Mo-Au prospects and showings to the SE of the property; with the closest mapped intrusion, adjacent to the northeastern property boundary and approximately 3km west of the East Zone.

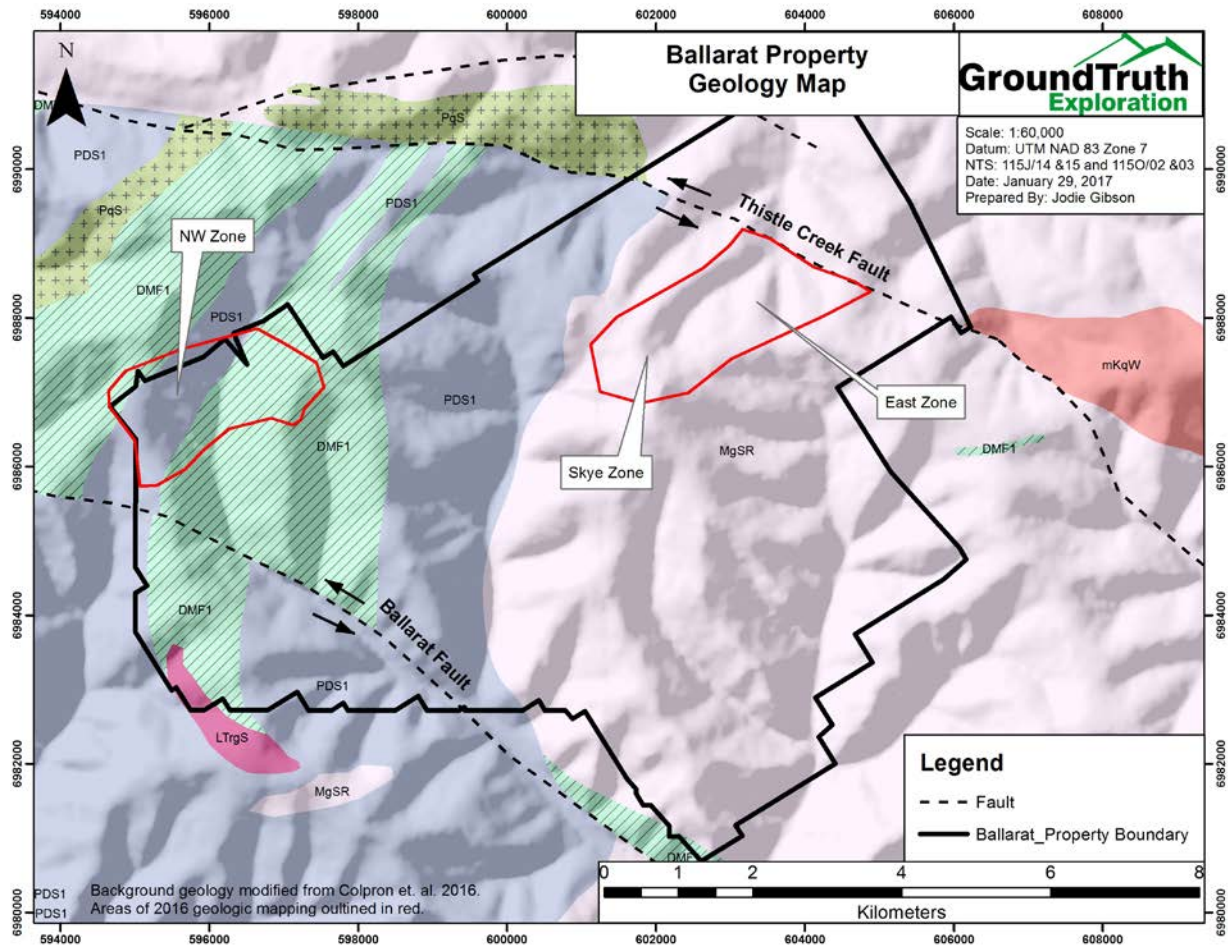

Figure 4: Ballarat Property Geology. Areas of 2016 mapping outlined in red.

Figure 5: Legend for Ballarat Property Geologic Map (Fig. 4).

## 6 2016 Exploration

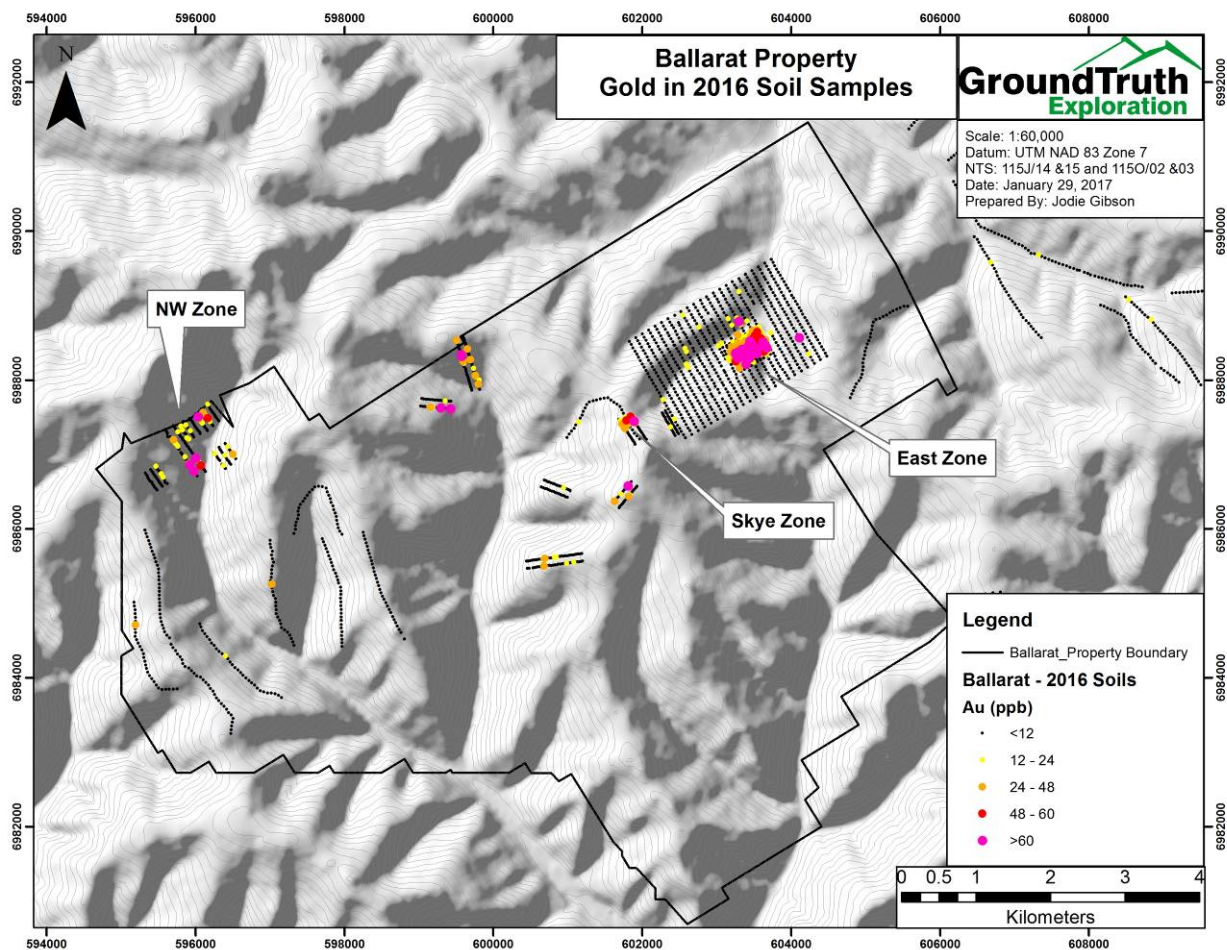

### 6.1 Introduction

A comprehensive exploration program on the Property was conducted over 3 Phases in 2016 including the collection of 1723 grid and reconnaissance soils; 425 GT Probe samples over 5 lines on the NW Zone; 11.76 line-km of high-resolution DC IP-Resistivity surveys over 28 lines on the NW and East Zones; a 38.75 sq. km of aerial photographic survey of the property; geologic mapping and prospecting; staking of an additional 146 quartz claims; and 1728.15m of RAB Drilling over 18 holes on the East Zone. The purpose of the initial, Phase 1, work was to follow up on known gold in soil anomalies on the NW Zone target area and on a series of anomalous gold in soil samples along a historic reconnaissance line on the East Zone, with a goal of better refining targets for follow up RAB

drilling at a later point in the season. Phase 2 work followed up on a significant gold in soil anomaly outlined on the East Zone target during Phase 1 with infill grid soil sampling, additional geologic mapping/prospecting, and DC IP-Resistivity surveys. Additional reconnaissance soil lines and the staking of an additional 146 claims along the southern boundary of the property was also conducted during the Phase 2 program. Phase 3 consisted of 1728.15m of RAB drilling over 18 holes on the East Zone target. Additional drilling was planned on the NW Zone and the newly discovered Skye Zone, however, could not be conducted in 2016 due to seasonal constraints (daylight, weather, etc.).

## 6.2 Soil Sampling

A total of 1723 soils were collected on the Ballarat project in 2016. The samples ranged from infill grid sampling on the NW Zone; grid sampling on the East Zone; and 'ridge & spur' reconnaissance lines over un/under explored sections of the property.

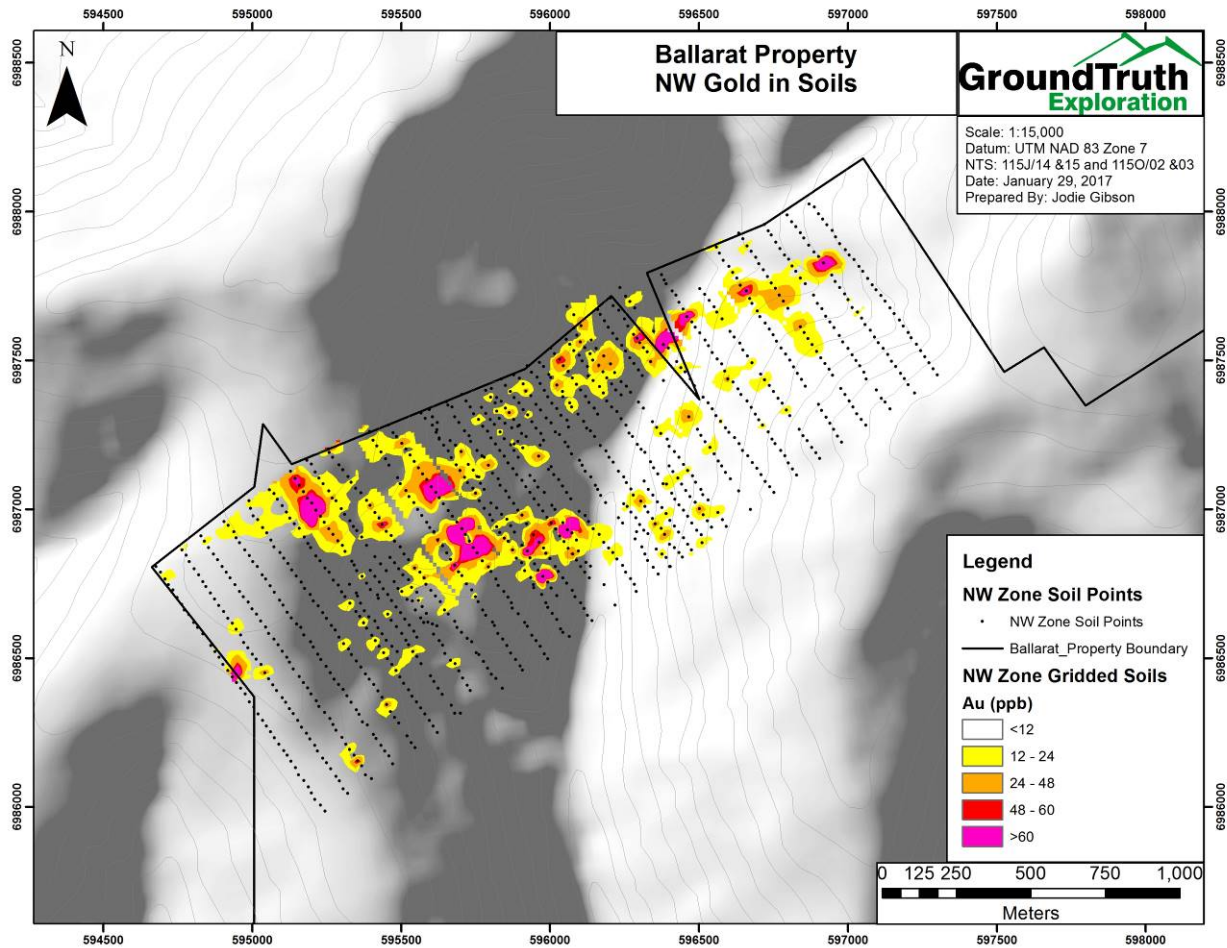

**Figure 6: Gold in 2016 Soil Samples on the Ballarat Property**

NW Zone:

A total of 207 grid soils were placed in the NW Zone in 2016. The soils were placed as infill lines between historic soil lines in the area to help better define NW trending gold in soil anomalies highlighted from historic sampling in the area. Assay values for the 2016 soil ranged from trace to 306 ppb Au. There are no significant multi-element anomalies associated with the gold, though Mo does show a moderate correlation; all be it at low values (max. value of 23 ppm Mo).

Combined with historic sampling on the NW Zone (~2010), the soils define a semi-continuous zone of gold in soils over an approx. 150m x 2.3 km trend along the northern claim boundary. A second, subparallel, gold in soil anomaly occurs approx. 180m to the S and downslope of the upper anomaly. The lower anomaly is less defined, but can be traced over the 2.3km trend. Both anomalies appear to be on trend with gold in soil anomalies on Kinross' Black Fox anomaly, adjacent to the Ballarat property to the NE.

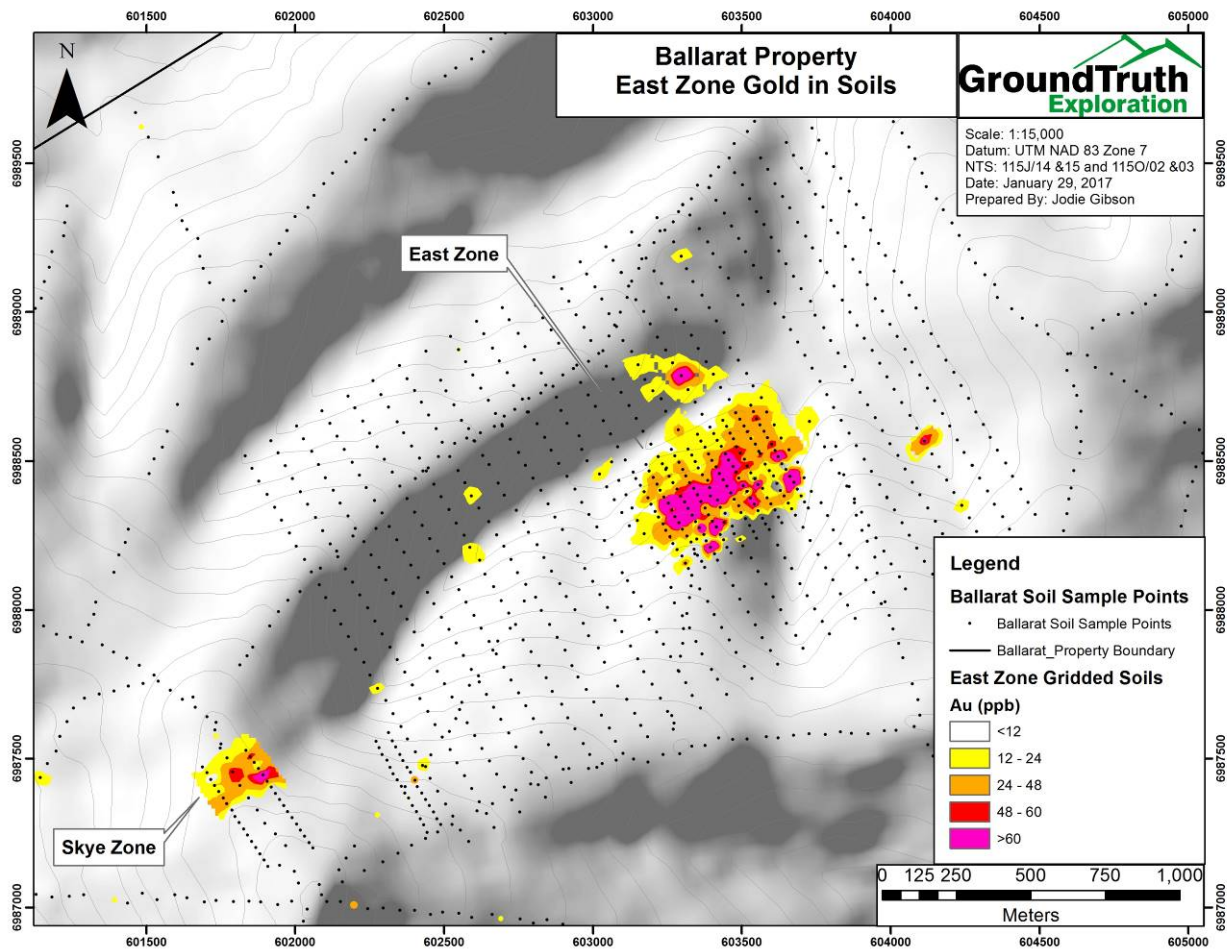

**Figure 7: Gold in historic (2010) and 2016 soil samples on the NW Zone**

**East Zone:**

A total of 917 grid soil samples were placed in the East Zone in 2016. The soils were placed to cover a 415m trend of anomalous gold (26.1 – 163.6 ppb Au) in ridge and spur samples along a NE trending ridge line. The 2016 grid soils over the area were oriented NW-SE with 100m spaced lines and 50m spaced samples. Infill grid sampling at 50m spaced lines and 25m spaced samples was then conducted over a 400m x 450m area covering the primary anomaly. Assay values for the 2016 soils ranged from trace to 297.7 ppb Au, and define an approx. 50m wide x 250m long, NE trending, corridor of Au soil values >50 ppb within a larger, 100m wide x 400m long, zone of Au soil values >30ppb. Like the NW Zone, there are no significant multi-element anomalies association with the gold in soils, however, gold does show a strong correlation with Te; all be it at low levels (max. value of 1.8 ppm Te).

