

2017 YMEP Target Evaluation Assessment Report

Goldsource Property

YMEP No. 17-024

Project Location:

Dawson Mining District, Yukon Territory

NTS: 115N10

Coordinates (NAD 83)

140.683W, 63.617N

Claims: GS 1-540 YF54891-YF55430

Work performed from July 14th-19th, 2017.

Owner

Goldstrike Resources Ltd.

Report prepared on behalf of:

Goldstrike Resources Ltd.

1300-1111 West Georgia Street

Vancouver, British Columbia

Canada, V6E 4M4

Report prepared by:

Matthew Husslage

Summary

This document is written to fulfill the requirements of the Yukon Mineral Exploration Program (YMEP) grant application for an exploration program on the Goldsource Property. Goldstrike Resources Ltd staked a 100% interest in the Goldsource property during 2017. The property lies within the White Gold District, which is located within the Yukon-Tanana Terrane and is part of the Tintina Gold Province which hosts several gold and base metal deposits in the Yukon and Alaska. The property was staked based on favourable geological setting, regional aeromagnetic characteristics, local MINFILE occurrences and anomalous regional stream sediment associations.

Initial field work in July 2017 was carried out to help focus and generate targets for more detailed follow up. The work consisted of reconnaissance ridge top and spur soil sampling which obtained 404 soil samples along with 17 rock samples. The company collected numerous anomalous samples returned 21 ppb in soil, 527 ppm Zn, 269.4 ppm Pb and 266 ppm Cu.

1. Introduction

Goldstrike Resources Ltd. Staked the 100% interest in the Goldsource property. The property is in western central Yukon and is approximately 80km southwest of Dawson City, Yukon. The claims were staked based on favourable geological setting, regional aeromagnetic characteristics, local MINFILE occurrences and anomalous regional stream sediment associations. Initial field work in July 2017 was carried out to help focus and generate targets for more detailed follow up. The work consisted of reconnaissance ridge top and spur sampling which obtained 404 soil samples. 17 rock samples were also obtained by prospecting over the property for 2 days. The following sections were extracted from Mac Gearailt, et al. (2017): Location, Access, Property Geology, Property Description and History, as well as the 2017 Work Program-Survey Methodology portion.

2. Location and Access

The Goldsource Property is in the western central region of the Yukon Territory. The claims are in the Dawson Mining District and the property is approximately 80 km southwest of Dawson City, Yukon Territory (Figure 1). The property is centered at 140.683W, 63.617N (NAD 83) and is located within NTS map sheet 115N10.

There are three airstrips within 12 km of the Property, one to the west by North Ladue River and two to the south by Matson River. The Matson Creek gravel airstrip is 500 m long and suitable for small to medium fixed-wing aircraft. The nearest major road is the Top of the World Highway which is approximately 57 km north. Active placer mining at Matson Creek is served by an all-weather road that provides access to the Matson Creek Placer Mine from the Sixty Mile Creek area and the Top of the World Highway. Rough limited-use trails run from the North Ladue River airstrip to the centre of the Goldsource claims. Access to the property for the 2017 season was via helicopter from Dawson City.

3. Claim Status and Ownership

There are 540 contiguous claims within the Goldsource property totalling approximately 11,112hectares (Figures 2-5). The claims were staked in March 2017 and are owned 100% by Goldstrike Resources Ltd. The complete list of claims and their status is available in Appendix I

4. Topography, Vegetation and Climate

The Goldsource property is located in the western central portion of the Yukon Territory, Canada. The region is an area of gentle undulating relief and is unglaciated (Lowrey, G.W., 2000), and outcropping of bedrock is sparse. Elevation ranges from 550m to 1400m above sea level. The higher elevation portions of the property are thinly vegetated with stunted deciduous and evergreen trees and buck brush. Lower elevations on the property consists of a mixture of evergreen and deciduous trees and thick willows. The climate in the region is characterized by sub-arctic continental conditions. In winter the temperature average is -26°C, while the summer average temperature is 15°C.

