Certificate of Qualifications

I, Mark Fekete, having my place of residence at 178 Dennison Boulevard in Val d'Or in the Province of Quebec do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from the University of British Columbia in 1986, I have been engaged as a Geologist continuously since 1986 and I am a Member in good standing of the Order of Geologists of Quebec (OGQ #553) and the Association of Professional Engineers and Geoscientists of British Columbia (APEGBC #31440), and I am a "qualified person" as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the McQ property most recently in July 2017;
3. I co-wrote and I am, as the senior author and qualified person, responsible for the contents of this technical report entitled "Memorandum Report of 2017 Surface Work on the McQ Property in the Mayo Mining District, Yukon, NTS Sheet 115P16 (Seattle Creek), 63°50'N. Lat., 136°10'W. Long.," based on my professional experience, a review of relevant reports and maps made available to me from government and corporate sources and my participation in the work programs described in the report;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I am an Officer and Director, and I beneficially hold a number of shares in Taku Gold Corp.;
6. I hold no direct interest in the McQ property as a result of my prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101 and according to Form 43-101F1.

Respectfully submitted this 3rd day of December 2017,

(s) "**Mark Fekete**"

Mark Fekete, P.Geo.

Certificate of Qualifications

I, Marty Huber, having my place of residence at 16 Flax Mill Dr. in Conestogo in the Province of Ontario do hereby certify that:

1. I obtained a Bachelor of Science Degree in Geology from Acadia University in May 2011, I have been engaged as a geologist continuously since 2011, I am a Member in good standing with the Association of Professional Geoscientists of Nova Scotia (APGNS #232), and I am a “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101;
2. I have visited the McQ property on numerous occasions including most recently in July 2017;
3. I co-wrote this technical report “Memorandum Report of 2017 Surface Work on the McQ Property in the Mayo Mining District, Yukon, NTS Sheet 115P16 (Seattle Creek), 63°50’N. Lat., 136°10’W. Long.,” under the supervision of Mark Fekete, P.Ge.;
4. I am not aware of any material fact or material change with respect to the subject matter of the report that is not disclosed in the report which, by its omission, makes the report misleading;
5. I do beneficially hold a number of shares in Taku Gold Corp.;
6. I hold no direct interest in the McQ property as a result of any prior involvement with the property; and
7. I have read, and this report has not been prepared for the purposes, nor in full compliance with, National Instrument 43-101 and according to Form 43-101F1.

Respectfully submitted this 3rd day of December 2017,

(s) “*Marty Huber*”

Marty Huber, P.Ge.

Introduction and Terms of Reference

Breakaway Exploration Management Inc. (“Breakaway”) was engaged by Taku Gold Corp. (“Taku”) to manage and report on a reconnaissance type ridge and spur soil geochemical survey done on the McQ property (“McQ” or the “Property”) in Yukon in 2017. The goal of the surface work was to identify anomalous gold trends that may lead to the discovery of gold bearing structures. This memorandum report was prepared to complete statutory assessment work filings as required under the Yukon Quartz Mining Act. It is not intended and does not fully comply with National Instrument 43-101. The program was funded in part by Yukon Mining Exploration Program (“YMEP”) Focused Regional Grant No. 17-041. The work done followed closely to the proposed YMEP plan with a few changes to the ridges covered by the survey.

Location

McQ is located approximately 35 kilometers northwest of Mayo and directly north of Golden Predator Mining Corp.’s Gold Dome property (Figure 1). The approximate center of the Property is described by 63°50’ North Latitude and 136°10’ West Longitude and appears on NTS Sheet 115P16 (Seattle Creek). The 2017 program included work on the original MQ 1 to 98 claims, and on un-staked crown land adjacent to the original claims. Subsequent to the work, an additional 100 claims were staked bringing the total area of the present Property to 198 un-surveyed mineral enclosing approximately 3,780 hectares within the Mayo Mining Division (Figure 2) more fully described in Table 1 below.