**Figure 8: Gold in historic (2010) and 2016 soil samples on the East and Skye Zones**

Reconnaissance:

A total of 599 reconnaissance samples were collected in 2016. These were primarily designed as 1.) follow up lines adjacent to historic ridge and spur gold anomalies, or 2.) as initial ridge and spur soil coverage over unexplored portions of the property. Additionally, a small “mini” soil grid was placed over the newly discovered Skye Zone. Assays for the reconnaissance soils ranged from trace up to 232.7 ppb Au and defined at least 3 new anomalous zones that warrant follow up work in 2018.

The first anomalous area is located midway between the NW and East Zone’s along the northern boundary of the property (adjacent to Kinross’ Black Fox occurrence). Four recon lines were placed in an approx. 600m x 800m area with assay values ranging from trace to 232.7 ppb Au.

The second anomalous area is the recently discovered Skye Zone, located approximately 1.9 km WSW from the center of the East Zone (Fig.7 above). Three soil lines (44 samples) were placed over a 150m x 400m, N-S trending ridge, where altered and mineralized rocks were discovered during prospecting. Assay values for the soils ranged from trace to 90.8 ppb Au and define 125m x 150m zone of anomalous gold in soils that is open to the north NE and SW. The zone is on trend with the East Zone and the gold in soils are also coincident with a low-level Te anomaly.

The third anomalous area is located approx. 900m SSW of the Skye Zone and consists of two parallel soil lines covering a 100m x 375m area (34 samples). Assay values range from 0.9 – 88 ppb.

#### Soil Sampling Procedure:

All sampling traverses are pre-planned, with pre -specified sampling intervals, typically 50m. Field technicians navigate to sample site using handheld GPS units. The soil sampler arrives at each sample site, identifies the most appropriate location to collect the sample and lays out a sheet of plastic (12"x20" ore bag). The soil sample is taken using an Eijklcamp brand hand auger at a depth of between 20cm and 110cm. Samplers strive to consistently collect C-Horizon sample material. Where necessary (rocky or frozen ground) a prospector's pick ('mattock') is used to obtain the sample.

The soil is laid out on the sheet of plastic in the order it was recovered from the sample hole. Two Standardized photos are taken at each sample site- 1) Sample Location photo: across slope, 5m from sample hole with auger inserted and 2) Sample Profile photo: Close up of sample laid out on ore bag with barcode tag and munsell color chart in photo.

The sampler places the necessary amount of soil (400-500 grams) from the bottom of the hole into a kraft sample bag. The bag labeled with the 3-letter project and tagged with a plastic barcode ID tag containing a unique 7 digit sample identification number is inserted. A plastic barcode ID tag with the sample identification number is attached to a rock or branch in a visible area at the sample site along with a length of pink flagging tape.

A field duplicate sample is taken once for every 25 samples. Both samples are given unique Sample identification number. The data for both samples is recorded and a note is made indicating the duplicate and its corresponding sample identification number. At client's discretion, standard reference material is inserted into the sample stream at an interval of 1:50.

The GPS location of the sample site is recorded with a Garmin GPSMap 60cx or 76cx GPS device in UTM NAD 83 format, and the waypoint is labeled with the project name and the sample identification number. A weather-proof handheld device equipped with a barcode scanner is used in the field to record the descriptive attributes of the sample collected. This includes: sample identification number (scanned into device at sample site), soil colour, soil horizon, slope, sample depth, ground and tree vegetation and sample quality and any other relevant information. As well, the GPS coordinates are entered into the handheld device as a secondary backup in case of GPS failure.

### **6.3 GT Probe Bedrock Interface Sampling**

A total of 425 GT Probe samples were collected over 5 lines on the NW Zone covering an approx. 390m x 600m area with 4 of the lines, and one additional line 1.26 km on trend to the NE. Samples were placed approximately 5m apart and the sampling was designed to cross NE trending soil anomalies along the NW Zone to test for 'in-situ' mineralization at the top of bedrock. Assay values ranged from trace to 1.68 g/t Au and sample depths ranged from 0.4 – 2.5m depth; averaging 1.28m. Gold in the samples show a moderate correlation Mo – Pb and a weak correlation with Te. Overall, the GT Probe samples highlighted spot anomalies, typically, associated with anomalous gold in soils, but failed to highlight any discernable trends in gold mineralization within the NW Zone. However, the GT Probe data is quite useful for mapping lithologic breaks. Standard operating procedures for the GT Probe are detailed in Appendix B.

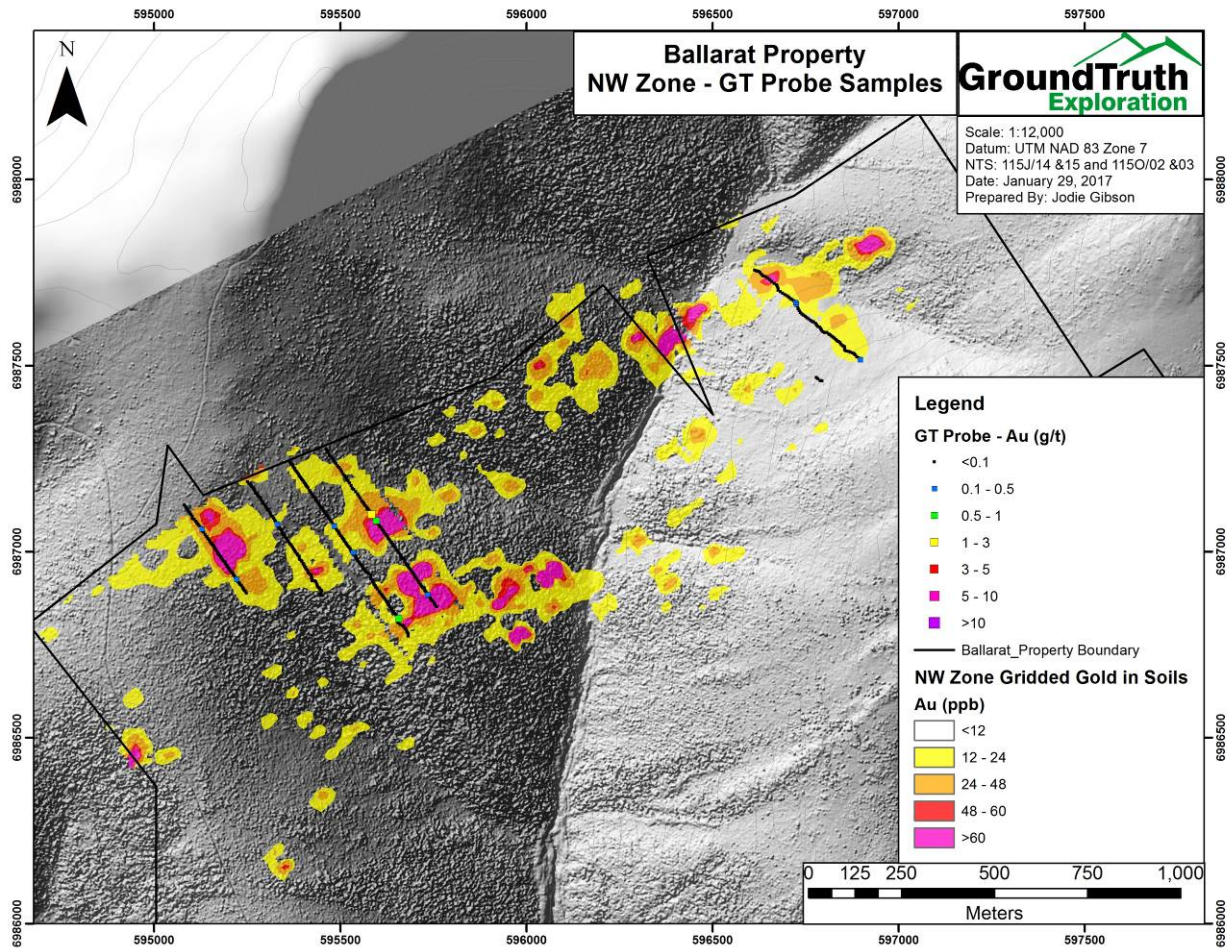

Figure 9: Gold in 2016 GT Probe samples on the NW Zone over gridded gold in soils.

#### 6.4 DC IP - Resistivity

A total of 11.76 line-km of high-resolution DC IP-Resistivity surveys over 28 lines were performed on the NW and East Zones. Individual lines were 420m in length with 5m dipole spacing and were capable of surveying to a maximum depth of approximately 150m pending the topographic setting. Individual electrode stations were surveyed using DGPS to provide topographic control and the lines were processed using both Dipole-Dipole and Inverse Schlumberger arrays. Final profiles consist of merged images for chargeability (ms) and resistivity (Ohm-m) that encompasses both arrays and can highlight both high-angle and inclined features. A full description of the DC IP-Resistivity equipment, standard operating procedures, and data processing/QA-QC is detailed in Appendix B.

NW Zone:

A total of 21 profiles were placed on the NW Zone covering 1.9km of strike length along the gold in soil anomalies in the area. On the southwestern end of the NW Zone (Lines 1 – 12) highlight a series E-NE trending resistivity breaks that correspond to soil and GT Probe anomalies in the area. It should be noted that none of the historic diamond drill holes place on the NW Zone appear to have tested the resistivity breaks. The data in lines 13 – 21 is more difficult to interpret, though significant resistivity and chargeability features do occur. Additionally, there is a distinct, dome shaped, resistivity low feature at the base of several of the lines. See Appendix X for

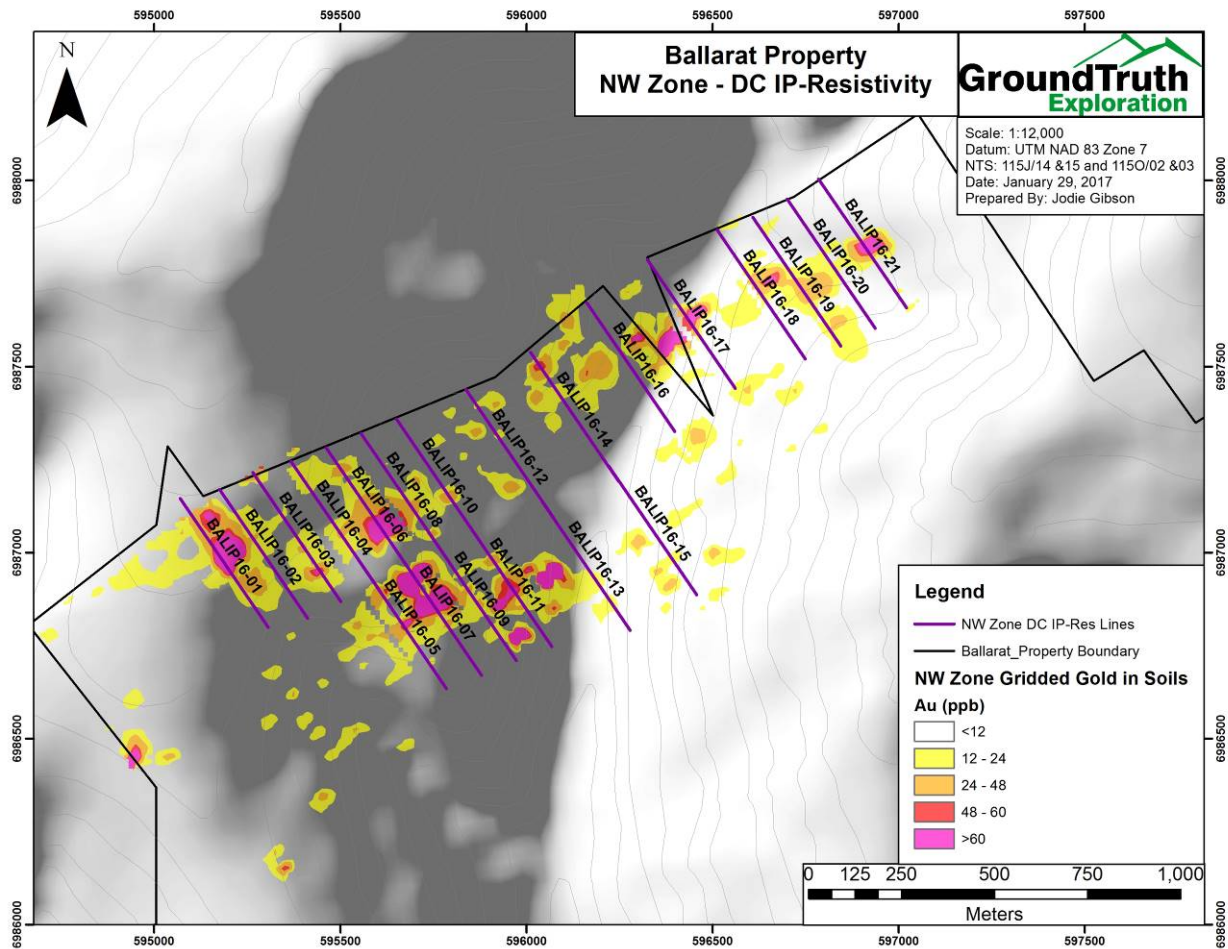

Figure 10: DC IP-Resistivity Lines on the NW Zone

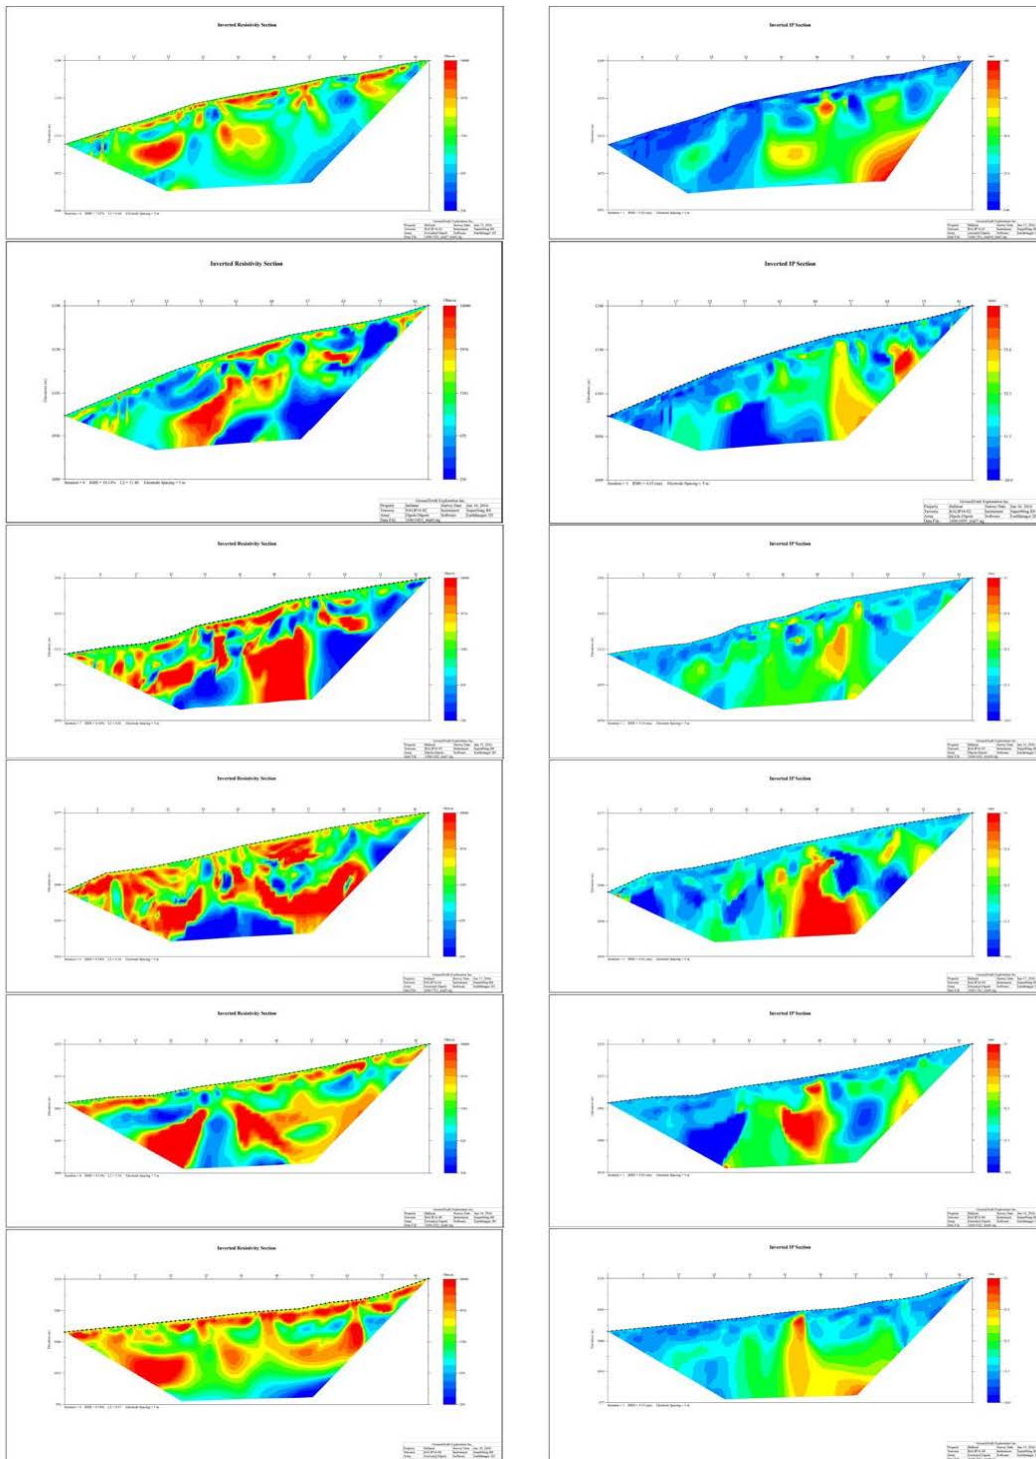

Figure 11: NW Zone - DC IP-Resistivity Sections 1 – 4, 6, & 8. Lines are oriented SE – NW, looking SW.