5. History and Previous Work

There are no known historical workings or assessment reports associated with the ground in which the Goldsource Property is staked. Claims adjacent to the Goldsource Property are the Metal Creek Resources/Archer Cathro & Associates Squid claims and the Coureur des Bois Ltee Ltd. CH claims. Nearby claims include: Independence Gold's Gem claims, 500722 N.B. Lode claims.

Exploration work on the Squid claims began in the late 1970's for base metals (Heerema, 2011 and Heerema, 2012). Since that time, they have found anomalous gold-in-soil up to 178 ppb Au, strong multi-element associations Au-Ag-As-Sb-Ba-Hg, trench E4-3 Au anomaly of 6.39 g/t and drilling results at the Bored MINFILE occurrence revealed Pb-Zn-Cu-Ag-Au within quartz-muscovite-sericite schist host rock (Heerema, 2013). The Coureur des Bois CH claims overlie the Santa MINFILE occurrence consisting of polymetallic Ag-Pb-Zn±Au veins within Klondike Schist. Two assessment reports have been filed for the CH Property, but they were closed at the time of writing (Stroshein, 2011 and Heon, 2012). The Gem claims are noted for three Zn-Cu soil anomalies possibly related to volcanogenic massive sulfide type mineralization (Smith, 2010).

6. Regional Geology

The Goldsource claims are in the Dawson Range and are underlain by the Yukon-Tanana Terrane which spans part of the Yukon Territory and eastern Alaska (Colpron et al., 2016). This terrane is fault-bounded to the northeast and southwest by the right-lateral Tintina-Kaltag and Denali-Farewell fault systems and serves as the basement for Mesozoic to Cenozoic plutons and batholiths such as the Dawson Range and Cassiar Intrusive Suites. These Cretaceous intrusive rocks are spatially associated with many gold-bearing mineral deposits in this region such as the White Gold and Coffee Projects. Quartz-rich schists and gneisses (PKs) typically comprise this area because of continental margin-type deposition of sediments during the Middle Paleozoic. Regional assessment reports have mapped the area as underlain by felsic gneiss, quartz-muscovite-feldspar schist and mafic (biotite) schist (Wainwright, 2011). Figure 6 is a map of the claim block on regional geology derived from Colpron et al., 2016.

7. 2017 Exploration Program

The 2017 exploration program took place from July 14th to July 19th using a 4-person field crew. The field program was supported by helicopter stationed at a remote camp Goldstrike Resources had constructed in the vicinity for the 2017 season. The program focused on key areas associated with favourable watersheds containing Au-Cd-As (Sb) element associations found in regional stream sediment samples in conjunction with geophysical lineaments.

The rock sampling locations were chosen by geologists based on the potential source areas of MINFILE locations, placer creek occurrences and regional stream sediment Au-Cd-As (Sb) anomalies. The tops of ridges are typically chosen for the easier location of rock outcrops, subcrops, felsenmeer and float. The rock grab sample sites were chosen in the field by a prospector based on changes in lithology and/or the potential for mineralization. The rock grab samples were extracted using a rock hammer to expose fresh surfaces and to liberate a sample of approximately 0.5 kg. All sample sites were flagged with biodegradable flagging tape and marked with the sample number. All sample sites were recorded using hand-held GPS units (accuracy 1-10 m) and the following information was recorded on all-weather paper: sample ID, easting, northing, elevation, type of sample (outcrop, subcrop, float), and a brief description.