Table 1 - List of Claims

Claim Name No.	Tag No.	Expiry Date	#
MQ 1 to 98	YF49701 to YF49798	3-Aug-19	98
MQ 99 to 198	YF09209 to YF09308	27-Jul-18	100

The Property is located in an isolated part of Yukon with relatively few local resources or infrastructure. Several secondary roads exist throughout the region providing access to placer mines and other hard rock exploration camps in the area. Generally, access to the Property is by helicopter from the town of Mayo. A seasonal road leading to a placer mining operation does pass through the eastern part of the Property. The Authors have not been on this road and cannot comment on its condition. The best season for exploration is during the summer months from mid-May to mid-October.

Previous Work

Table 1 below lists all known assessment reports that describe work done adjacent to and within the boundaries of the Property.

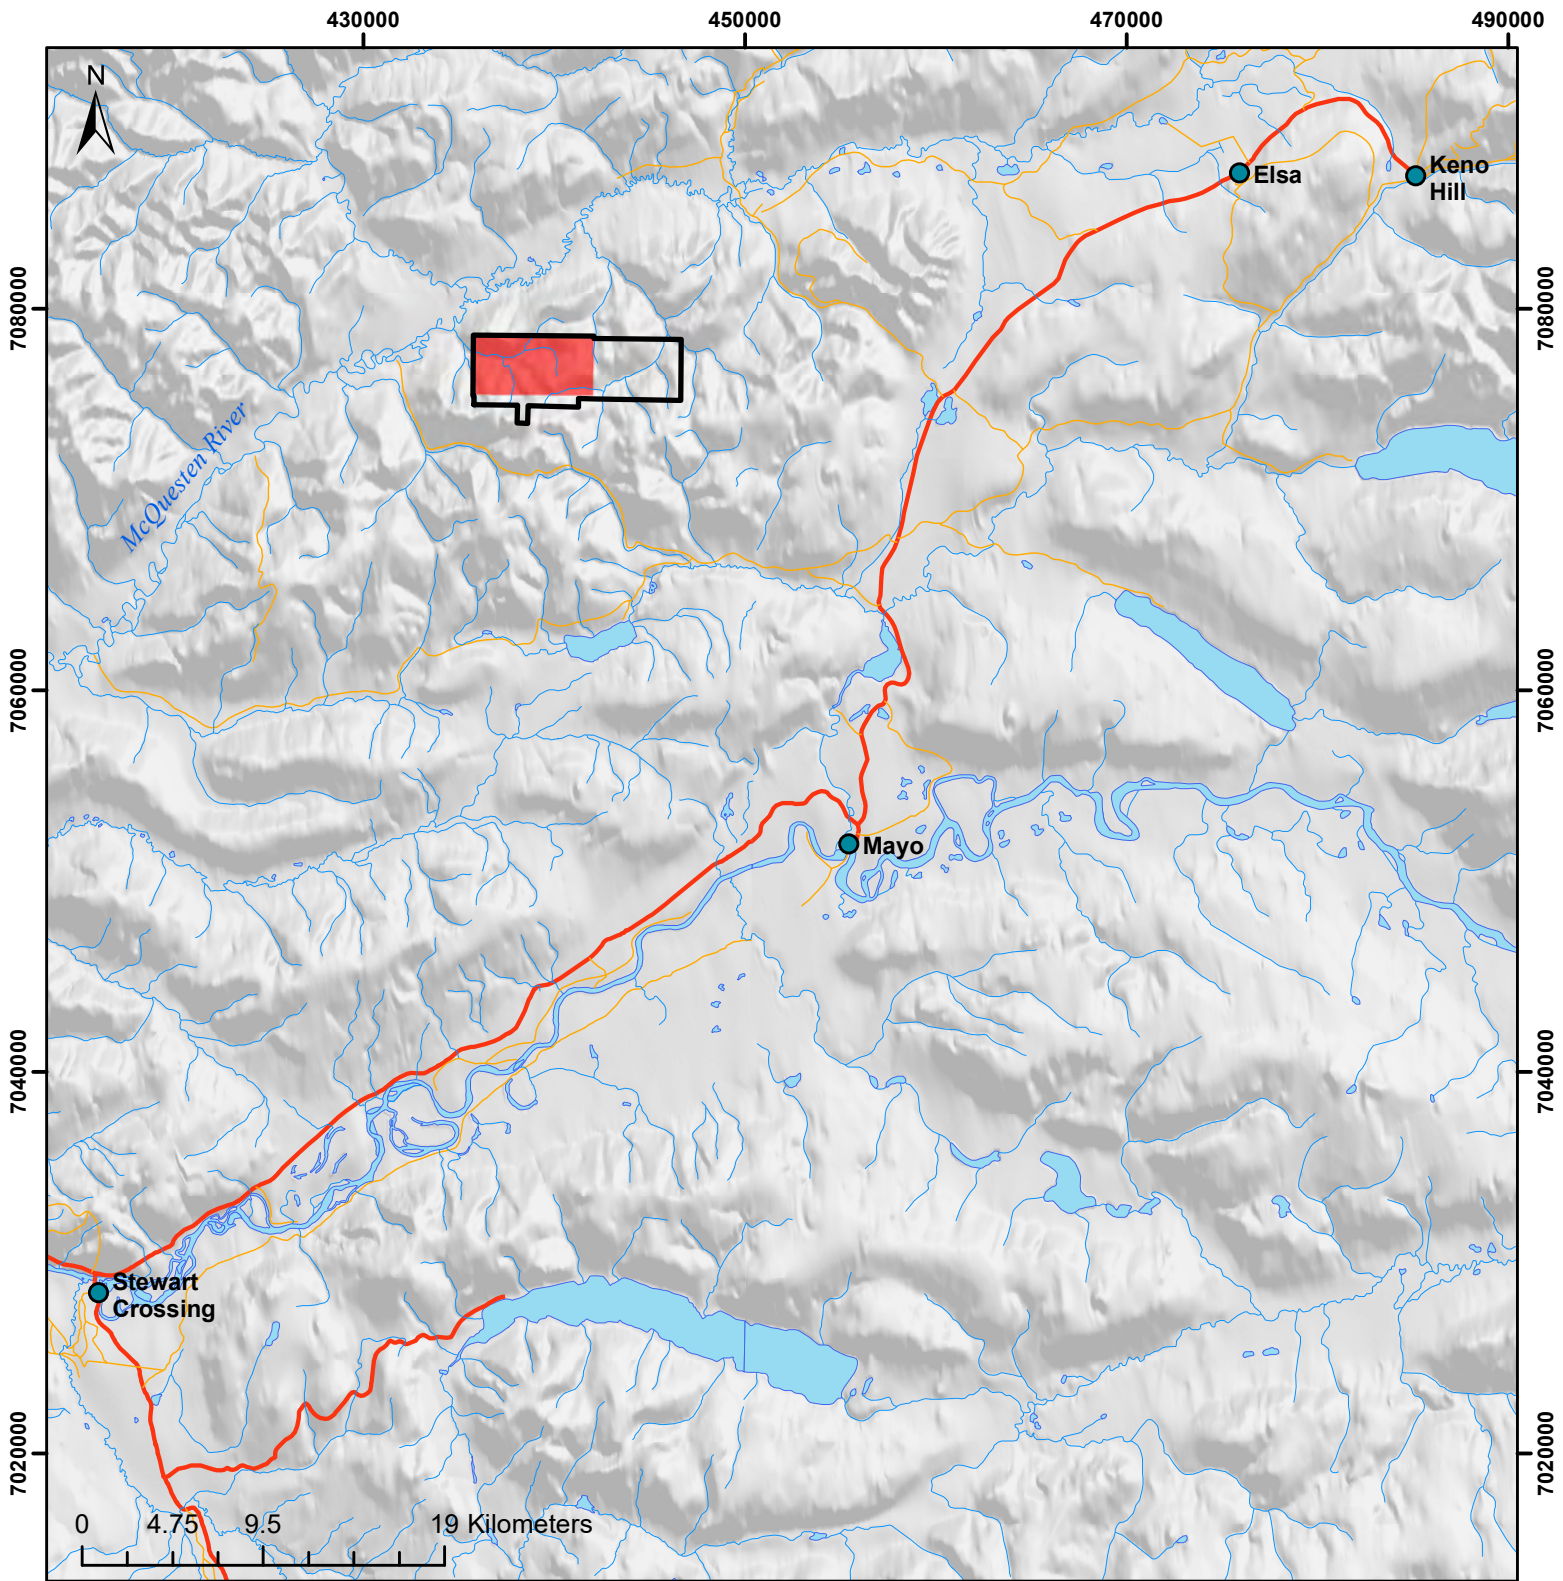

Table 2 - Previous Assessment Work Files

Company	Year	AFR No.	Author	Work	Link

Scheelite Dome (recently renamed “Gold Dome”), directly south of the Property, is the most significant gold occurrence in the area. The following pertinent information has been modified from Golden Predator Corp.’s Gold Dome summary found at: <http://www.goldenpredator.com/Gold-Dome.html>