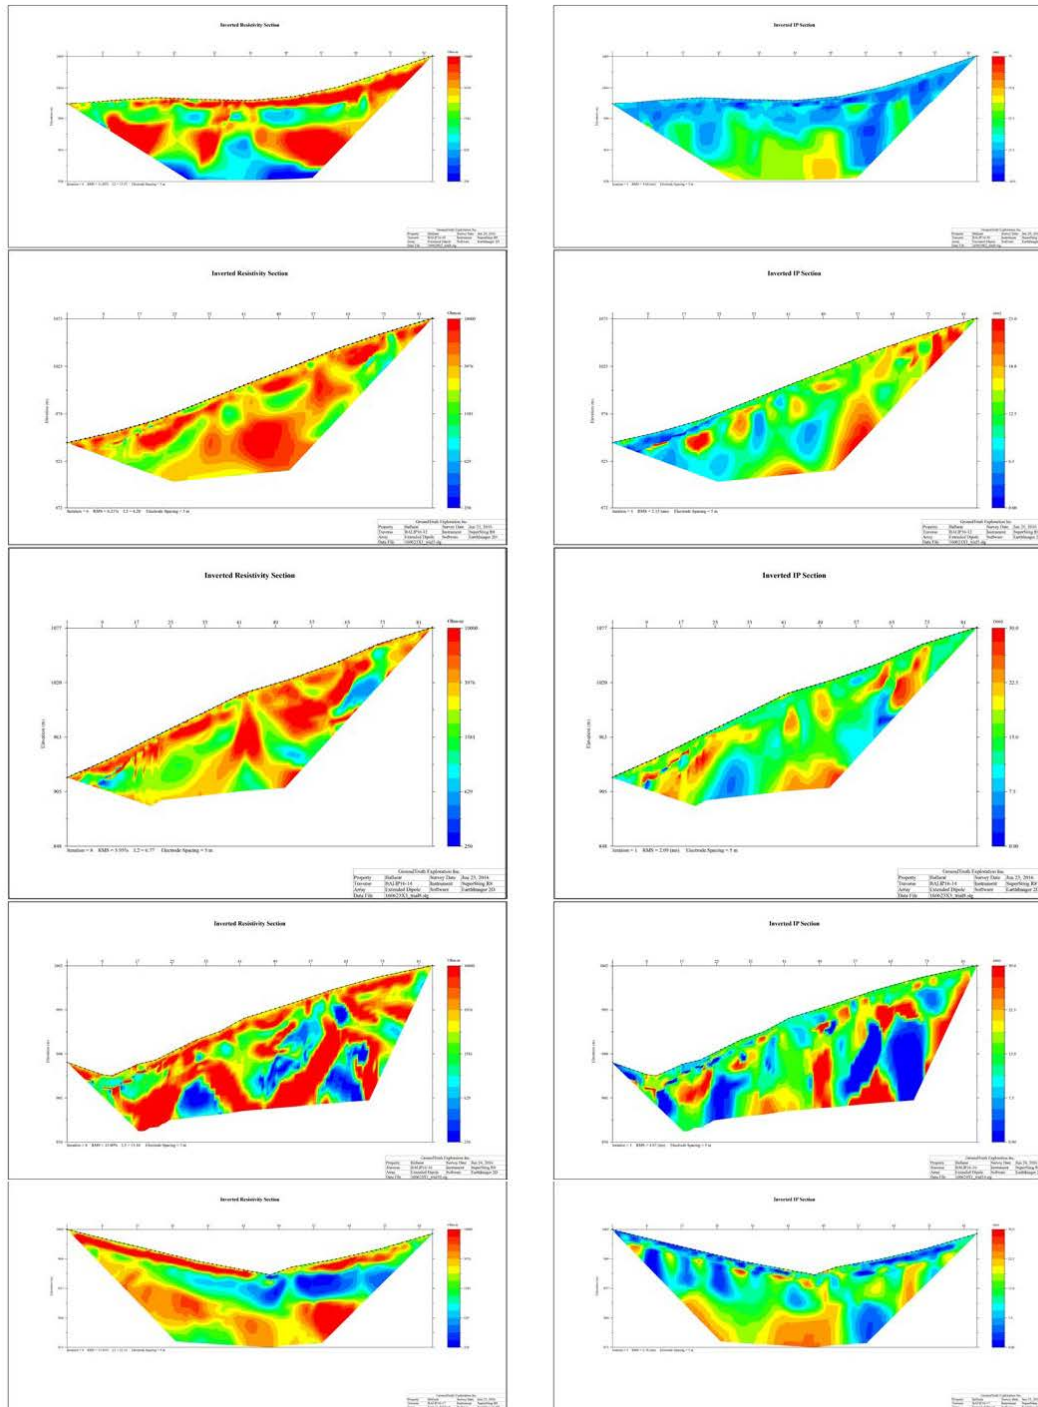

Figure 12: NW Zone - DC IP-Resistivity Sections 10, 12, 14, 16, &17. Lines are oriented SE – NW, looking SW.

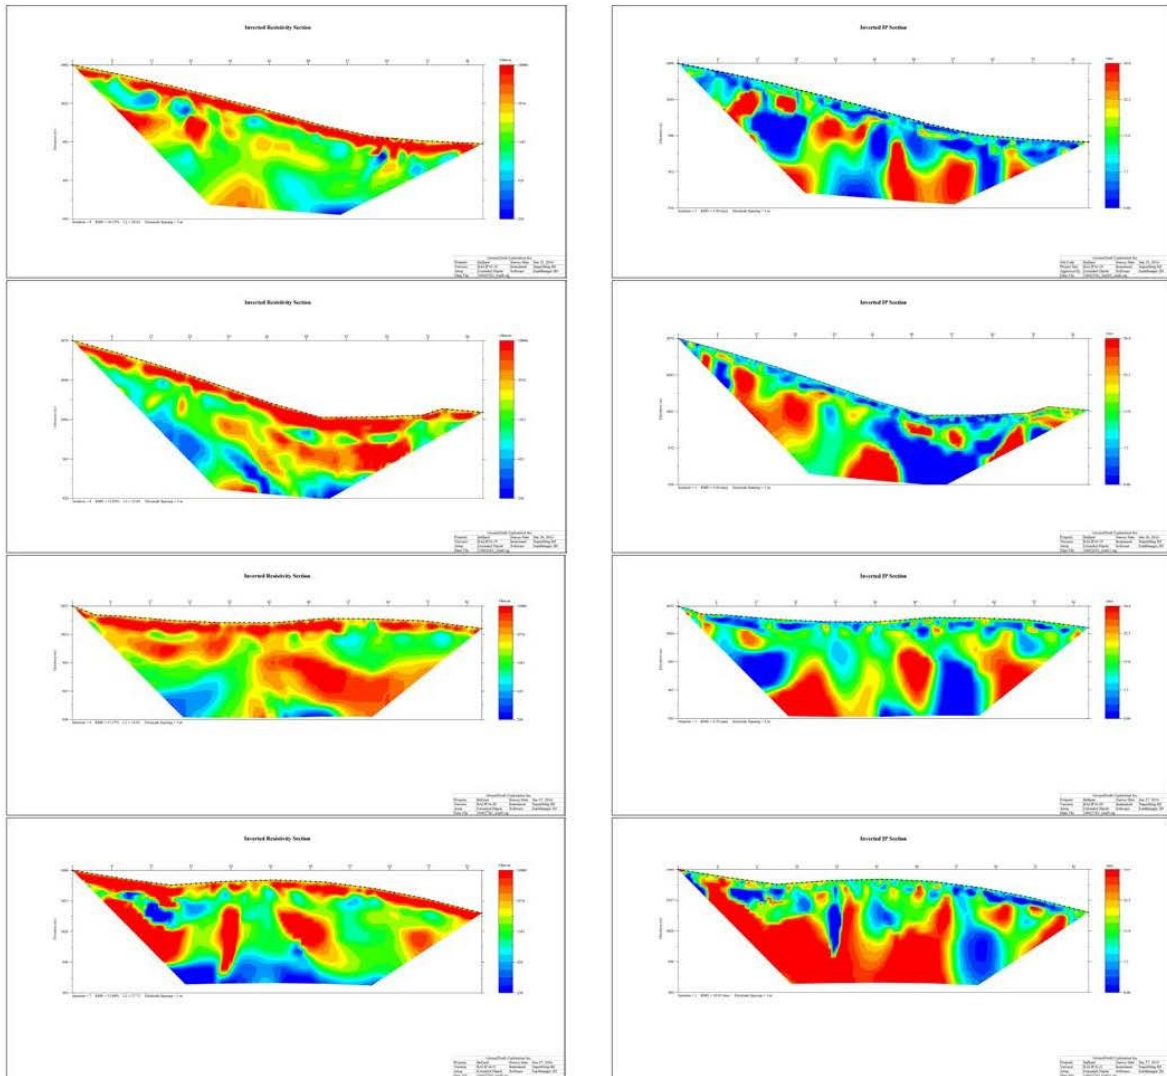

Figure 13: NW Zone - DC IP-Resistivity Sections 18 - 21. Lines are oriented SE – NW, looking SW.

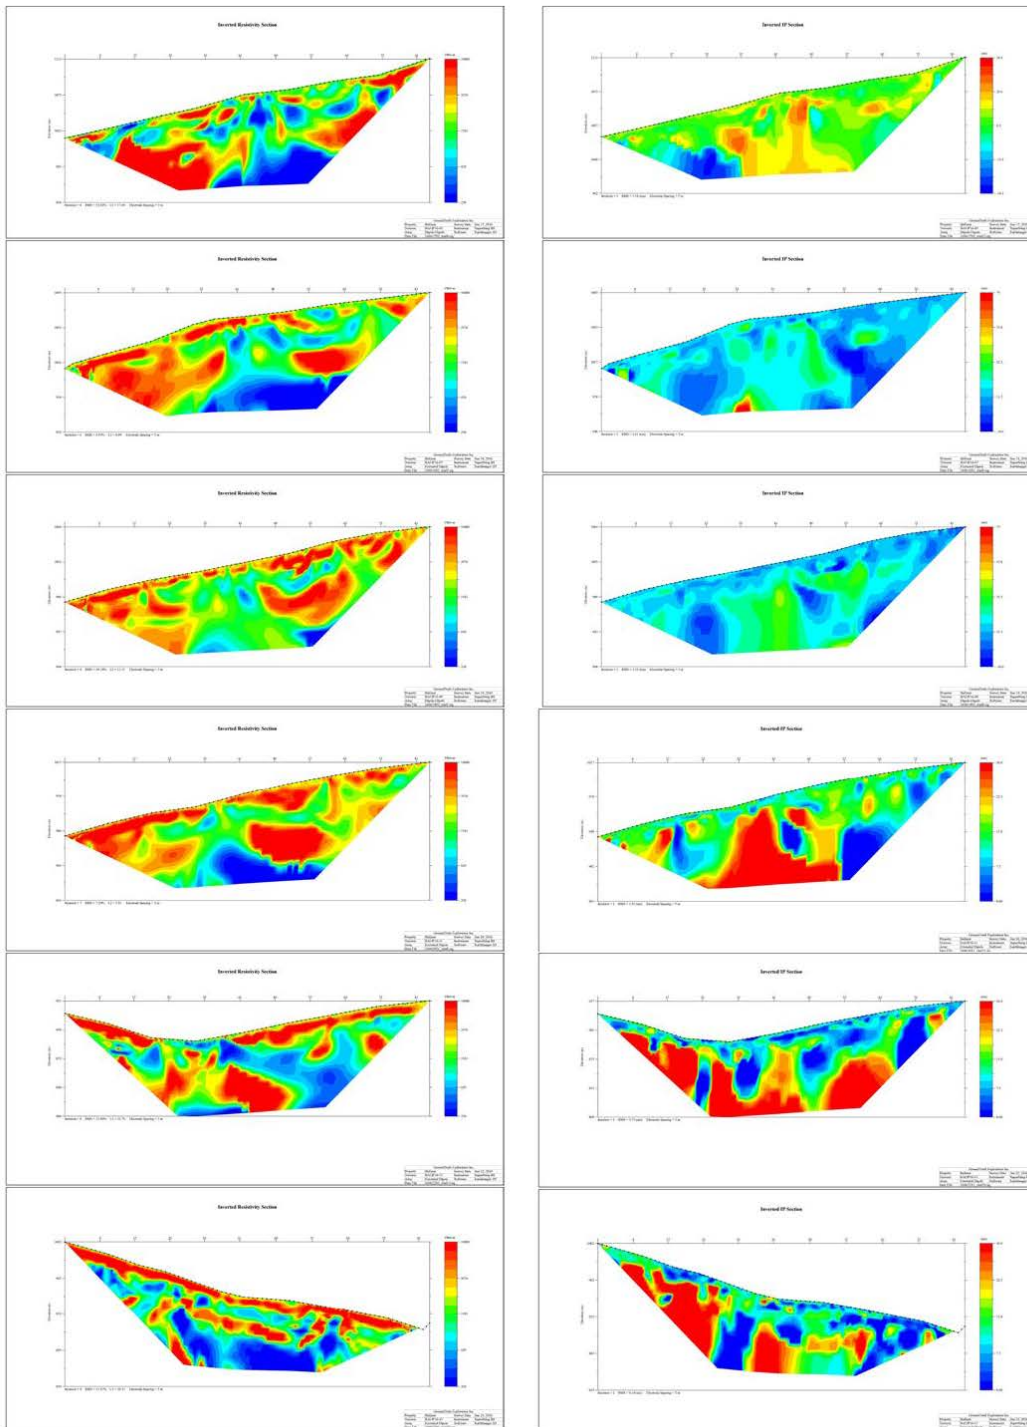

Figure 14: NW Zone - DC IP-Resistivity Sections 5, 7, 9, 11,13, & 15. Lines are oriented SE – NW, looking SW.

East Zone:

A total of 7 profiles were placed on the East Zone covering approximately 590m of strike length along the gold in soil anomaly in the area. Several resistivity and chargeability features of interest were highlighted by the survey, including distinct resistivity breaks. Evaluation of the IP-Res data is ongoing in context of RAB drilling in the area. In general, distinct resistivity breaks and/or resistivity lows appear to correspond to lithologic changes and/or zones of sericite alteration. Another interesting feature of the surveys is a distinct resistivity high 'plating' that occurs along the topographic profile of several of the sections. This likely represents talus cover and indicates that soil geochemistry may not be as effective in those areas.

### 6.5 X-CAM Aerial Photographic Survey

A 38.75 sq.km X-CAM aerial photographic survey was completed on the property in June 2016. The survey covers the entire property (minus new claims staked – see section 3 “Claim Information” above) and includes a 10cm resolution color image and 2m DEM of the property. A full description of the DC IP-Resistivity equipment, standard operating procedures, and data processing/QA-QC is detailed in Appendix B.

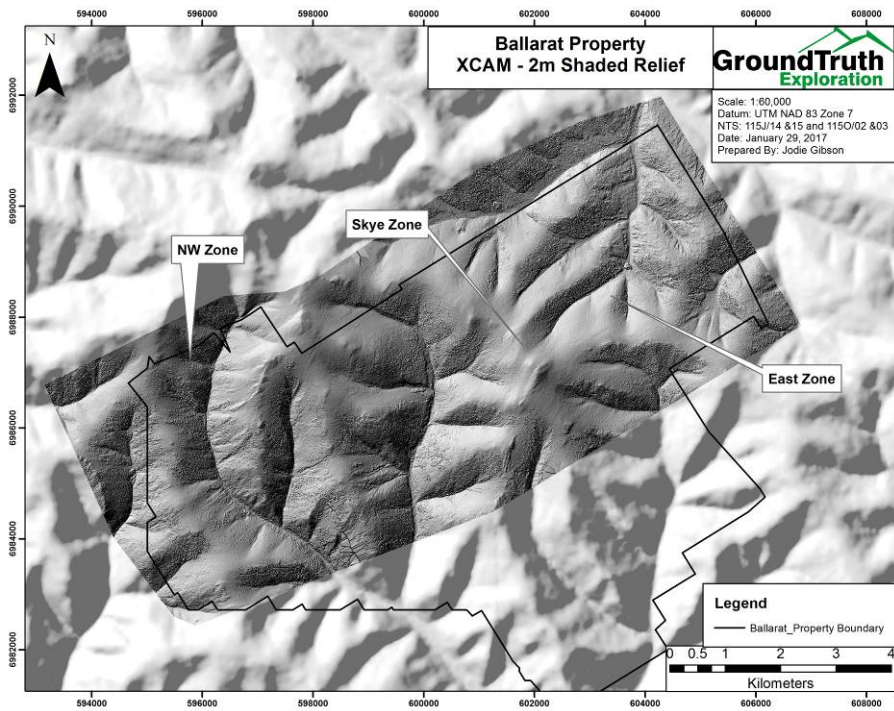

Figure 19: X-CAM 2m resolution shaded relief digital elevation model of the Ballarat property.

## 6.6 Geologic Mapping and Prospecting

Geologic mapping on the Ballarat property is challenging due to poor exposure, however, lithologic changes and structures can be inferred through a combination of methods including outcrop and float mapping; geochemical data from soil and GT Probe sampling; geophysical surveys; and drilling data where available. Activities in 2016 were focused on the NW Zone, East Zone, and proximal to those areas. A total of 75 geologic stations were recorded with information on lithology, alteration, mineralization, and/or structure noted where available. These stations include 49 rock grab and chip samples submitted for analysis. Geologic mapping activities also lead to the discovery of the Skye Zone.

### NW Zone:

A total of 18 rock grab and chip samples were taken from the NW Zone and adjacent areas. Assay values ranged from trace to 1.49 g/t Au with 2 samples from the area assaying >0.1 g/t Au.

The NW Zone is underlain by a package of amphibolite gneiss/mafic schist, felsic schist, felsic gneiss, and quartz-mica schist (topographically higher to lower) and appear to form a antiformal structure along the NW zone corridor based on regional geology and structural measurements. Based on historic descriptions, mineralization appears to be related to a discrete quartz veins and quartz vein breccias, however, float of the felsic gneiss with sericite alteration and stockwork quartz veining was found by the author in the area. Additionally, there is a unique 1-5m zone of pervasive silicification and strong sulfide mineralization along the contact of the amphibolite and felsic schist near the northern claim boundary that was evidently the focus of historic trenching efforts on the property. The samples of the silicified zone didn't return any significant results for gold, however, they contain fuchsite and were anomalous in As, Cr, and Mo. The highest assay return was of a galena bearing quartz vein exposed in one of the trenched that ran 1.49 g/t Au and 693 ppm Pb.