Soil samples were collected by foot with helicopter assistance at the start and end of proposed sampling lines. The soil sampling lines were chosen by geologists based on the potential source areas of MINFILE locations, placer creek occurrences and regional stream sediment anomalies. The tops of ridges are also typically chosen to allow for easier access to the desired soil horizon. The sampling locations are located at 50 m to 100 m intervals and were uploaded into a GPS prior to traverses. The final sampling sites were chosen in the field by a trained technician based on soil availability within 20 m of the proposed sample location. Soil samples were extracted using a 1.5 m Dutch Auger to collect material within the C horizon. All sample sites were flagged with biodegradable flagging tape and marked with the appropriate sample number. All sample sites were recorded using hand-held GPS units (accuracy 1-10 m) and the following information was recorded on all-weather paper: sample ID, easting, northing, elevation, sample depth (cm), horizon sampled, sample colour, sample composition in percent (organic, angular rock, gravel, sand, silt and clay), parent material, moisture content, vegetation cover and topographic position.

All the samples were collected by trained technicians, sealed and were eventually shipped to Bureau Veritas Minerals (BVM) in Vancouver, BC for analysis. All rock samples were selected by trained prospectors and photographed in situ and as a hand sample prior to sealing in a sample bag. Individual rock samples were placed in labeled plastic sample bags, sealed with a cable tie and stored on-site before transport. The soil samples were sealed within a durable labeled Kraft sample bag, sealed with flagging in the field and stored on-site to dry. On-site samples were monitored by the site geologist but not stored in a locked facility due to the remoteness of the camp location.

Groups of rock and soil samples were placed into sturdy, labeled, woven-polyethylene bags, sealed with a cable tie and stored for shipping to a secure location in Dawson City, YT or directly to a

BVM facility in Dawson City or Whitehorse, YT. All sample packaging for transport was overseen by the site geologist and documented with sample names, sample type, assay type, shipping date, shipping ID, and the number of woven-polyethylene bags. Samples at the secure facility in Dawson City were then shipped to the BVM office in Whitehorse, YT.

All samples were crushed, pulverized and the resulting sample pulps were analyzed by BVM in Vancouver, BC. The remaining coarse reject portions of the samples remain in storage at the BVM storage facility in Vancouver, BC and are scheduled for return to a secure facility in Dawson City, YT. The samples were analyzed using the BVM assay procedure AQ200, a 1:1:1 Aqua Regia digestion with an inductively-coupled plasma mass spectroscopy (ICP-MS) finish. The rock samples were also analyzed by BVM FA330-Au lead-collection fire assay fusion procedure with an inductively-coupled plasma emission spectroscopy (ICP-ES) finish.

A total of 404 soil samples were collected over the Goldsource claims mainly on ridges across the property (Figure 7). Nine (9) anomalous gold samples (greater than 10 ppb with a high of 21 ppb) are found in five separate areas. Seventeen (17) anomalous arsenic samples (greater than 20 ppm with a high of 81.3 ppm) are found across the property. Anomalous base metal values are also present: Zn (up to 527 ppm); Pb (up to 269.4 ppm) and Cu (up to 266 ppm). A weak correlation exists between anomalous Zn and Pb soils. No correlation exists between Au and base metals. Rock samples results returned mostly below detection of 2 ppb Au with the highest value at 42 ppb Au (ICP value of 50 ppb) with the Fire Assay.

8. Conclusions

From the field work conducted in 2017 by Goldstrike Resources LTD., it can be concluded that there was some success in identifying anomalous targets that warrant further investigation. A total of 404 soils and 17 rock samples were collected over 5 field days. Much of the soil samples were taken along ridge and spur lines with one sampling line cross cutting a ridge and two creeks. Many of the anomalous samples occur in the north western portion of the property and warrant further investigation.

9. Recommendations

Results from the soil sampling survey include five anomalies in the western portion of the property. 3 samples returned 21 ppb, 15.8, and 13.6 ppb on the most north western soil line and warrant further work. A more detailed grid in that area would be warranted for further work. Prospecting returned no significant values and little actual bedrock samples. Further prospecting is warranted around the north west where the highest gold soil samples returned some values. Furthermore, a detailed ground magnetic survey is warranted to provide a base data set to help with bedrock interpretation and target generation. The magnetics could also help to define felsic intrusive and alteration systems.