Exploration at Gold Dome dates back to the discovery of placer gold in 1903 on Hight Creek. Following the discovery of the Fort Knox deposit near Fairbanks, Alaska in the late 1980s, the property was explored for a similar intrusion-hosted gold deposit. Between 1994 and 1997, Kennecott Canada Exploration Inc. conducted a series of field programs that included geological mapping, prospecting, stream sediment and soil geochemical sampling, trenching, airborne geophysics, and core and RC drilling (8 diamond holes totaling 1,035m and 13 RC holes totaling 1,052m). In 1998, La Teko Resources Ltd. completed an Induced Polarisation (“IP”) survey, further soil sampling, and a core drilling program (7 holes totaling 1,268m). In 1999, Copper Ridge Explorations Inc. (“Copper Ridge Explorations”) completed geological studies, a ground magnetic survey and core drilling (13 holes totaling 1,358m). In 2003, the property was optioned to Golden Patriot Mining Inc., who carried out an IP survey and a 310m, five-hole drilling program focused on the Tom Zone. Golden Patriot subsequently terminated its option. Highlights of drilling conducted during the period 1998 to 2003 include 6.4m @ 7.09gpt Au including 1.7m @ 24.4gpt Au (SH03-30); 7.7m @ 3.67gpt Au (SH98-12); 4.5m @ 3.66gpt Au (SH99-23); and 5.9m @ 2.41gpt Au (SH99-24).

During the 2006 field season, Copper Ridge Explorations Inc. carried out a program of line cutting, soil sampling and geophysical surveying over the newly defined Toby Zone. The work defined a 2x1 km area of anomalous coincident bismuth, arsenic, gold and antimony soil geochemistry, located two km south of the Tom Zone. The geophysical program included IP, magnetic and VLF-EM ground surveys over 21km of grid. This work was followed by road building and 1,430m of mechanical trenching. The trenching program focused on the southeast part of the Toby Zone where the soil anomaly is coincident with a moderate IP chargeability anomaly. The trenching exposed large areas of intense alteration in the metasediments surrounding discrete one to three metre wide zones of quartz-arsenopyrite-bismuthite veining. A total of 622 grab and chip-channel samples were collected from the trenches. Highlights included 4.2gpt Au over 2.0m from trench 06-2 and 8.1gpt Au over 1.0m in continuous chip samples from trench 06-3.