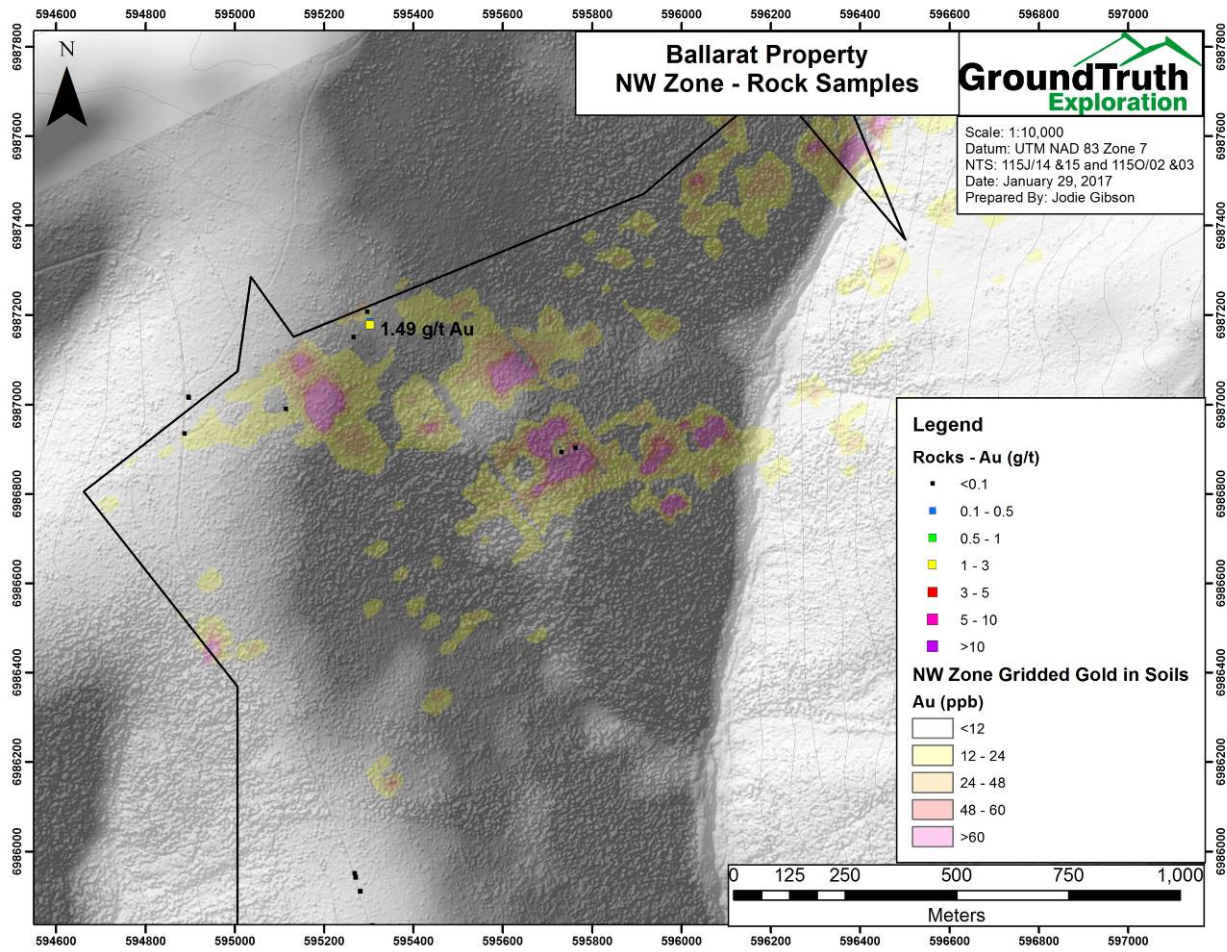

Figure 20: NW Zone prospecting rock sample locations.

**Figure 21: Strongly silica and fuchsite altered rock with 3-5% disseminated pyrite from amphibolite – felsic schist contact on the NW Zone.**

**Figure 22: Galena bearing quartz vein from NW Zone. Sample 1426312; assayed 1.49 g/t Au & 693 ppm Pb.**

*East Zone:*

The East Zone is underlain by a NE striking, moderately S dipping package of amphibolite gneiss (south) and felsic gneiss (north). The lithologic contact appears to form the southern boundary of the soil anomaly in the East Zone area. Additionally, there were minor float pieces of felsic intrusive and mafic dikes in the area. There is no bedrock exposure in the immediate East Zone area and lithology was determined through a combination of talus mapping, soil geochemistry, regional outcrop exposures to the southwest of the East Zone and subsequent RAB drilling. The East Zone is cut by the NW-SE trending Thistle Creek Fault to the NE and is inferred to be cut by E-W, and potentially N-S, trending 2<sup>nd</sup> and 3<sup>rd</sup> order splay of the Thistle Creek Fault. Mineralization and alteration in the area consists of talus float pieces of strong to weakly, quartz-sericite-ankerite altered felsic gneiss with disseminated relict pyrite and minor quartz veining.

A total of 16 rock grab samples were taken from the East Zone. Assay values ranged from trace to 0.759 g/t Au with 5 samples from the area assaying >0.1 g/t Au. The samples had no significant anomalous multi-element associations with exception of one sample of strongly quartz-sericite altered felsic gneiss that ran 0.587 g/t Au and 19.5 ppm Te.

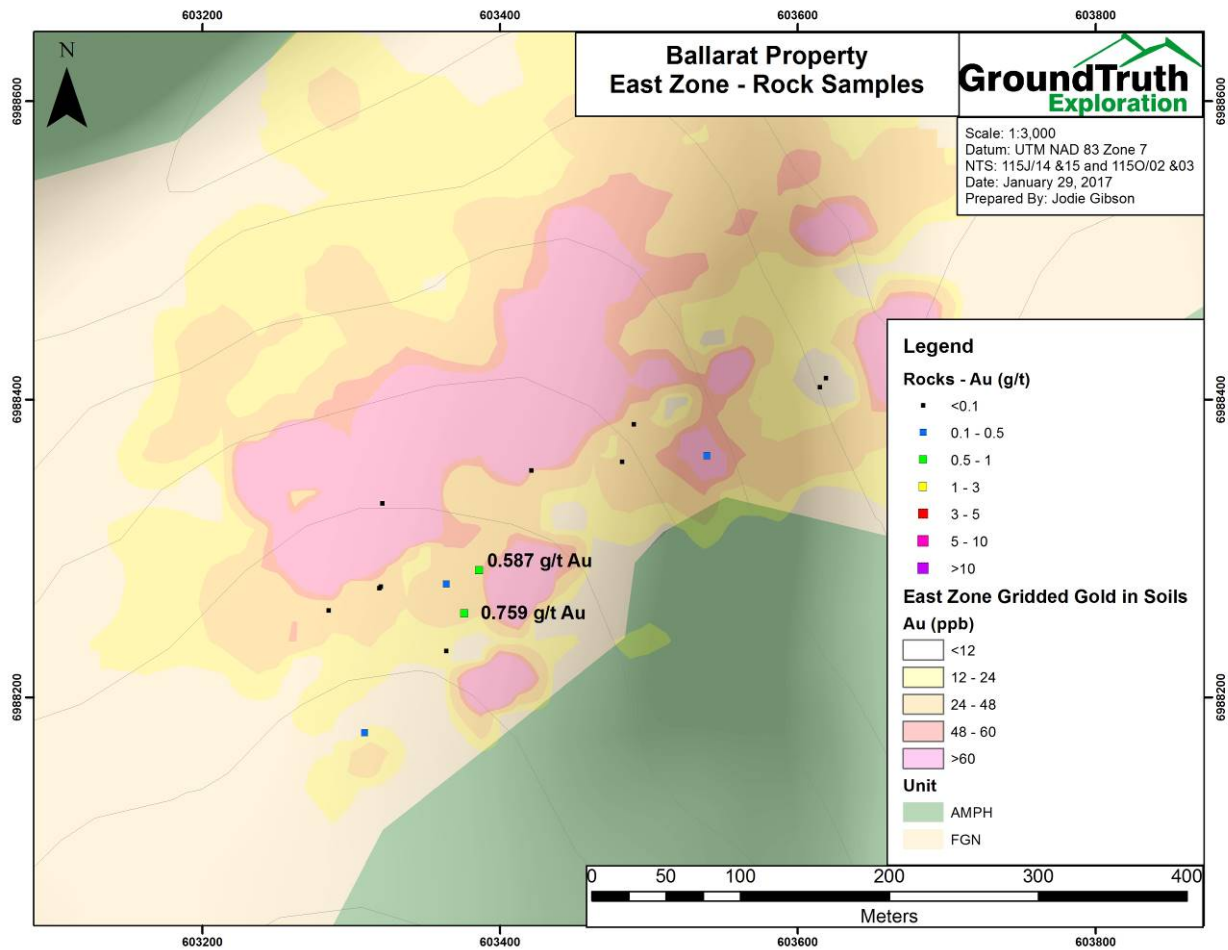

Figure 23: East Zone prospecting rock sample locations.

**Figure 24: Quartz-sericite altered felsic gneiss with disseminated pyrite from the East Zone. Sample assayed 0.759 g/t Au.**

Skye Zone:

The Skye Zone was discovered during geologic mapping activities on the East Zone. It occurs in a saddle on the N side of a prominent peak, approx. 2km SW of the East Zone. The geology of the area is similar to that of the East Zone with amphibolite to the south and forming the peak exposures and the contact with felsic gneiss to the north along the

base of the peak. Within 100m of the contact, along a flat saddle, there is felsenmeer with abundant pieces of strong quartz-sericite-ankerite altered felsic gneiss with 1-5% disseminated relict pyrite and abundant stockwork quartz veining. The altered-mineralized material was traced over an approx. 100m x 150m area and is open to the NE and SW. Meter-scale blocks of bull quartz vein float with locally coarse pyrite, chalcopyrite, and/or galena are also common along the northern extent of the area.

A total of 15 rock grab samples were taken from the Skye Zone. Assay values ranged from trace to 0.275 g/t Au with 2 samples >0.1 g/t Au. Thirteen of the samples were of the altered and mineralized felsic gneiss and were generally associated elevated Mo (up to 19.5 ppm) & Pb (up to 67.8 ppm). Two of the samples did not return any anomalous gold assays, however, did have strongly anomalous Ag (53.1 g/t & >100 g/t), As (up to 771 ppm), Bi (up to 20.6 ppm), Cu (up to 475 ppm), Pb (up to 122 ppm), Sb (up to 38 ppm).

**Figure 26: Quartz-sericite altered felsic gneiss from the Skye Zone with quartz veining and foliation parallel pyrite. Sample assayed 0.157 g/t Au.**

**Figure 27: Historic claim post from the Skye Zone.**

## **6.7 RAB Drilling**

A total of 1728.15m of RAB drilling over 18 holes was conducted on the East Zone in the Fall of 2016. Additional drilling was proposed/discussed on the Skye Zone and NW Zone but were not conducted due to seasonal/weather constraints. Target depth for the holes was 100.58m (330 ft) and all but two of the holes reached target depth. Additionally, eleven of the holes were surveyed using an optical downhole televiewer. The televiewer provides an oriented, high-resolution, 360° digital image of the drillhole that can be utilized to aid structural and lithologic interpretations of the drilling.

**Table 3: 2016 RAB Collars**

Hole_ID	Azimuth	Dip	Length_ft	Length_m	Easting	Northing	Elevation_m

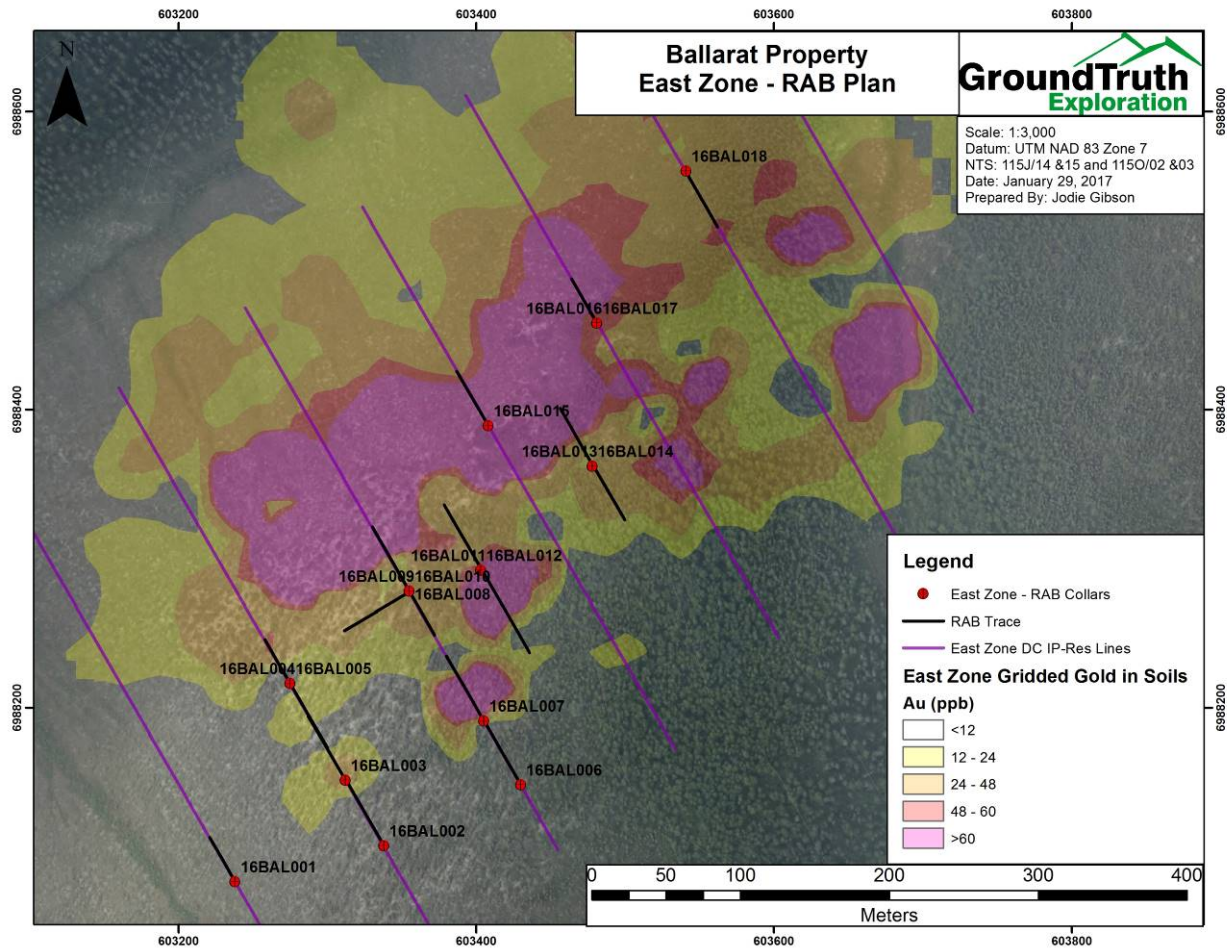

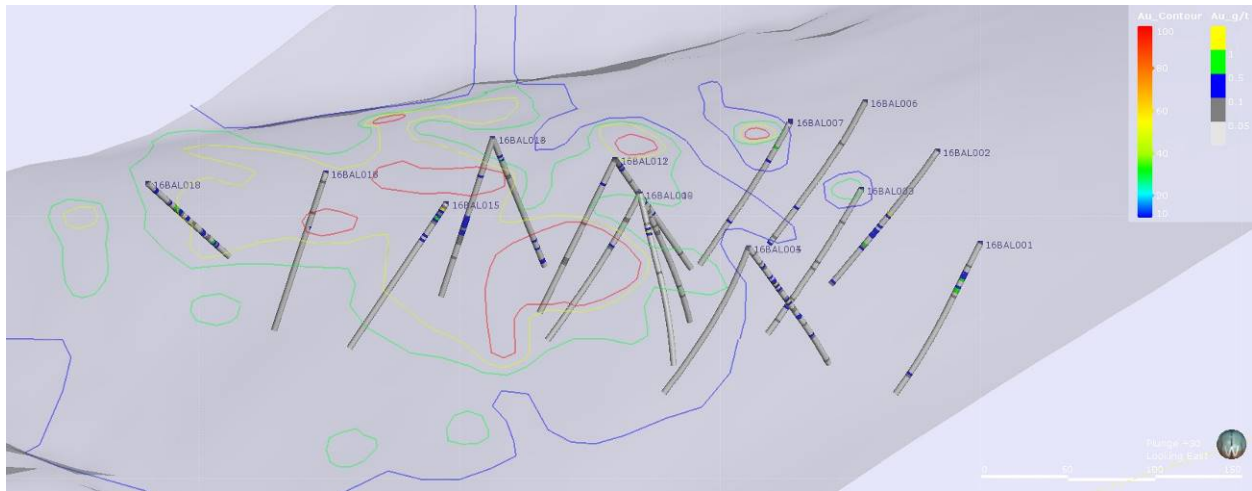

Figure 28: East Zone RAB Drilling Plan map.

Figure 29: East Zone RAB Plan.

The drill holes were sampled continuously every 1.52m (5 ft). Additionally, alternating QA-QC samples consisting of a certified standard, coarse blank, or duplicate were inserted into the sample stream every 10<sup>th</sup> sample. The QA-QC data for the project was managed and has been verified by the author. Assay values for the RAB drilling ranged from trace to 1.46 g/t Au. A summary of the drilling intercepts is in Table 4 below. Standard operating procedures for the RAB drill are detailed in Appendix B.

**Figure 30: East Zone – Oblique view of RAB drill holes with gold assays. Contoured gold in soils along surface trace.**

The drilling intercepted at least three, likely four, distinct lithologies consisting of amphibolite gneiss (AMPH), felsic-intermediate orthogneiss (FGN), mafic dikes, and, likely, felsic dikes. The AMPH is typically dark green and strongly foliated consisting of dominantly of hornblende, biotite/chlorite, and plagioclase with interlayered, up to 1m thick, plagioclase rich horizons. It is easily discernable in geochemical values by elevated Al, Ca, Co, +/- Cr, Fe, Mg, +/-Na, Ni, Sc, Ti, & V and depleted Ba, K, La, & Th.