10. Expenditures

EXPLORATION COSTS 2017 - GS claims		
Work conducted between July 13 to July 20		
ITEM	COMPANY	AMOUNT
Helicopter-1	Ocean View Helicopters	\$ 15,157.50
Helicopter-2	Trans North Helicopter + Fuel	\$ 14,470.84
Helicopter fuel (Ocean View)	.75 drum / hr of flying - 14.1 hrs flown on project	\$ 3,172.50
Fixed wing aircraft	Great River Air	\$ 2,133.89
Field crew and sampling equipment	Druid Exploration Inc	\$ 19,136.35

13. Statement of Qualifications

I, Matthew Huslage, of 919 Dunsmuir Rd., Victoria, British Columbia, Canada, certify that: I am a graduate of Lakehead University, 2008, and hold a B.Sc. Geology degree.

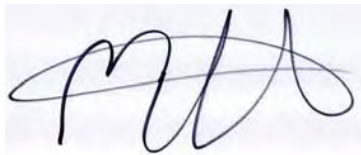

I am an independent geological consultant.

I have been employed as a geological assistant for the Geological Survey of Canada during the summer of 2007.

I have been working in the mineral exploration industry since 2008 consulting for East West Resource Corporation, HTX Minerals, Spider Resources, Sabina Gold and Silver Corporation, Harte Gold Corporation, and Wesdome Gold Mines Ltd.

The Introduction, 2017 Work Program-Results portion as well as the Conclusions and Recommendations sections were written by the author. The remainder of the report was compiled from Mac Gearailt et al. (2017).

I have no personal knowledge from the data of this certificate of any material fact or change not reflected in this report.

A handwritten signature in black ink, appearing to read 'MH', is written over a light blue rectangular background.