In 2007, Riverside Resources Ltd. optioned the property and completed a five-hole, 600m diamond drill program targeting bulk tonnage gold potential along the Aorta structure. Results of this program included several ten-metre intervals of >1.0gpt Au, including 10.18m of 2.03gpt Au and 0.25m of 22.70gpt Au (SD07-34) and 10.10m of 2.21gpt Au (SD097-37). Historic drill holes into the Aorta structural corridor returned similarly long intervals of gold mineralization including 54.9m of 0.45gpt Au (RC97-11); 43.4m of 0.56gpt Au (SH98-10); 20.3m of 1.03gpt Au (SH99-23); 8.9m of 1.81gpt Au (SH99-24); and 15.8m of 1.88gpt Au (SH98-12). The combined results demonstrate continuity of low-grade, near-surface gold mineralization along the Aorta structural corridor.

In 2012 Breakaway collected 551 reconnaissance ridge and spur, deep-auger-type soil samples on open crown land north of the Gold Dome property (Fekete and Huber 2012). Excellent gold-in-soil values up to a maximum of 259 part per billion gold (“ppb Au”) and coincident anomalous arsenic and silver values were obtained from a ridge in the southeast part of the Project Area as well as silver values up to 3.5 grams per tonne silver (“gpt Ag”) on a ridge in the northern part of the Project Area. In 2013 a small grid of 32 samples was done over the gold cluster and clearly defined a gold trend over a distance of 400 metres (Fekete and Huber, 2013).

Geology and Deposit Models

The following geological description is derived from regional compilation maps by Gordey and Makepeace (2000) and descriptions by Héon (2007) and Hart (2002). Murphy (1997) provides a detailed discussion on the geology of the McQueston River and Roots (1997) describes the adjacent Mayo area in detail.

Regionally, the McQueston River area lies northwest of the Tintina Fault within the western part of the Upper Proterozoic to Mississippian Selwyn Basin (Figure 3). The Selwyn Basin is disrupted by folding

and faulting, and is divided into three tectonic sheets by the Dawson, Tombstone, and Robert Service thrusts. These tectonic sheets were subsequently intruded by the northwest trending Mid-Cretaceous Tombstone Suite and the Late Cretaceous McQueston Suite. Together these intrusive suites are commonly referred to as the Tombstone Belt.

Locally the Property (Figure 4) lies directly above the Robert Service Thrust and is underlain by Upper Proterozoic to Lower Cambrian Hyland Group schists and phyllites (PCH). These rocks are thrust above and unconformably overlay Mississippian Keno Hill Quartzite (MK) and Upper Devonian to Mississippian Earn Group (DME) phyllites, quartzites and chert pebble conglomerates. Murphy and Héon (1995) further divide the Hyland Group into the Narchilla and Yusezyu formations and indicate that the Property is underlain by Yusezyu Formation rocks highly deformed by the Tombstone Strain Zone.

The Tombstone Strain zone is several kilometres thick and extends from the upper part of the Tombstone Thrust sheet up into the lower part of the Robert Service Thrust sheet. Rocks within the zone display textures including lineations, boudinage and isoclinal folding that indicate higher metamorphic grade than rocks outside the zone. In the Yusezyu Formation this is demonstrated by strongly foliated and lineated muscovite-chlorite phyllites and in the Keno Hill Quartzite by coarsely foliated and lineated quartzite. The Yusezyu Formation is episodically intruded by the mid-Cretaceous Tombstone Suite (mKS).

The project area is bounded to the north by thick Quaternary deposits in the McQueston River valley.

The Property lies in an underexplored part of the loosely defined Tintina Gold Belt. This metallurgical province has past production of 29.9 million ounces and 39.3 million ounces of resources for total gold resources of 69.2 million ounces. Notable gold deposits are Donlin Creek, Ft. Knox, Pogo, Brewery Creek and Dublin Gulch.