The AMPH (south) appears to be in sharp contact with the FGN (north) and the contact trends N-NE along the East Zone ridge, subparallel to the southern boundary of the gold in soil anomaly. The FGN consists dominantly of quartz-feldspar-biotite and ranges from biotite poor to rich. Both units dip moderately to the south (50 – 70°) based on geologic mapping and optical televiewer surveys from the area.

The mafic dikes are generally black, magnetic, and range from fine grained to porphyritic with mm-scale plagioclase phenocrysts. They have a similar geochemical signature to the AMPH, but typically with significantly higher Ni (>40 ppm) and Cr (>100 ppm). The dikes appear to cross-cut the FGN, but a dominant orientation has not been determined. They often appear to occur within zones of alteration and mineralization as well, but it is unclear if they are genetically related or simply utilizing pre-existing structures.

Lastly, float pieces of quartz-feldspar rich felsic dikes were observed in the East Zone area and it is anticipated that they were intercepted during the drilling as well. However,

if they were, they weren't discernible from the FGN host rock in RAB chips or televiewer imagery.

Alteration and mineralization at the East Zone appears to be hosted primarily within the FGN and consists of broad zones (up to 50m) of sericite +/- ankerite alteration and disseminated pyrite. The altered zones are discernible in RAB chips by a distinct "bleaching" of the rock by the addition of sericite and associated drop in biotite content. The strongest mineralized zones are accompanied by an increase in quartz content; related to silicification of the host rock and/or quartz veining. Geochemically, the mineralization is complex. Elevated gold values (>0.1 g/t) are associated, either directly or spatially, with a variety of elevated elements including Ag, As, Bi, Cu, Hg, Mo, Pb, Te, & Zn. The strongest direct correlation with elevated gold is an assemblage of Ag-Hg-Te, whereas, a secondary population of As-Bi-Cu-Mo-Pb-Zn (+/- Ag) generally correlate regardless of the gold content.

## **6.8 Sample Preparation, Laboratory Analysis, & QA-QC**

All samples collected on the Ballarat Project in 2016 were sent to Bureau Veritas Laboratories ("BV") for preparation and analysis. After field collection, all samples were returned in labelled rice bags to Ground Truths yard in Dawson City, YT where the samples were inspected and sample numbers verified versus GT's database. The samples were then shipped to BV's preparation laboratory in Whitehorse, YT and prepared for analysis per requested protocols. Finally, a pulp of the sample was sent to BV's Vancouver laboratory for final preparation and analysis. Specific methodologies utilized are summarized below.

### Soils

All soil samples were prepared using procedure SS80 (crush, split, and pulverize 250g of material to -200 mesh) and analyzed by methods FA430 (30g Fire Assay with AAS finish) and AQ200 (aqua-regia digest of 0.5g of material followed by ICP-MS analysis for 37 elements).

### Rock, GT Probe, & RAB Samples

All rock samples were prepared using procedure PRP70-250 (dry at 60° C and sieve 100g of material at -80 mesh) and analyzed by method AQ201 (aqua-regia digest of 15g of material followed by ICP-MS analysis for 37 elements).

### QA/QC

The reported work was completed using industry standard procedures, including a quality assurance/quality control program ("QA/QC"). For soil samples, a field duplicate was

inserted into the sample stream every 25<sup>th</sup> samples. For RAB samples alternating QA/QC samples consisting of a certified standard, coarse blank, or duplicate were inserted into the sample stream every 10<sup>th</sup> sample. No specific QA/QC samples were inserted in the field for prospecting or GT Probe samples, however, certified standard, blank, and duplicates were inserted in to the sample stream by the laboratory. The QA/QC data for the project has been reviewed by the author and no significant QA/QC issues were noted.

## 7 Discussion and Interpretation

The Ballarat property has strong potential to host significant gold mineralization. It covers/is adjacent to the headwaters of four placer gold bearing creeks (Ballarat, Kirkman, Thistle, & Barker Creeks); is cut by regional scale structures and has evidence of multiple ductile-brittle deformation events; is underlain by chemically reactive and/or brittle host rocks; and has robust geochemical anomalies. While the results of 2016 exploration activities weren't significant (in a market sense), they were positive. At the NW Zone, 2016 exploration results indicate the potential for km-scale, potentially mineralized, structures that are untested (despite historic diamond drilling in the area) and warrant follow up drilling. At the East Zone, RAB drilling intersected significant zones of alteration, all be it at low grades, adjacent to a regional scale fault and has indications for at least two hydrothermal events. This is important because it demonstrates that there were active, gold bearing, hydrothermal system(s) in the area. The Skye zone is a new discovery at surface that was missed during historic exploration efforts on the property, is open for expansion along strike/is on trend with the East Zone, and warrants drill testing. There are also new anomalies identified from reconnaissance soils that warrant follow up grid sampling and prospecting.

### NW Zone:

The NW Zone lies along a south facing slope along the on the north side of upper Ballarat Creek and is underlain by a package of amphibolite gneiss/mafic schist, pyrite bearing felsic schist, felsic orthogneiss, and quartz-mica schist. The amphibolite, mafic schist, and felsic gneiss form the ridgeline along the northern property boundary and, where exposed, show evidence of strong folding, and where exposed strike to the SE and dip moderately to the NW. Topographically, above the amphibolite is a SW striking and N dipping sequence of quartz-mica schist and quartzite that forms the bulk of Thistle Mt. Topographically lower and below the amphibolite package is a quartz-feldspar-biotite gneiss (felsic gneiss) which appears to form the bulk of the hillside to the valley. At the base of the sequence and exposed in the valley bottom is quartz-mica schist (QMS). The QMS unit, however, strikes to the NE and dips moderately to the south. It is unclear if the

QMS exposed in the headwaters of Ballarat Creek are related to those exposed on Thistle Mt., however, the abrupt change in dip indicates the NW Zone area is within the core of an antiformal structure.

Mineralization at the NW Zone is interpreted to be associated with an E-NE oriented splay(s) from the Ballarat fault. Direct observations of mineralization in the area are few due to cover and have generally consisted of float of discrete, often sulfide bearing, quartz veins and quartz vein breccias. However, pieces of strongly quartz-sericite altered felsic gneiss with stockwork quartz veining were noted, indicating more robust zones of alteration and mineralization do occur. Overall, three primary factors appear to be associated with localizing mineralization in the NW Zone: 1.) Host rock, 2.) pre-mineral ductile deformation, and 3.) brittle, likely syn-mineral, faulting. While mineralization can occur over the trend in any of the host rocks; adjacent or distal to interpreted faults; and subparallel or normal to foliation the primary focus of exploration should be along interpreted brittle structures within the felsic gneiss (and/or contact with the AMPH) and, specifically, at the intersection of the brittle structures with the interpreted fold hinge.

#### East Zone:

Base on the work performed to date, mineralization at the East Zone appears to be network of N and NE trending, steeply dipping(?), structures associated with broad (up to 50m) halos of sericite alteration with silicification and quartz veining. Mineralization consists dominantly of disseminated pyrite +/- chalcopyrite. No other sulfide minerals were directly observed/identified, however, are indicated based on the RAB geochemistry and likely including arsenopyrite, galena, sphalerite, stibnite, and/or Bi-Te minerals. The mineralization appears to be preferentially located within felsic gneiss, likely due to favorable rheology, though alteration is also noted within the amphibolite. Additionally, the geochemistry indicates there are at least two mineralizing events on the East Zone, and they likely utilized same structural framework:

- 1.) Au-Ag-Hg-Te) signature: Similar to known occurrences on the White Gold property (McKinnon showing and deep zone on Golden Saddle). Research suggests they formed at a higher, epizonal, crustal levels along the same structural corridors that host mid-Jurassic aged, "Golden Saddle style" mineralization. They can be high grade (>5g/t Au & >100 g/t Ag) in the right structural setting, however, the best continuity in mineralization is seen in alteration-mineralization formed at deeper, mesozonal, conditions with a Au-Mo+/-Pb signature (Golden Saddle and QV). That being said, you can get both higher/epizonal and lower/mesozonal level assemblages overprinting the same structural corridor.

- 2.) Ag-As-Bi-Cu-Pb-Sb-Zn signature: Appear to be late and related to Cretaceous intrusive activity. The East Zone is approximately 30km north of the Casino Cu-Mo-Au porphyry deposit and 20m NW from the Bridget Cu-Mo+/- Au showing. Similar “intrusion-related” occurrences are also known on the nearby Betty and Coffee properties. Felsic-mafic intrusive dikes are recognized on the East Zone and likely related to this style of mineralization and utilized the same structural pathways as earlier, Au-Ag-Hg-Te event. However, it may have also overprinted the earlier event, potentially downgrading the overall gold content(?).

Skye Zone:

The Skye Zone is very similar, and on trend with the East Zone, but with better exposure, more quartz veins, and a Au-Mo-Pb geochemical signature. Based on geochemistry from rock grab samples there is evidence of a second, Ag-As-Bi-base metal, event as well, however, additional work including geologic mapping, DC IP-Resistivity surveys, and (RAB) drilling are required to fully assess the area.

## 8 Recommendations

Specific recommendations for continued exploration on the Ballarat property include an additional grid and reconnaissance soil samples, additional IP-Resistivity surveys, additional geologic mapping and prospecting, and initial RAB drilling on the NW and Skye Zones'. Potential numbers and estimated costs are summarized below. Note, this does not include an estimate for GT Probe sampling which would need to be assessed on an area by area basis, or expansion of the existing magnetic and radiometric survey which would need to be assessed as Stakeholder's budget allows.

Soil Sampling:

2,500 grid soils focused on the central portion of the property covering all identified gold in soil anomalies from 2016 sampling. An additional 500 reconnaissance samples on un/under explored areas on the property.

*3,000 Total Samples – Est. \$135,000 (all in)*

IP-Resistivity

East Zone & Skye Zone – 8 Lines – Est. \$28,000

New area/as needed – 10 Lines – Est. \$31,500

*18 Lines – Est. \$59,500*

---

Geologic Mapping/Prospecting/Project Management

Est. \$45,000

RAB Drilling:

NW Zone – 15 Holes – Est. \$337, 500

Skye Zone – 5 Holes - Est. \$112,500

20 RAB Holes (2,000m) - \$450,000 (all in)

*Estimated Budget - \$689,500*

10% Contingency - \$68,950

**Total Est. Budget - \$758,450**

## 9 2016 Project Expenditures

<b>Ballarat 2016 Project Expenditures</b>	
<b>PHASE 1</b>	
Geologic Mapping/Prospecting/Project Management	\$ 5,963.76
Soil Sampling	\$ 17,052.05

## 11 Qualification

I, Jodie L. Gibson, hereby certify that:

1. I am a project geologist with Ground Truth Exploration., 109 Raspberry Lane, Dawson City, YT Y0B 1G0.
2. I am a graduate of Indiana State University, with a B. Sc. degree (2003) and a M.Sc. degree (2006) in Geology. I have been involved in geological mapping, mineral exploration and the management of mineral exploration companies continuously since 2007.
3. I am a member in good standing of the Association of Professional Engineers and Geoscientists of the Province of British Columbia, Registration No. 162701
4. I am the author of this report on the 2016 geochemical, geophysical, geological, and airphotogrammatry surveys conducted on the Ballarat Project.
5. The report is based on a literature review, private company reports, and on observations from the 2016 work program.
6. I designed, implemented, and managed the 2016 program on the Ballarat Property.

Dated at Vancouver, B.C. this 31<sup>st</sup> day of January, 2017.

Jodie L. Gibson, P.Geo.

## 11 Qualification

I, Jodie L. Gibson, hereby certify that:

1. I am a project geologist with Ground Truth Exploration., 109 Raspberry Lane, Dawson City, YT Y0B 1G0.
2. I am a graduate of Indiana State University, with a B. Sc. degree (2003) and a M.Sc. degree (2006) in Geology. I have been involved in geological mapping, mineral exploration and the management of mineral exploration companies continuously since 2007.
3. I am a member in good standing of the Association of Professional Engineers and Geoscientists of the Province of British Columbia, Registration No. 162701
4. I am the author of this report on the 2016 geochemical, geophysical, geological, and airphotogrammatry surveys conducted on the Ballarat Project.
5. The report is based on a literature review, private company reports, and on observations from the 2016 work program.
6. I designed, implemented, and managed the 2016 program on the Ballarat Property.

Dated at Vancouver, B.C. this 31<sup>st</sup> day of January, 2017.

Jodie L. Gibson, P.Geol.

# Geochemical, Geophysical, Geological & Airphotogrammetry Survey Report on the Ballarat Project

Thistle Mountain area, Yukon Territory

## Volume II - Appendix

**In support of YMEP Project No. 16-076  
Target Evaluation Module  
Yukon Mineral Exploration Program**

Kit 3 - 14	YC07107 - 118
Tik 1 - 50	YC95394 - 443
Tik 51 - 82	YC95302 - 333
BA 1 - 110	YD72511 - 802
Bal 1 - 142	YE83761 - 902
Bal 165 - 168	YE83925 - 928

### **Dawson Mining District**

NTS: 115J/14 & 15 and 115O/02 & 03

Latitude: 63° 00' N Longitude: -139° 01' 50" W

Work Performed On: June 14 – Nov. 9, 2017

Prepared for Stakeholder Gold Corp.  
By GroundTruth Exploration

Written by: Jodie Gibson, P.Geo. January 31, 2017

**Appendix B: DC IP-Resistivity, GT Probe, X-CAM, and RAB Drill SOP**

## **GT PROBE STANDARD OPERATING PROCEDURE**

**Personnel** : The surveys are conducted by the following GroundTruth personnel :

Lead GT Probe Operator  
XRF Sampling Technician  
Line Cutter / Sampling Assistant / Surveyor

**A. Instruments and Equipment** : The crew is equipped with the following instruments and equipment.

### **GT Probe Overview** :

The GT Probe is a remotely controlled tracked platform with a hydraulically operated bedrock interface sampler mounted on a tilting mast. The GT Probe has 1650 sq. inches of track coverage with less than 1.0 psi ground pressure allowing it to be extremely versatile and low impact in the field. The entire unit is powered by a gasoline engine and is completely hydraulically operated. Samples are collected at 5m intervals in grid formation reaching depths between 2 - 4m capturing the bedrock interface. 35 - 40 samples with weights averaging 5kg/m are collected daily and analyzed by our onsite XRF technician. Each sample location is surveyed by DGPS. Daily data collected is sent nightly via satellite internet to our main headquarters and then available for client the following day.

### **GT Probe Technical Specifications**

- Length – 96”
- Width – 50”
- Height – 48”
- Weight – 2450 lbs
- Probe Down Force – 18,000lb
- Probe Retraction Force – 25,000lb
- Track Surface Area – 1650 sq. inches
- Less than 1.0 psi ground pressure
- 27hp Gasoline Engine
- Hydrostatic Drive
- Wireless Remote Driving Capability
- 2 sling loads with Astar Helicopter

### **Sample Tube Specifications – Small / Large**

#### **Small Tooling**

- Inside Diameter – 38.1mm
- Outside Diameter – 57.15mm
- Length – 100cm

#### **Large Tooling**

- Inside Diameter – 76mm
- Outside Diameter – 88.8mm
- Length – 100cm

**XRF** – Innovex DELTA portable handheld XRF

**Survey GPS** – Ashtech PROMARK 100 GPS

**Field Handheld Device** – Aceca Meazura MEZ1500 Data logger / barcode scanner

**Data Processing** – Laptop computer with proprietary ‘Truthware’ software for synchronous download of handheld / GPS / photos / XRF data

**Satellite Internet** – Portable Satellite Internet for nightly data downloads.

## **B. GT Probe Standard Operating Procedure:**

### **Overview**

This document outlines the standard operating procedures used to collect rock chip and soil samples which have been extracted by the GT Probe Bedrock Interface Sampler and analyzed by the field portable XRF. This describes the methodology behind the GT Probe Survey based on Yukon Projects conducted during the 2014 field season.

### **GT Probe Sampling :**

1. Planned line is brushed and picketed with sample locations at 5m intervals.
2. Sampling Technicians setup XRF sampling station midway on the planned line.
3. GT Probe operator drives machine to sample location at start of planned line.
4. Once GT Probe is in position and setup, the operator drives the first sampling rod to 90cm then extracts sample and discards.
5. Then a second sampling rod is put into the existing hole with an extension and is driven to bedrock interface (90cm – 450cm). GT Probe Operator then extracts sampling rod which contains bedrock interface sample and passes it onto the Sampling Assistant who takes it to the XRF station to be sampled.
6. Operator moves GT Probe to the next 5m sample location.
7. At the XRF sampling station the Technician uses a scraping tool remove the outermost layer of material from the cut out in the sampling rod. The purpose of this is to eliminate the possibility of cross contamination by smearing dirt while extracting the rod.
8. Technician empties sample from the sampling rod into the top tray on the custom core box, making sure to empty it in a way that the depth from where the sample was taken from, matches up with the same depth indicated on the measuring tape that he lays across the core box (cm).
9. Technician places sample ID barcode tag and colour card alongside the contents of extracted material in core box and takes a photo of bedrock interface profile.
10. A representative rock chip is taken out of the bottom section of the sample (bedrock interface) and XRF analyzed. This rock chip is stored in a chip tray.
11. Technician stacks a 4 mesh sieve on top of an 80 mesh sieve with a plastic tray underneath and empties selected sample material into coarse 4 mesh sieve. Shakes sieves until large rocks remain in 4 mesh sieve, fine rocks remain in 80 mesh sieve and all soil remains in plastic tray.
12. 4 mesh and 80 mesh rocks from sieves are washed lightly and placed on photo tray with sample ID barcode and colour card and photo is taken.
13. All rocks in the 4 mesh and 80 mesh sieves are put into small ore bag with sample ID barcode and ready for lab analysis.
14. Soil is collected from plastic tray and put into 40gram bag with sample ID barcode number written on bag and XRF analyzed. Sample is held for retention.
15. Soil remaining in plastic tray is placed on photo tray with sample ID barcode and colour card and photo is taken.

16. Technician places soil into Kraft bag (soil envelope) with sample ID barcode written on bag. Sample is held for retention.
17. Assistant returns sampling rod to GT Probe Operator and takes reading on Ashtech PROMARK 100 GPS of sampled location.