Matthew Huslage, B.Sc. Date: February 22, 2018

Goldsource Rock Sample Descriptions

Sample ID	User	Date	UTM Zone	Easting	Northing	Altitude (m)	Sample Material	Sample Exposure	Sample type	Description
1553455	Morgan Fraughton	14-Jul-17	7	516792.6598	7055744.684	1408.36243	rock	float	grab	Talus. On ridge. Surrounded with orthogneiss. Sample is quartz vein float with limonite on fractures and some feldspar inclusions.
1553456	Morgan Fraughton	14-Jul-17	7	516972.5565	7055494.169	1356.26965	rock	float	grab	From the bank in road cut. Quartzite? Very limonitic on fractures. Glassy quartz in contact with silicified biotite orthogneiss.
1553457	Morgan Fraughton	14-Jul-17	7	517092.2657	7055170.206	1330.23181	rock	float	grab	Talus. Quartz vein in biotite orthogneiss. Very limonitic and weathered on fractured
1553458	Morgan Fraughton	14-Jul-17	7	517618.5647	7054369.416	1335.47473	rock	float	grab	Quartz vein in biotite quartzite. Limonite alteration on fractures. Muscovite. Appears to be weathered out sulphides.
1553459	Morgan Fraughton	14-Jul-17	7	519669.001	7052237.695	1051.95203	rock	float	grab	Talus of bleached limonitic rock in contact zone between ultramafic and quartzite. Shows some characteristics of each. This sample is of the small quartz veins that can be found in some of the more limonitic, silicified rocks. Some weathered sulfides?
1553460	Morgan Fraughton	15-Jul-17	7	510640.9925	7049415.461	1188.30103	rock	float	grab	Sample taken in saddle where mag high/low meet. Sample is probably very silicified altered contact rock of the chloritic schist and some hornblende amphibolite?. Concentrated chlorite. Quartz. Limonitic on fractures. Small cross cutting dark vlenlets
1553461	Morgan Fraughton	15-Jul-17	7	509130.7178	7049337.834	1103.44006	rock	float	grab	Rusty area of exposed rock fragments. Sample is of 3 cm quartz vining that runs on foliation of chloritic schist. Looks mostly normal other than the small cubic pyrite blebs
1553462	Morgan Fraughton	15-Jul-17	7	508637.2486	7048936.443	1056.15015	rock	float	grab	Quartz vining in chlorite muscovite schist. Very limonitic. No visible sulphides. Weathered. Manganese staining.
1553464	Morgan Fraughton	16-Jul-17	7	519233.2844	7046891.078	1050.93225	rock	float	grab	Sample is quartz vein float with much limonite, manganese staining, and partially weathered out pyrite blebs. Found in road cut. Hosted in chloritic schist that have been altered to muscovite, silicified, sericite, limonite schists.
1553465	Morgan Fraughton	16-Jul-17	7	519636.1864	7047418.584	909.674927	rock	float	grab	Quartz with weathered out pyrite and much limonite. In muscovite and limonite altered
1553466	Morgan Fraughton	16-Jul-17	7	517128.3465	7053245.363	1213.55676	rock	subcrop	grab	5 cm quartz vining running on foliation of silicified muscovite limonite altered biotite
1553467	Morgan Fraughton	16-Jul-17	7	517151.4419	7053023.317	1206.09521	rock	float	grab	Quartz vein float in silicified Limonite and muscovite altered biotite gneiss (Schist?) Some small cubic pyrite (or hematite?) Along very red limonitic fractures in vein. Quartz is part of what is probably a stock work over a large 20 m plus zone of silic
1553468	Morgan Fraughton	16-Jul-17	7	517117.4961	7053017.817	1218.31677	rock	float	grab	Quartz with orange and red (hematite?) limonite on fractures. Surrounded by silicified limonitic muscovite quartz Augen biotite schist? (gneiss?) Specular hematite?
1553469	Morgan Fraughton	16-Jul-17	7	517123.2857	7053009.4	1222.31104	rock	subcrop	grab	Quartz vein. Red and orange Limonite. Pyrite and hematite. Taken from many quartz boulders in 3 m radius.
1553470	Morgan Fraughton	16-Jul-17	7	517134.4164	7053007.668	1211.26611	rock	subcrop	grab	Quartz. Limonite. Muscovite. Cubic pyrite on fractures.
1553471	Morgan Fraughton	16-Jul-17	7	517133.5027	7053018.353	1209.2196	rock	subcrop	grab	Broke apart tire sized quartz vining sitting on to of Moss. Very weathered throughout. Very orange limonitic throughout. <1% pyrite. Quartz vein/stockwork here is significant. Up to 30 meters across and striking approx 20 degrees true North in
1553472	Morgan Fraughton	16-Jul-17	7	517623.7402	7052014.406	1103.87732	rock	subcrop	grab	Quartz vining in very limonitic and silicified biotite to muscovite Schist? Gneiss? On mag high/low border.
1553473	Morgan Fraughton	16-Jul-17	7	509268.4006	7050749.333	1152.21069	rock	subcrop	grab	Quartz with limonite and weathered out pyrite cubes on fractures. Host rock seems to be a limonitic silicified feldspar quartz augen muscovite Schist?
1553956	Raph Chevailier	18-Jul-17	7	502220.0238	7054123.918	733.61	rock	float	grab	approx coordinates, sampled on airstrip, no flagging for sample, blocky vitreous quartz vein float with minor oxidation along fractures planes, muscovite schist host?

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CERTIFICATE OF ANALYSIS

WHI17000381.1

CLIENT JOB INFORMATION

Project: GS
Shipment ID: GS-2017-SOIL_2
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

STOR-PLP Store After 90 days Invoice for Storage
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Goldstrike Resources Ltd.
1300 - 1111 West Georgia Street
Vancouver British Columbia V6E 4M3

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. *** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted. *** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