Murphy (1997) notes the McQueston River region has a long history of mining and mineral exploration with many known mineral showings and the potential for new discoveries. He categorizes deposit types as:

- a) Syngeneic stratabound barite mineralization in the Earn Group;
- b) magmatic hydrothermal veins, skarn replacement, country-rock-hosted veins, breccias and structurally controlled alteration zones; and Elsa-Keno Hill vein-faults thought to be genetically associated to Tombstone intrusions;
- c) skarns, breccias and veins thought to be genetically associated with McQueston intrusions; and
- d) breccias of unknown age and association.

(Hart, 2005) proposes a new deposit type for the area characterized by gold only mineralization genetically related to cooling felsic intrusions known as reduced Intrusion-Related Gold System or “reduced IRGS-type” Reduced IRGS-type deposits are large, low-grade systems that are more amenable to detailed, widespread geochemical surveys rather than focused prospecting and sampling of easily identifiable quartz veins. Detailed geochemical surveys have proven to be effective for exploring this type of deposit model in the adjacent Dawson Range area.

2017 Exploration Work

The 2017 exploration program was completed from July 18 to July 21 by a four-man crew with helicopter set-outs from Mayo approximately 35 kilometres from the work area. The analytical work was done from July 26 to August 28, 2017 by Bureau Veritas Commodities Canada Ltd. (“BV”). Planning was done by geologist Mark Fekete (the “Senior Author”) and geologist Marty Huber (the “Junior Author”). The Junior Author managed the day-to-day logistics and compiled the field and analytical data into digital maps and tables up to December 3, 2017. A complete YMEP Final Submission Form is included herein as Appendix A. A detailed “Statement of Work” is included herein as Appendix B.

Geochemical Sampling Methods and Analysis

The work consisted of reconnaissance ridge and spur soil geochemical sampling over and adjacent to the McQ property. A total of 538 samples were collected with hand augers at 50 metre sample intervals on predetermined ridge and spur lines. A total of 298 samples were collected on the original MQ 1 to 98 claims. The remaining 240 samples were collected on un-staked crown land. Accordingly only the amount spent on the MQ 1 to 98 claims was counted for assessment work purposes on a prorated per sample basis (Appendix B).

All samples locations were recorded with HP iPAQ 200 series field computers running GeoInfoMobile™ and Tierra Mapper™ software paired with Holux GPS receivers in map datum UTM WGS84 Zone 8N. Sample locations (Figure 5) and descriptions are included as Appendix C. Soil samples were placed in Kraft-type paper bags affixed with water resistant barcode stickers containing the appropriate numbers and were also marked with indelible ink. Batches of samples were subsequently dried, sealed in rice bags and shipped to BV in Vancouver, B.C. for analysis. Samples were dried and sieved to -80 mesh size and analyzed for 36 elements (including gold) by 15 gram (g) Aqua Regia digestion, ICP-MS finish (Appendix D). BV is accredited under ISO 9001.

It is the Authors’ opinion that the sampling procedures, security measures, sample preparations and analytical methods applied to the soil, rock and core samples were diligently followed and are adequate to meet industry standards commonly accepted or this level of exploration. The Authors have relied upon the adequacy and accuracy of the analytical results provided by BV. Independent verification of those results has not been undertaken. The Junior Author reconciled the field data with the analytical results and found one irregularity sample 200307 was recorded in field but was not received at the lab, this sample was subsequently removed from the database.

Results

Excellent gold values were obtained from three zones during the 2017 work program with values ranging from below detection up to 111ppb Au (Figure 6). The first zone or “Zone 1” (Figure 7) extended the geochemical anomaly identified in 2012 and 2013 up to 1.6km long to the southwest with samples returning gold and arsenic values of 111ppb Au (200138), 108ppb Au and 533ppm As (200133) and 68 ppb Au and 288ppm As (200123)

“Zone 2”, located on the west side of the Property (Figure 8), contained two adjacent samples with values of 42ppb Au (200626) and 21ppb Au (200625). “Zone 3”, located in the northeast corner of the newly staked ground (Figure 9), returned four anomalous values ranging from 31 ppb Au (200702) to 56ppb Au (200697), and extends 600 m in a northwesterly direction (Figure 9). Strong arsenic values were also obtained in this zone with values of 216ppm As (200699) and 106ppm As (200697). A small cluster of three samples on one ridge approximately 600 metres to the west contains several anomalous gold and arsenic with values up to 26ppb Au and 190ppm As (200291).