**Preparing samples for shipment**

1. Label two rice bags, one for rocks and one for soils, with the shipper, client, project code, number and type of samples (rock or soil).
2. Prepare QAQC samples so the ratio of 25 samples to one QAQC sample is maintained. This means that for each man day bag of rocks and soils there will be a QAQC sample included. Alternate between standards and blanks daily (assuming production will equal ~ 25 holes/day)
3. Zip rice bag closed with red security tag and record number with the date samples were collected in Excel spreadsheet.

**C. Data Processing :**

Data is downloaded and sent to GroundTruth Headquarters nightly and a USB stick is loaded for backup.

---

## **Resistivity & Induced Polarization Standard Operating Procedure**

### **1.0 Overview**

This document contains the standard operating procedure utilized by GroundTruth Exploration for completing the 2014 High Resolution DC Resistivity/IP Survey on the KSD property of the Dawson Mining District, YT.

The Multi-electrode, high resolution, shallow resistivity/IP system consists of a computerized meter (SuperSting) that controls the measurement geometry and timing, and stores the incoming Resistivity and Induced Polarization data. This meter is connected to passive geophysical cables equipped with 168 electrode take outs, which are in-turn connected to 168 electrodes embedded up to 50cm into the ground at 5m intervals for a total line length of 835m. This tight electrode spacing results in 2.5m horizontal resolution, while the overall line length gives us reliable readings down to a depth of 170m.

### **2.0 Personnel**

A team of 5 people is employed to run the survey:

- 1x Lead Geophysical Operator and Crew Chief
- 1x Secondary Lead and GPS Technician
- 3x Geo Technician

### **3.0 Field Equipment**

- 1 Supersting R8/IP meter
- 2 Switch Boxes
- 2 420m switchbox-meter cables
- 2 2m switchbox-meter cables
- 2 Power packs
- 2 100W Honda Generators
- 400 Electrodes
- 12 Passive 14 electrode Cables
- 2 Ashtech PROMARK 100 DGPS units
- 4 Frame packs
- 5 Garmin GPS units

- 5 iCom hand-held radios
- 4 Hasqvarna 335 chainsaws with maintenance kits
- 1 Field Laptop
- 1 EarthImager Software Dongle
- 1 ATV
- 1 Truck

## 4.0 Field Operation

- A crew of 5 is utilized to run the survey.
- The midpoint of a traverse is located and the line is sighted-in using a DGPS.
- Crew places electrode at 5m spacing with measuring tape
- Electrodes are hammered to a depth of 50cm (10% of electrode spacing)
- Cables are laid and attached to the electrodes
- Contact resistance test is conducted
- Calcium Chloride (25% solution) is added to all electrodes >2k ohms. CRT reread.
- Extra electrodes added to high CR electrodes. CRT reread.
- With satisfactory Contact Resistance, Survey is Read.
- Operator surveys the traverse using DGPS and marks the traverse with pickets every 50m.
- Crew prepares the next line.

## 5.0 Data Processing

In addition to real time quality control of all measurements, collected data is downloaded in the field after every array and checked for integrity. This allows any field errors to be identified before moving the equipment. The RES/IP data is processed daily by the lead operator using EarthImager2D software provided by Advanced Geosciences Inc. Resistivity data-misfits are removed and the cleaned data-set is inverted. The same process is done with the IP data. Terrain corrections are applied to the inversions using previously collected DGPS data. The DGPS data is processed using GNSS Solutions software. A .csv is created containing the DGPS traverse points collected. All instrument raw data from the DGPS and SuperSting are archived.

An ESRI shape file is created containing the traverse points collected.

All inverted sections are imported into Geosoft software, and organized in a georeferenced 3D database (ie with xyz coordinate information). This database is gridded into voxels (3D Grid) for both resistivity and IP. A voxel is a 3D equivalent of a 2D

To remove edge effect artifacts created during the gridding process, the voxels are clipped to surface using a DEM generated from the DGPS data collected on site.

Vertical Section grids (.grd) are then generated from the voxel along each profile read in the field. Horizontal section grids (.grd) are sliced from the voxel at 25m intervals between the elevations of 1450m and 1575m.

When relating sections extracted from geosoft voxels to 2D sections obtained from AGI Earthimager 2D inversion, the following information needs to be considered:

In Earthimager, merged and inverted 2D data for each traverse is individually scaled. This enables maximum contrast and detail within each profile, however care must be taken when comparing sections across different lines, as the colour scales may differ.

Voxels created using Geosoft, as well as the horizontal and vertical grids derived from them, are gridded and displayed using an equalized colour ramp, and the derived sections are therefore comparable for different lines or sections.

## High Resolution Imagery/Elevation Fixed-Wing 'XCam' Protocol:

The XCam survey lines and spatial resolution are approved by client prior to survey. Standard spatial resolution is set between 5 and 30cm/pixel. Flight time is dependent upon the size of the target area: ranging from 30 to 300 minutes and 50 to 300 square kilometers. The operator plans accordingly with available time on ground, the nearest landing strip, and local elevation, to determine the number of flights possible per day.

### 1. Personnel and Equipment

The XCam survey is typically conducted by one trained pilot and one operator. The lead operator is responsible for coordinating efficient operation of survey and ensuring optimal data quality, the pilot is responsible for ensuring steady level flight.

The following equipment is used for the completion of the survey:

XCam Pod:	XCam Pod with external GPS and two internal cameras Mount to attach pod to wing strut
Interface:	Microsoft Surface Pro 3
Power Generation:	100watt inverter (for battery and tablet charging) 2 external batteries for the pod
GPS units:	2x Promark3 GPS receivers (if GCPs are collected)
Processing:	Computer with adequate RAM
Software:	WaldoAir mission planning Pix4D Mapper Pro for image Orthorectification

## 2. Operating Procedure

The survey is completed in the field according to the following procedure:

- Survey is planned using WaldoAir software prior to departing for field.
- Spatial resolution, footprint, number of planned flights and launch location is determined.
- Operator arrives at airstrip and sets up XCam pod.
- Prior to launch, operator runs simulation to double check camera, camera settings, and field of view for pod.
- Pilot flies aircraft and flies survey as planned with number of required flights.
- Data is downloaded from tablet after each flight and inspected for quality.
- After survey, all imagery and drone data files are Orthorectified using Pix4D Mapper Pro software package.

## 3. Data Processing

The collected data is reviewed and downloaded in the air mid-flight and checked for integrity. This allows any low quality imagery to be identified and resurveyed while airborne. The imagery data is processed every evening by the lead operator in the field using Pix4D Mapper Pro software provided by Pix4D. The initial orthorectified image product is generated by an automated process. This image is then cleaned up manually within the Pix4D software by visually checking for low quality portions of the image and selecting another overlapping image for that location. The final cleaned image and DEM product is the result of this manual QC process. The final Image and DEM are georeferenced to NAD83 UTM projection. A final QC report is generated automatically with the final cleaned product.

### Standard data output:

Imagery:	Georeferenced Orthoimage (.ecw format)
Digital Elevation Model:	Gridded Elevation model (.grd format)
Automated Quality Report:	Report with survey statistics (.pdf format)

## **GT RAB Drill Standard Operating Procedures**

This standard operating procedure on GT RAB drilling comprises the requirements that should be carried out during ALL drilling activity. This SOP is intended to ensure the health, safety, and well being of all drill-site personnel. The Lead Driller / Foreman and crew will perform the services in accordance with the site-specific safety and emergency response plans (ERP).

### **GT RAB Drill Overview:**

The GT RAB Drill is a light weight rotary percussion drill rig mounted on a set of rubber tracks. The drill itself is powered by a 44.2 hp turbo charged Kubota diesel engine. It has a hydraulically operated tilting mast capable of drilling angles from 55 – 90 degrees and uses 1.5m drill rods. There are 4 hydraulically operated vertical outriggers on the drill for self leveling on drill sites. The GT RAB Drill is also equipped with a wireless remote control system used to drive it between drill sites. The rubber tracked platform on the GT RAB Drill has 2400sq inches of track coverage area giving it 1.8psi ground pressure allowing it to be extremely versatile and low impact in the field. The GT RAB Drill is a grassroots exploration drill rig that involves the use of DTH rotary percussion drilling equipment using compressed air from a stationary air compressor which is connected to the drill using air hose. The drill uses a pneumatic reciprocating piston driven ‘hammer’ to energetically drive a drill bit into the rock. The drill bit, which is tungsten carbide tipped, is inserted into the end of the hammer which is then threaded to the end of a drill rod string. Compressed air is fed through the drill rod string to the DTH hammer and with rotation from the top drive; cuttings are then returned to the surface through the annulus under pressurized exhaust air. Cuttings then pass through the diverter/BOP and continue to the cyclone and are collected in the 20L container at the bottom of the cyclone. The cuttings are then put through an 8:1 splitter and split, the homogenous sample is then logged and chips inserted into a chip tray indicating depth.

### **100m GT RAB Drill Setup:**

The GT RAB Drill can drill up to 100m / 12-hour shift (ground conditions dependent) sampled at 1.5m intervals using a stationary air compressor with layflat hoses giving the GT RAB Drill a 500m radius around the compressor to drill without the need of helicopter support.

### **Sling Load Breakdown (Astar Helicopter):**

- 2 sling loads – GT RAB Drill (1800 lbs each)
- 2 sling loads – Drill Rods (1800 lbs each)
- 1 sling load – 300 / 200 Air Compressor (2000 lbs)
- 1 sling load – layflat air hose, sampling gear etc... (1800 lbs)
- 1 sling load – Ironhorse Tracked Carrier, tools etc... (1600 lbs)

**GT RAB Drill Technical Specifications:**

<ul style="list-style-type: none"> <li>• Length – 96”</li> <li>• Width – 50”</li> <li>• Height – 70”</li> <li>• Feed Stroke – 84”</li> <li>• Pull Down – 8250 lbs</li> <li>• Pull Back – 16,200 lbs</li> <li>• 44.2 hp @ 3000 rpm</li> <li>• Hydraulic System – 3000psi @ 20gpm</li> <li>• Top drive assembly /w floating spindle</li> </ul>	<ul style="list-style-type: none"> <li>• Rotational Torque – 1500 lbs/ft</li> <li>• Wireless driving capability</li> <li>• 1.8 psi ground pressure</li> <li>• GVW – 3600 lbs</li> <li>• Breakdown Weights: <ul style="list-style-type: none"> <li>Mast – 890 lbs</li> <li>Sub Frame – 1390 lbs</li> <li>Tracks – 1020 lbs</li> </ul> </li> </ul>

## **Personal Protective Equipment (PPE)**

Workers should be familiar with the appropriate Materials Safety Data Sheets (MSDSs) and follow the specific instructions for PPE, storage, handling, first aid, spill response and disposal specifications. Jurisdictional regulations require that workers have access to MSDS's. In addition to electronic copies, it is advisable to keep paper copies of MSDSs in a binder where products are stored and in a central location (e.g., drill shack or drill truck).

Workers should read the MSDS before handling a product for the first time, as they contain information about PPE, safe handling and storage, first aid and more. Should exposure occur and medical treatment is required, take a copy of the MSDS sheet to the hospital so the medical personnel know what product is involved. Correct treatment can begin sooner. Employees must know that hazardous substances can enter the body through:

- Breathing (inhalation)
- Contact with skin or eyes
- Swallowing (ingestion)
- Direct contact through injection (e.g., compressed air or hydraulic pinhole leaks)

All GT RAB Drill crew must use safety hats, safety glasses, safety footwear, dust masks and hearing protection during drilling.

All personnel within 30 metres of the drill setup must wear safety hats, safety glasses, safety footwear, dust masks and hearing protection.

Where required, additional PPE will be used (e.g. gloves, dust masks, protective clothing, etc.).

## **Communication**

- A regular communication schedule between the drill site and base station / camp will be established. A satellite phone must be on site with the drill.
- All GT RAB Drill crew must be instructed in the use of communications equipment, i.e Radio's and sat phones.
- Communication procedures including radio frequency(s) and or telephone numbers are to be displayed in a prominent place.

## **Emergency Response Plan (ERP):**

- All drill operations will have a site specific ERP to be outlined by the Project Manager and GT RAB Drill Crew.
- ERP procedures must be posted close to all communication hardware.
- Emergency shelter suitably equipped for the climatic conditions will be in place at drill site.
- Appropriate emergency equipment, including emergency communication equipment, will be kept at all drill sites.

### **Site Preparation:**

During site preparation, safer working and camp conditions, efficient drilling operating and crew satisfaction and comfort should all be taken into consideration. The site may be located by a peg marked stake, flagging or marks on the ground or trees, GPS location, or be sighted in by onsite Geologist. Angled holes may also be defined by pegs giving hole azimuth, statement of compass azimuth, statement of dip at collar, or be sighted in Lead Driller, Foreman or onsite Geologist.

### **Setting up safely:**

Of all the tasks a driller performs, the most hazardous is setting up the rig. Accident records show more injuries from resulting in carelessness during this activity than from any other. The following are things that could lead to accidents:

- Excessive loads on crew or machine, loads incorrectly carried.
- Loose equipment or tools in mast.
- Careless approach to job.
- Fuels and other flammable materials.
- Incorrectly loads vehicles or helicopters.
- Lack of first aid equipment and knowledge.

### **Safe Drill Moves:**

Carry out a risk assessment of the route and site before all drill moves. Mitigate the risks as much as possible through careful planning, good communication and following SOPs. Look at weather, slopes and wind directions before deciding on placing the rig for locating drill rod racks, compressor and fuel storage areas.

### **Risks and hazards**

Equipment damage or loss caused by:

- Contact with overhead hazards (power lines, tree branches, canopies of service stations)
- Overturning or becoming stuck due to steep terrain, soft, rough or unstable ground
- Breaking through ice
- Impact injuries caused by unsecured equipment
- Slinging accidents caused by poor planning, marginal weather conditions, poor ground conditions, lack of training, lack of or poor communication between ground staff and pilot, pilot fatigue, forceful clients or contractors who push pilots to complete the job

### **Preparation and prevention**

Preparation and planning are important before all drill moves.

- Verify that the location is adequate (e.g., slope, clearance, free of obstructions and dangerous branches).
- Complete site preparations before the move commences. This includes planning the site layout for clear escape routes from all areas, locating sample viewing areas that are clear of operating machinery, cyclones and high pressure hoses. Minimize land disturbance as little as possible, remove tripping hazards.

- An emergency response spill kit will be kept at each drill site, and all stationary equipment will be contained in fuel berms.

### **For all moves:**

- Carry out an inspection to make sure the drill rig and transporting conveyance, including skids, are in good condition to accomplish the move. Verify the brakes are in good working order before all moves.
- Know the overhead clearance, width, length and weight of the drill rig and conveyance.
- Never move the drill with the mast in the raised or partially raised position.
- Secure and check all loads.
- Use a spotter to assist when lateral or overhead clearance is close and when it is necessary to back up, check for power lines or when it is advisable to stop traffic.
- Remove ignition keys when the equipment is unattended. Set all brakes and locks when the move is completed.
- No passengers may ride on the drill rig.
- When possible travel directly uphill or downhill. Use caution when traversing slopes as any added weight (e.g., tools) may raise the centre of gravity and cause it to tip more easily. Avoid traversing slopes that are slippery or rough.

### **Helicopter assisted drill moves (slinging)**

- Slinging drills between drilling locations is common practice where access is limited. Slinging requires specially trained pilots, trained ground personnel and clear communication between all personnel regarding the task at hand.
- Proper hand signals must be used
- Ensure that ALL sling gear is in perfect working order
- Proper PPE and high visible clothing must be worn at all times.

## **GT RAB Drill Risks and Safety Protocol:**

This is defined as any device engineered to prevent injury to people or damage to equipment and the environment. Examples include high-pressure hose whip-checks, safety relief valves on all pressurized vessels, guards on all moving parts, emergency shut offs and lockout capability. This section highlights common risks and hazards associated with drill sites and focuses on safe work procedures and strategies to prevent accidents.

### **Risks related to high pressure air and hydraulic systems:**

- Explosion and fire caused by misting of hydraulic fluids from pin hole leaks contacting an open flame (e.g., a drill shack heater or onto hot engine parts), malfunctions of booster compressors, tiger torches
- Impact injuries caused by hose failures, hose coupling failures, material ejected from cyclones, when sample discharge hoses fail and spray rock chips
- Eye damage due to grit and dust getting into eyes when sampling or cleaning machinery with compressed air

- Tissue damage or embolism caused by high pressure hydraulic fluids piercing the skin from a pin hole leak in a hydraulic hose or when cleaning clothing with high pressure air
- Hearing loss caused by high noise level of operating machinery while wearing inadequate hearing protection
- Injuries caused by the discharge from pressure relief valves when there are inadequate extensions

### **Compressed Air Systems:**

Compressed air is used as the circulation medium for reverse circulation (RC), rotary air blast (RAB) and rotary percussion drilling. Failure of a high pressure hose or hose coupling may cause the hose to break away with explosive force and thrash about; a sample discharge hose that fails may eject rock chips. The impact from any of these may result in serious injury or death. Because of the complexity of compressed air systems, GroundTruth Exploration relies on maintenance and inspection procedures to manage the risks and hazards of compressed air systems.

Establish an exclusion zone around all compressors and high pressure air hoses. Train all employees to understand the destructive capability of breakaway high pressure air line hoses.

- Compressors discharge compressed air intermittently and whenever a compressor shuts down. Surface dust or gravel may be blown up from the ground. Stay away as you won't know when this may occur.
- All air compressors must be equipped with a fully operational pressure relief valve. All air hoses must be fitted with safety chains or whip checks at both ends.
- Never direct compressed air toward the body or use it to clean clothing. If air is forced through the skin, air bubbles may enter the blood and cause an embolism, which can be life-threatening.
- Hoses should have no twists, kinks or bends.
- Each hose should be the correct length – long enough to flex, but not too long.
- Do not place hoses under tension.
- Do not permit hoses to rub or abrade against other objects. Use wraps (snakeskin) on hoses in high wear areas, including where subject to vibration wear.
- Do not drive over pressurized hoses.

To prevent hose failure:

- Always check that hydraulic hoses and couplings are correctly installed. To be safe, hoses, clamps and couplings must match and lock completely into the stem groove as shown below. The coupling assembly should never contain mismatched parts. Company personnel should be able to identify incorrectly fitted hose couplings. They should observe hose couplings and hose conditions during their work operations as part of proactive safety behaviour.
- Do not hold a discharge hose or place your feet near them. A coiled hose may suddenly whip out of control and the impact can cause serious or fatal injuries.
- Whip checks: Always make sure whip checks, safety chains or restraints are securely attached to each end of high pressure hoses.

### **Slips, trips and falls may be caused by:**

- Uneven ground, stumps, rocks, wet, icy ground or surfaces on the drill platform or drill shack steps, unsecured or improper rise and run on steps
- Stepping in spilled drilling muds or additives, sumps, holes

- Inadequate footwear
- Lack of, wrong type, or inadequate use of fall protection equipment
- Working near cliffs or on benches
- Improper illumination and/or inadequate lighting around the drill shack at night, poor housekeeping

#### **Other risks:**

- Accidents during drill set up, drill moves or tear down (e.g., drill platform collapse, drill tower erection, especially during helicopter set ups)
- Hypothermia caused by wearing inadequate clothing for the weather, wind chill, lack of warm-up breaks
- Hyperthermia and/or sunburn caused by working in sun or heat, wearing inadequate clothing, lack of cooling breaks, inadequate fluid intake (dehydration)
- Drowning or cold water immersion hypothermia caused by falling through ice or breakthrough with equipment
- Electrocuting, fire explosion caused by contact with underground gas lines, cables, utilities, or overhead power lines
- Burns caused by contact with hot engine parts, being sprayed by hydraulic fluids, fires
- Injury or death caused by being hit by falling dead trees (chicots), hung-up trees and snags left after pad preparation
- ATV and snowmobile crashes caused by excessive speed, improper riding procedures
- Bear invasion caused by the presence of garbage and rod grease
- Exposure to toxic substances caused by:
- Lack of, inadequate or malfunctioning PPE

#### **Reporting:**

- Immediately report injuries, accidents, incidents, near misses, unsafe conditions and any serious safety concerns to the supervisor.
- Report all accidents or incidents to the Project Foreman / GroundTruth Exploration and/or company site representative within 24 hours.
- Investigate all accidents and incidents promptly. Immediately implement new SOPs that arise from an investigation of any injury or safety incident to prevent recurrence. The drilling operation must not recommence until the site and/or equipment is made safe.

#### **Worksite Cleanliness:**

Drill crews must keep the drill site neat, organized and free of debris as an important ongoing part of a drilling program. An orderly site improves working conditions and reduces the risk of trips, slips, falls, sprains, cuts and more serious injuries.

- Organize the drill site to allow sufficient space for easy access to drilling supplies. Use designated areas for unloading equipment and supplies. Store them in designated convenient places where they will not become a hazard and cause injuries.
- Use proper signage in the appropriate places.
- Storage: Use suitable racks for storing drill rods, casing, and tools that prevent them from sliding, rolling or falling off. Store drilling additives, fuels and oils according to regulations and in ways that prevent harm to employees and the environment.

- Keep access ways and passages within the site tidy and free of personal items and equipment. Keep them free of grease, oil, ice, mud and other slipping and tripping hazards. Keep work areas and passageways well lit, especially at night.
- Keep areas near emergency equipment clear at all times (e.g., fire extinguishers, hoses and emergency PPE).
- Keep the drill mast free of loose objects at all times.
- Clean and return tools and equipment to their proper storage space. Tools left lying around create a tripping hazard and get damaged or lost.
- Roll up hoses, cables, slings and extension cords and other items that may cause tripping hazards after use. Store them correctly. Replace worn or damaged hoses and cords.
- Remove garbage from the drill site regularly (each shift).
- Immediately clean up any leaks and spills according to regulations and company environmental guidelines. Understand and follow the regulations regarding reportable spills. Keep appropriate spill containment kits at appropriate places. Immediately cover over a spill area with a non-slip material to prevent slips and falls.

### **Lightning:**

When a lightning storm threatens, shut the drill / compressor down and move all personnel to a safe location because the drill mast may act as a lightning rod. Lower the drill mast if time permits.

### **Compressor Hoses and GT RAB Drill:**

- These devices will be fitted in accordance with industry.
- High pressure air hoses must be equipped with the appropriate certified ‘whipchecks’
- Correctly installed high-pressure hose clamps and couplings must be inspected daily.
- Correctly installed whip-checks. “Cable–Stocking” whip-checks are required at both ends of airline hoses identified at risk. Required strength of cable-stockings will vary according to hose diameter and operating pressure.
- All couplings, hoses and other safety devices must be selected for their intended duty, installed properly, regularly inspected for signs of wear and replaced as necessary.

### **Fire Protection and Prevention:**

- Prior to the commencement of any drilling operation, an analysis of all potential fire risks must be undertaken and management procedures implemented.
- All drill sites must have the appropriate equipment and procedures in place to deal with identified risks.
- All drill and associated personnel must receive training to deal with these risks.
- A minimum of one fire extinguisher must be kept at the GT RAB drill site.
- A minimum of one fire extinguisher must be kept at the heli portable compressor site.
- Store and label all flammable and/or hazardous materials appropriately.

### **Fuel Handling:**

- All fuel containers must be clearly labelled indicating fuel type.
- Hand or power pumps must be used to transfer fuel.
- Eye protection and gloves must be worn whenever pouring fuel.
- Smoking is not permitted near fuel storage areas or near where fuel is being transferred.
  
- Initiate steps to contain possible spills prior to commencement of fuel transfer.
- An emergency response spill kit will be kept at refuelling site.
- All fuels must be contained within fuel berms.
- A minimum of one fire extinguisher must be kept at the Fuel Site

### **First Aid:**

- First Aid kit and supplies appropriate for the location and number of personnel will be located at all drill sites. All drill personnel must know the location of all first aid equipment.
- Contents of first aid kits must be checked regularly and the contents kept fully stocked with in date supplies (it is recommended that you keep a daily record of all drugs and supplies used).
- An eyewash bottle must be located at all drill sites. The bottle must be mounted in a conspicuous location and ready for immediate use.
- All injuries requiring any first aid treatment must be reported.

## **Overview of Operating Procedures**

### **Drill Setup:**

1. Before heading to any job, the Lead Driller must perform a tailgate Safety Meeting.
2. Site identification and inspection.
  - Slope and terrain.
  - Tripping hazards.
  - Wind direction
3. The Lead Driller drives the GT RAB Drill onto site location using wireless remote control pulling one rod rack. The rod rack is then placed in a location nearby for easy access to drill rods. The Lead Driller then sets up the drill at the proposed drill collar location. Azimuth and dip are set up by Lead Driller and/or onsite Geologist.
4. While GT RAB Drill is being set up, the Drill Assistant moves drill rods, hand tools and sampling gear onto site by means of IronHorse Tracked Carrier. Drill rod basket is then placed in proper location indicated by Lead Driller for easy access.
5. Drill Assistant and Sampling Technician then lay out compressor hoses from compressor to GT RAB Drill ensuring that all connections are tight using club hammers and have the appropriate 'whipchecks' in place. Driller Assistant ensures that fuel supply for compressor is full for a 12 hour shift. (Capacity 205 L). Once in place and attached to air inlet at drill and inspected by Lead

Driller, the Drill Assistant will then start the compressor and begin the warmup procedure as indicated in operation manual.

6. Starting Compressor: See Operation Manual for NCA 8-14 GSD – H2 Compressor.
7. Sampling Technician sets up cyclone to receive discharge hose from diverter/BOP. He/she also sets up 8:1 splitter and ensures both are clean to eliminate cross contamination between holes.
8. Sampling Technician then prepares 8:1 splitter with 12 x 20 assay bag and retention bag in preparation of receiving sample. Assay and reject bags must be in place on splitter before receiving next sample.
9. Sampling Technician sets up sampling station within 10m of drill operation, preparing chip trays, sample bags, rice bags and ID tags for incoming samples.
10. Once GT RAB Drill is fully set up and in position ready for drilling, the Driller Assistant ensures fuel tank for drill is full. Then the Lead Driller and Driller Assistant prepare lead casing and casing advancement system and load onto drill mast. They attach the diverter/BOP and discharge hose to cyclone ensuring all 'whipchecks' are in place. Lead Driller starts drilling to set casing. Driller Assistant ensures that there is a sample bucket at discharge end of cyclone to receive sample.
11. At every 1.5m interval the Driller Assistant will replace the full sample bucket from the discharge of the cyclone with a clean, empty bucket. The Sampling Technician will then take full sample bucket to splitter and pour it through the splitter, splitting the sample.
12. Between drilling intervals, the Driller Assistant prepares next rod and casing and assists in breaking drill string and tripping in new drill rod/casing and/or assisting where needed and instructed by Lead Driller.
13. Lead Driller drills casing in 1.5m intervals until bedrock is reached or he/she feels that competent ground has been achieved.
14. Once casing is seated into bedrock or competent ground the Lead Driller and Driller Assistant trip out casing advancement hammer and trip in open hole hammer to continue to drill to depth.
15. Repeat until depth of hole is achieved or to the end of the shift.

## Sampling Technician Operating Procedures:

16. Retention Sample (non analytical, 7/8 of sample) is received from splitter into a large ore bag. Sample ID, Hole ID and Interval written on plastic Sample ID tag with marker and sealed with zip tie (after chip tray and XRF representative samples are extracted-see below) . Sample ID tag attached through zip tie seal.
17. Analytical Sample (1/8 of sample) is received into 12x20 ore bag. One Sample ID Barcode tag is inserted into bag as backup ID tag. Bag is sealed with zip tie with external barcode Sample ID attached.
18. Buckets and Splitter are cleaned with pressurized air after each sample.
19. Representative Chip Tray sample is collected from Retention sample bag by spearing 2” PVC pipe with cutaway into center of retention sample. Chip tray sample is strained to remove fines and washed in bucket of water prior to placement in chip tray. Hole ID, Location, Azimuth, Dip and date are marked on lid of chip tray. Sample ID and Interval are marked on inside of lid above each sample.
20. Representative XRF sample is collected from Retention sample by spearing. No fines are removed. XRF sample is bagged into 2” x 2” clear plastic ziploc bag with Sample ID and Interval marked on bag.
21. Sampling Technician logs sample ID and interval information on Acceca® handheld device equipped with barcode scanner. Sample IDs are always scanned into device to initialize log entry.
22. Analytical sample is placed into rice bag with client, Project code, Bag Series and number of samples written in marker on bag. 10 samples per bag then rice bag.
23. Receive next sample.
24. This continues until hole depth is achieved.
25. Lead Driller or Driller Assistant must log the following throughout drill shift (see attached Drill Log Form)
  - Hole ID, Lead Driller, Driller Assistant and Sampling Technician name.
  - Drilled casing depth
  - Shift meterage drilled
  - Hole characteristics i.e water, loss of circulation, and/or cuttings
26. The Lead Driller must also perform and document an After Action Shift Summary.

---

## STANDARD OPERATING PROCEDURE

---

### 2016 RAB Drill Sampling

#### 1.0 Overview

Rotary Air Blast (RAB) drilling is a rotary percussion drilling technique which uses high-pressure compressed air to operate a pneumatic hammer, break rock and deliver rock cuttings (the sample) to the surface.

RAB drilling is widely used across the world as a cost effective and efficient method to explore and delineate regional targets in the subsurface.

This SOP outlines the protocol for sample collection, quality assurance, chain of custody, and logging of RAB drill hole samples collected by GroundTruth Exploration Inc.

## 2.0 Staffing and responsibility

RAB drill operations will comprise the following roles:

Position	Responsibility
GroundTruth Geologist	Provides drill hole location, dip and azimuth to Drill Crew. Oversees integrity of drilling/sampling protocols and sample data. Completes collar survey with differential DGPS. Processes and interprets incoming Televiwer and XRF data. Point of contact with Client.
Driller	Operates drill in safe manner in accordance with safety and environmental standards. Responsible for receiving direction from Geologist and ensuring correct positioning and orientation of the drill rig on the collar.
Drill Helper	Assists driller where required. Changes drill rods as required. Assist in Drill moves and operation of compressor. Assists in the setup and takedown of Televiwer downhole surveys.

Sampler	Responsible for RAB sampling according to SOP Protocols, Responsible for the recording of sample information in digital handheld device and uploading to database, prepares chip trays and XRF representative samples. Sampler is responsible for QAQC insertion and duplicate sampling at requested interval.
Camp Attendant	Designated first aid attendant on Project. Responsible for morning and evening meal preparation and maintenance of light camp. Assists in Televiewer surveys when possible.

### 3.0 Hazards

A number of hazards are recognized during RAB drilling:

- Respiratory – exposure to rock dust
- Compressed air – injuries caused by dust/sand blast
- Rotating parts – risk of entanglement
- Slip Hazards – injuries caused by slipping, tripping, falling
- Climate – temperature extremes, hypothermia, frostbite, frost nip
- Lifting – injuries caused by poor lifting techniques and lifting heavy samples on uneven surfaces

The RAB driller will ensure every person is familiar with the RAB equipment prior to the commencement of work. During this time the driller will clearly delineate additional hazards. The RAB driller is responsible for the safety of operating RAB rigs and sampling personnel should take direction as required.

All personnel should obtain permission from the driller prior to approaching the rig (e.g. eye contact and signal to approach).

No jewellery of any form (rings, watches, bracelets etc) is to be worn by anyone working on a drill rig. Jewellery is a safety risk and sample contamination risk.

### 4.0 Protective Equipment

The RAB drill will be fitted with the following equipment:

- Drill rod guards to prevent entanglement
- A clearly marked “emergency stop” button
- Fire extinguishers

Personal Protective Equipment (PPE) is required for all personnel working or visiting within 10m (30 feet) of a RAB drill. Minimum PPE requirements are:

- CSA approved Hard Hat
- CSA approved safety footwear (e.g. steel or composite capped footwear)
- CSA approved Safety Glasses
- CSA approved hearing protection
- CSA approved dust masks/respirators
- Gloves (Drill helpers when handling rods)

## 5.0 Equipment / Supplies required

Equipment required comprises:

- Drill equipment (drill, cyclone, splitter etc.)
- Groundtruth Samsung S5 hand held data logger with Fulcrum and WellCAD software
- Sampling supplies
  - 12"x20" clear plastic sample bags for analytical sample
  - 2"x3" clear plastic bags for XRF sample
  - 20"x40" polywoven rice bags (blank)
  - Barcoded sample tag book
  - Appropriate standards / CRM (certified reference material)

Standard ID	Description
Standard 1	CDN-GS-1K
Standard 2	CDN-ME-1205
Blank	Coarse Blank

- Chip trays
- Chip tray funnels
- At least 2 sieves (one wet, one dry)
- Permanent markers (sharpies)
- 12" zip ties
- Sampling bucket for collection of sample from cyclone marked at 20%, 40%, 60%, 80%, and 100% of the usual recovery of a rod
- Rubbermaid bin for collection of bulk sample from splitter
- Sampling spear (2 inch PVC pipe cut at an angle)
- Buckets for washing chips
- 20 litre water jug
- GPS
- Inclinometer

## 6.0 Prior to drilling

Prior to drilling the sampler will be given sufficient sample tag books by the geologist. The geologist will remove sample numbers ending with 10, 20, 40, 50, 70, 80, and 00 for later insertion of standards and blanks. These sample tags will be kept at the onsite office.

The Sequence of Standard/Blank/Duplicate insertion will be:

10	Standard 1
20	Blank
30	<b>Duplicate</b>
40	Standard 2
50	Blank
60	<b>Duplicate</b>
70	Standard 1
80	Blank
90	<b>Duplicate</b>
00	Standard 2

## 7.0 Site preparation

### 7.1 Drill rig location and alignment

Prior to commencement of drilling a geologist should check to ensure that the drill rig is located over the correct collar peg. The drill hole azimuth should be checked by aligning the drill rig frame or mast with the front and rear sight pegs which will be positioned in advance. It is important that the azimuth is checked against the hole number as holes may be drilled at differing azimuths. Prior to collaring the drill hole a geologist should also check to ensure that the correct dip (inclination) has been selected by the driller. Dips may vary.

### 7.2 Before drilling

The following activities should be done to prepare for drilling:

- 1) Assess the drill site for any hazards (slips, trips, stumps, etc.) and remedy where necessary.
- 2) Ensure working areas are clean and tidy
- 3) Set up sampling station
- 4) Write up chip trays:
  - The hole number and the corresponding depths of stored drill chips should be written on the top lid and on end of each chip tray

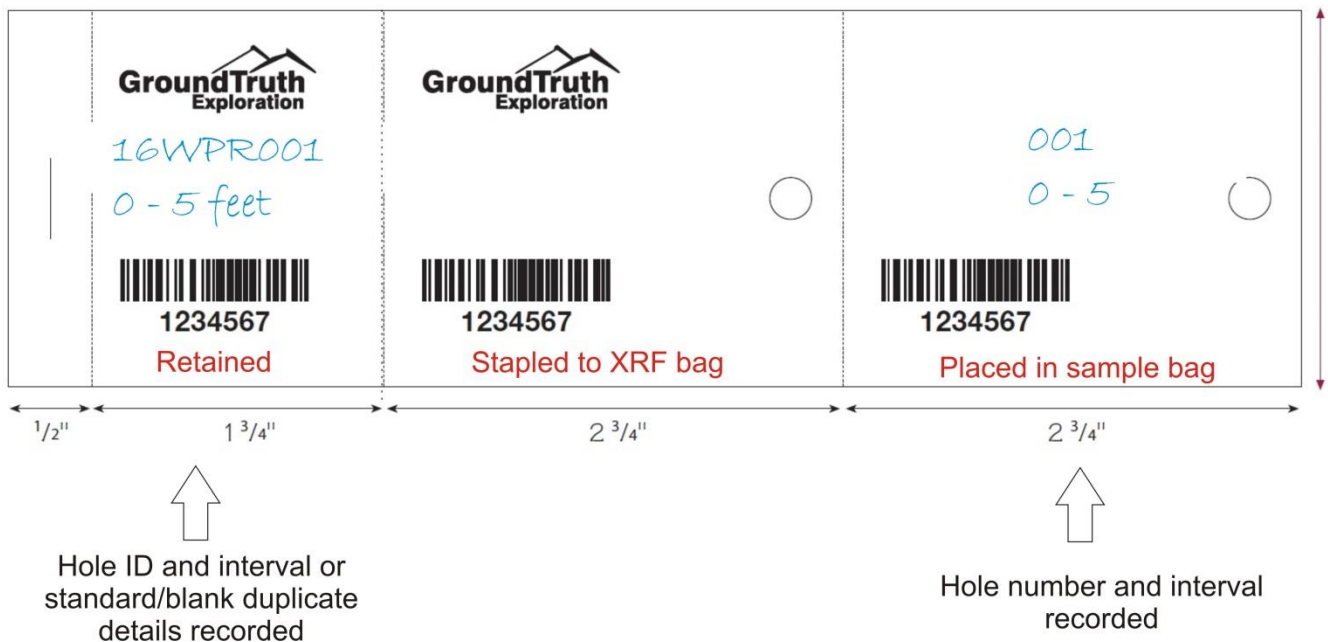

- The sample intervals should be written on the inside lid for each sampled interval. RAB sampling is completed as a composite of each 5 foot drill rod. Chip trays should be written to correspond to 5 foot increments equal to each length of drill rod (0-5, 5-10 etc).

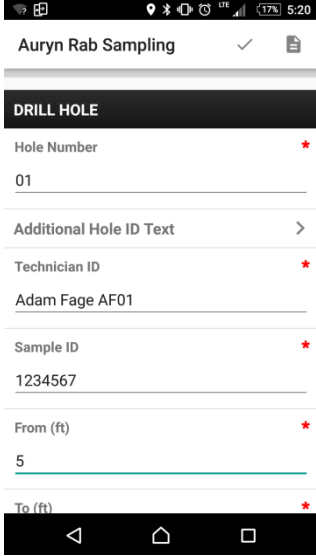

5) Prepare sample tag book

- The outside tag should have the 3 digit numbers of the Hole ID and sample interval written on it. This tag goes into the sample bag.
- The second tag is to be attached to the xrf sample with an office stapler.
- The third tag should have the Hole ID and details of the sample (sample interval, duplicate and corresponding interval, standard details, or blank details) and is retained for future reference.

- 6) Rice bags should be prepared and labelled. Ten samples should be included in each rice bag in sequential order. Rice bags should be labelled sequentially.
- 7) Write 12"x20" clear plastic sample bags. These should correspond with the sample book.
- 8) The GroundTruth RAB hole form on the data logger should be filled in at this time. Required information includes:

- Hole Location
- Characteristics – start date, time, azimuth, dip, before photo

The screenshot shows a mobile application interface for 'Auryn Rab Sampling'. The form is titled 'DRILL HOLE' and contains the following fields:

- Hole Number: 01
- Additional Hole ID Text: (empty)
- Technician ID: Adam Fage AF01
- Sample ID: 1234567
- From (ft): 5
- To (ft): (empty)

Each field has a red asterisk indicating it is a required field. The form is displayed on a mobile device with a status bar at the top showing the time as 5:20 and a battery level of 17%.

## 8.0 Sampling process (at drill site)

The sampler will sample drill cuttings every 5 feet corresponding to the length of individual drill rods. All sampling equipment (buckets, Rubbermaid bin, splitter, cyclone) should be clean prior to the commencement of drilling. The buckets, Rubbermaid bin and the splitter should be cleaned after each sample with compressed air. No sample residue should be left on sampling equipment between samples.

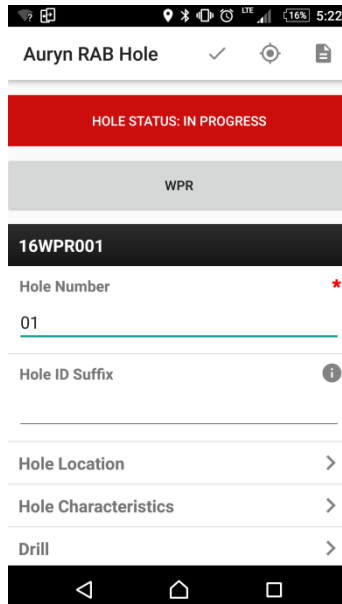

At this point all personnel should be wearing appropriate PPE. Jewellery must be removed before any sampling is undertaken.

### 8.1 Sampling process

Sampling should be completed as follows:

1. Place a clean sample bucket underneath the cyclone. A 24x36 poly bag is attached from the cyclone to the bucket and secured with a bungee cord to create a seal and prevent dust from escaping.
2. While drilling is occurring the Rubbermaid bin can be placed under the large opening of the sample splitter in preparation for sample splitting.
3. A 12"x20" clear plastic sample bag can also be attached to the small opening on the splitter for the analytical sample.

4. Upon completion of a drill rod the driller will stop the drill feed and ensure all sample reaches the cyclone and blow the hole clear.
5. The filled bucket is removed from the cyclone.
6. A clean, empty bucket will be placed on the cyclone ensuring a tight seal as directed by the driller following the rod change and blowing the hole clear. Drilling continues.
7. The completed sample bucket should be carried to the splitter. The recovery percentage will be recorded at this point, in increments of 20%. (Note: Sample buckets containing rock cuttings can be heavy. Sample helpers should always use proper lifting techniques and ensure good footing to avoid slips, falls and injury. Make sure to keep the drill site tidy and well organized to avoid injury!)
8. The sample should then be poured evenly through the riffles of the splitter. The pneumatic / electric vibrator should be used to ensure efficient splitting of the sample.
9. Once the sample has been completely split the 12"x20" clear plastic sample bag should be removed and the corresponding outer barcoded sample tag (with depth and last 3 digits of hole number written on tag) added to the bag. The bag should then be sealed with a zip tie.
10. At this point the Sample form in the data logger should be updated with sample details (Hole ID, appropriate interval) and the barcode of the sample scanned. This should be checked against the sample tags.

The screenshot shows a mobile application interface for 'Auryn RAB Hole'. At the top, there is a status bar with various icons and the time '5:22'. Below the title bar, there is a red banner with the text 'HOLE STATUS: IN PROGRESS'. Underneath, a grey banner displays 'WPR'. A black banner shows the identifier '16WPR001'. The form includes several input fields: 'Hole Number' with the value '01' and a red asterisk indicating a required field; 'Hole ID Suffix' with an information icon; 'Hole Location' with a right-pointing arrow; 'Hole Characteristics' with a right-pointing arrow; and 'Drill' with a right-pointing arrow. The bottom of the screen shows the standard Android navigation bar with back, home, and recent apps buttons.

11. The Rubbermaid bin which has collected the bulk sample from the large opening can then be removed for further work.

## **8.2 Duplicates**

12. If a duplicate sample is required the data logger will notify the sampler. In this instance another 12"x20" clear plastic sample bag should be attached to the small opening of the splitter and a second Rubbermaid bin placed under the large opening. The sample should be passed through the splitter to obtain a field duplicate. Once complete sample tags should be attached per step 9.

## **8.3 Chip tray and XRF sample**

13. Following the completion of each sample (and duplicate where required) the bulk sample from the Rubbermaid bin will be used to collect a representative sample for the chip tray and for XRF analysis.
14. A chip tray sample is collected by inserting the 50mm sampling spear through the Rubbermaid bin to collect the entire vertical distribution of the sample
15. This spear sample is then placed in the dry sieve and the fine material removed by shaking the sieve
16. Depending on the nature of the cuttings it may be necessary to have a second bucket of water to further clean drill cuttings. A separate wet sieve should be used for this process.
17. A representative sub sample should be collected from the washed chips and placed in the correct position (corresponding with the drill depth) in the chip tray.
18. A second sample should then be collected using the spear. This sample should not be sieved. A representative amount of this sample should be collected in a small zip lock bag for XRF analysis. The sample ID and drilling interval must be clearly marked on the bag.

## **8.4 Between samples (drill rods)**

Between samples the following should be completed

19. Once the analytical sample, duplicate sample, chip tray sample and XRF sample have been collected the remaining portion of the bulk sample can be discarded in a sump or natural depression.
20. All sampling equipment (buckets, Rubbermaid bins, splitter) should then be cleaned thoroughly using compressed air.
21. A new 12"x20" clear plastic sample bag should be affixed to the splitter ready for the next sample.

22. All analytical samples that have been collected and zip tied should be placed into rice bags (10 per bag).
23. At an interval of at least every 10 rods the cyclone should be inspected for the buildup of sample material. If material buildup is noted the cyclone should be scraped clean. The driller should be notified before any inspection or cleaning occurs.

## 9.0 End of hole

At the completion of each hole the following work should be completed:

1. The Hole Finished portion of the GroundTruth RAB hole form should be completed. This includes filling the following fields.
  - End of hole depth
  - Hole termination reason
  - Casing status
  - Completion time
2. All analytical samples should be packaged into 20"x40" polywoven rice bags. Approximately 10 samples should be included in each rice bag in sequential order.
3. The Hole ID should be written on each rice bag.
4. The rice bag should be sealed with a zip tie.
5. Coloured flagging should be added to the top of each rice bag. Colours should be specific to each hole and should alternate. This is to provide a quick way to identify samples from the same hole.
6. All rice bags should be cached for helicopter transport back to camp. This is usually done at the end of shift or when helicopter access is present. Where drill moves occur mid-shift samples should be dispatched to camp or nearest helipad.
7. Chip trays should be placed inside a separate 20"x40" polywoven rice bag(s).
8. XRF samples should be placed in a 12"x20" clear plastic sample bag and zip tied closed. The Hole ID should be written on this bag with a suitable marker pen.
9. A wooden peg should be positioned at the hole collar with the appropriate Hole ID written on the peg.

---

## 10.0 Geological Processing

### 10.1 XRF analysis

XRF analysis of each sample should be completed in accordance with the established **XRF Standard Operating Procedure**. XRF data will generally provide valuable information to assist with geological logging. The in camp assistant will be trained in the use of XRF and is tasked to complete the XRF analysis daily.

### 10.2 Optical Televiwer Surveys

Optical Televiwer downhole surveys will be conducted immediately upon the completion of each drilled hole while the casing is still in the drill hole. Optical Televiwer should be completed in accordance with the established **Optical Televiwer Standard Operating Procedure**. Optical Televiwer Surveys will be processed and Interpreted by a designated GroundTruth geologist in conjunction with XRF data on a daily basis using WellCAD software to provide current drillhole structural and geochemical interpretations to direct drill targeting decisions with the client.

### 10.3 Detailed Geological Logging

Detailed geological logging will be completed using chip tray samples (and XRF information where appropriate). Geological data will be captured using a Samsung Galaxy data logger equipped with WellCAD software. Logging will be completed in camp according to the following guidelines:

### 10.4 Insertion of standards and blanks

Standards and Blanks should be inserted on the designated sample numbers ending with 10, 20, 40, 50, 80, 90 and 00.

- i) The sticker should be removed from the standards and affixed to the inner sample tag. The standard ID will also be written on the inner barcoded sample tag.
- ii) The standard should be inserted into a 12"x20" clear plastic sample bag.
- iii) The outer sample tag (not labelled with standard ID) should then be inserted into the 12"x20" clear plastic sample bag.
- iv) Duplicates will be completed at the defined interval specified. Duplicate samples will be taken from the interval immediately preceding sample numbers ending with 0 (e.g. sample number 1234560 will be taken from the interval of sample 1234559). Duplicates should be recorded in the sample tag book prior to drilling to serve as a reminder to the sampler.

### 10.5 Preparation for sample dispatch

All samples should be packaged in 20"x40" polywoven rice bags.

The following should be completed in preparation for sample dispatch

1. An addressed 20"x40" polywoven rice bag should be pre labelled with shipment number, bag number and shipper details.

2. A maximum of ten samples should be included in each bag. Rice bags used to ship samples from the drill can be reused as the internal sample bag. The outer bag should be the bag labelled previously (9.6 step 1).
3. Rice bags will then be labelled with bag number and total number of bags in the sample submission (e.g. Bag 1 of 10, 2 of 10 etc.).
4. Each 12"x20" plastic sample bag should be scanned using the data logger and recorded against the appropriate rice bag number as it is inserted into the rice bag.

5. Prior to sealing the rice bags, the sample submittal form shall be placed within the first bag of the sample shipment.
6. Security tags should also be scanned for the corresponding bag. These rice bags should then be zip tied and sealed with the security tag. Note: the zip tie should pass through the security tag when sealing the rice bag so the security tag does not break during transport.
7. Each rice bag should then be labelled with the submission number. The submission number will be allocated sequentially and use the convention: YYQV-RAB-XXX (e.g. 16QV-RAB-001)
8. Completed sample submission shipments will be lined up in the sample dispatch area in sequential order and separated by hole. Each hole will be marked with a different colour combination of flagging tape wrapped around the top of the rice bag for easy identification for transport out of camp.

## **11.0 Sample shipping**

Completed sample shipments will be sent to GroundTruth HQ on outbound helicopter loads to Dawson when scheduled and at the completion of a drill program. The sample technician will log samples in each shipping rice bag in the Fulcrum Sample Shipment App. A log of samples leaving camp will be maintained to in Camp and Chain of custody log of receipt of samples maintained by the GroundTruth Expeditor as they are received. Samples will be inventoried and shipped to Laboratory as designated by client.

## CERTIFICATE OF ANALYSIS

WHI16000098.1

### CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-S1  
P.O. Number  
Number of Samples: 290

### SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto ON M5H 2K1  
CANADA

CC: John Nebocat  
Jodie Gibson

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	290	Dry at 60C			WHI
SS80	290	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	284	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	290	Per sample shipping charges for branch shipments			VAN

### ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CERTIFICATE OF ANALYSIS

WHI16000282.1

### CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-09-16-Soil  
P.O. Number  
Number of Samples: 320

### SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	320	Dry at 60C			WHI
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	320	Per sample shipping charges for branch shipments			VAN

### ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000283.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-09-16-Soil  
P.O. Number  
Number of Samples: 130

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	130	Dry at 60C			WHI
SS80	130	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	130	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	130	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL-03-10-2016  
P.O. Number  
Number of Samples: 161

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat

Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	161	Dry at 60C			WHI
SS80	161	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	161	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	161	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

# WHI16000370.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL2016-10-14  
P.O. Number  
Number of Samples: 290

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	290	Dry at 60C			WHI
SS80	290	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	290	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	290	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

  
JEFFREY CANNON  
Geochemistry Department Supervisor

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000401.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL2016-10-17  
P.O. Number  
Number of Samples: 161

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	161	Dry at 60C			WHI
SS80	161	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	161	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	161	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

  
JEFFREY CANNON  
Geochemistry Department Supervisor

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000444.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Soil  
P.O. Number  
Number of Samples: 32

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
Dry at 60C	32	Dry at 60C			WHI
SS80	32	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	32	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	32	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-R1  
P.O. Number  
Number of Samples: 21

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto ON M5H 2K1  
CANADA

CC: John Nebocat  
Jodie Gibson

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	21	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	21	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	21	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	21	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000349.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL-03-10-2016  
P.O. Number  
Number of Samples: 6

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	6	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	6	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
EN002	6	Environmental disposal charge-Fire assay lead waste			VAN
AQ200	6	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	6	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000418.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-10-29-2016  
P.O. Number  
Number of Samples: 22

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	22	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	22	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	22	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	22	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CERTIFICATE OF ANALYSIS

WHI16000094.1

### CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-GTP1  
P.O. Number  
Number of Samples: 139

### SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto ON M5H 2K1  
CANADA

CC: John Nebocat  
Jodie Gibson

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	139	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	139	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	139	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	139	Per sample shipping charges for branch shipments			VAN

### ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000095.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-GTP1  
P.O. Number  
Number of Samples: 138

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto ON M5H 2K1  
CANADA

CC: John Nebocat  
Jodie Gibson

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	138	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	138	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	138	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	138	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CERTIFICATE OF ANALYSIS

WHI16000096.1

### CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-GTP1  
P.O. Number  
Number of Samples: 104

### SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto ON M5H 2K1  
CANADA

CC: John Nebocat  
Jodie Gibson

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	104	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	104	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	104	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	104	Per sample shipping charges for branch shipments			VAN

### ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

WHI16000138.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-2016-07-29-Rock-GTP  
P.O. Number  
Number of Samples: 43

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto ON M5H 2K1  
CANADA

CC: John Nebocat  
Jodie Gibson

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	43	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	43	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	43	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	43	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

  
JEFFREY CANNON  
Geochemistry Department Supervisor

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

WHI16000402.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL2016-10-17  
P.O. Number  
Number of Samples: 63

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	60	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	63	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	63	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	63	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000407.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-10-26  
P.O. Number  
Number of Samples: 138

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	132	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	138	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	138	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	138	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000408.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-10-26  
P.O. Number  
Number of Samples: 138

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	132	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	137	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	137	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	137	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000409.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-10-26  
P.O. Number  
Number of Samples: 26

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	24	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	26	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	26	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	26	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000419.1

## CLIENT JOB INFORMATION

Project: BALLARAT  
Shipment ID: BAL-10-30-2016 RAB  
P.O. Number  
Number of Samples: 73

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	73	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	73	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	73	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	73	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000435.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-10-Rock  
P.O. Number  
Number of Samples: 138

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	131	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	138	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	138	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	138	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-10-Rock  
P.O. Number  
Number of Samples: 53

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	53	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	53	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	53	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	53	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000443.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 10

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	10	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	10	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	10	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	10	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000447.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 74

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	71	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	74	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	74	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	74	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000448.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 73

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	70	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	73	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	73	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	73	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000449.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 73

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	70	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	73	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	73	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	73	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000450.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 40

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	38	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	40	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	40	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	40	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000451.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 13

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	13	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	13	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	13	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	13	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000452.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 20

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	20	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	20	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	20	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	20	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

WHI16000453.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 30

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	29	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	30	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	30	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	30	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. \*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000454.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 25

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	24	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	25	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	25	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	25	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000455.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 73

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	71	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	73	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	73	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	73	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

# CERTIFICATE OF ANALYSIS

WHI16000456.1

## CLIENT JOB INFORMATION

Project: BAL  
Shipment ID: BAL2016-11-15-Rock-RAB  
P.O. Number  
Number of Samples: 62

## SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days  
DISP-RJT Dispose of Reject After 90 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Stakeholder Gold Inc.  
Suite 402 - 121 Richmond West St.  
Toronto Ontario M5H 2K1  
Canada

CC: John Nebocat  
Jodie Gibson  
Isaac Fage

## SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	59	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	62	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
AQ200	62	1:1:1 Aqua Regia digestion ICP-MS analysis	0.5	Completed	VAN
SHP01	62	Per sample shipping charges for branch shipments			VAN

## ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.  
\*\*\* asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