Recommendations

It is recommended that detailed grid soil geochemical sampling continue over the three zones identified from the 2017 results (Figure 10). This will include roughly 800 samples over three grids with lines spaced 100 metres apart at 50 metre sample intervals. The first grid over Zone 1 would consist of 400 samples over a 1x2 kilometre grid to cover the 1.6 kilometre long Zone 1 soil anomaly. The second grid would consist

of 200 samples over a 1x1 kilometre area to evaluate the extent of Zone 2. The third grid over would include 200 samples over a 1x1 kilometre area to evaluate the two clusters of anomalous gold and arsenic values that make up Zone 3 in the eastern portion of the Property. This work will involve four soil samplers over a 7 day period (including 2 days mobilization) for a total of 28 man days. Since there will be room in the helicopter, it is recommended that a prospector go in with the sampling crew to prospect and collect rock samples. The crew will be flown from Mayo to the Property on a daily basis. The crew will be mobilized in and out of Mayo from either Whitehorse or Dawson by truck. The total estimated cost of the proposed work program is outlined in the Table 5 below.

Table 4 - Estimated Budget 2018

Activity	Contractor	Rate		Cost	
Daily Living Expense	Breakaway	35	man days @	\$150	\$5,250
Truck. fuel	Breakaway	7	days @	\$250	\$1,750
Helicopter (Bell 206L)	Frontier	10	hours @	\$1,500	\$15,000
Assay costs – soils	BV	800	samples @	\$25	\$20,000
Assay costs - rocks	BV	25	samples @	\$40	\$1,000
Soil Samplers (Technicians)	Breakaway	28	man days @	\$300	\$8,400
Prospector	Breakaway	7	man days @	\$350	\$2,450
Report	Breakaway	1	report @	\$2,500	\$2,500
Total					\$56,350
Contingency ~ 10%					\$5,635
Grand Total					\$61,985

PROJECT SUMMARY															
Total project expenditures:	\$59,600.49														
Number of new claims since March 31 st :	100														
Has an option resulted since March 31 st ?	<input type="checkbox"/> yes	<input checked="" type="checkbox"/> no	<input type="checkbox"/> in negotiation												
Number of calendar field days:	4														
Number of person-days of employment:	25	paid	_____ days of unpaid work												
Total no. of samples:	nil	rocks	nil silts 538 soils nil other												
Total length/volume of trenching/shafting:	nil														
Total number of line-km of geophysics:	nil														
Total metres drilled:	nil	diamond drill	nil RC drill nil auger/percussion drill												
Other products (provide details):															
<i>This is not an expense claim form. To request reimbursement of expenses, please submit a separate detailed expense claim form.</i>															
FINANCIAL SUMMARY															
Total daily field allowance:	\$2,500.00	Total contractor costs:	nil												
Total field air transportation costs (helicopter/plane):	\$11,643.75	Total excavating/heavy equipment costs:	nil												
Total truck/mileage costs:	\$2,204.10	Total assay/analyses costs:	\$12,234.12												
Total wages paid:	\$8,100.00	Total reclamation costs:	nil												
Total light equipment rental costs:	nil	Total report writing cost:	nil												
Other (please specify):	nil	Total staking costs:	\$22,918.52												
Other (please specify):	nil														

YMEP Final Submission Form

Your feedback on any aspect of the program:

The Department of Energy, Mines and Resources may verify all statements related to, and made on this form, in any previously submitted reports, interim claims and in the Summary or Technical Report which accompanies it.

I certify that;

1. I am the person, or the representative of the company or partnership, named in the Application for Funding and in the Contribution Agreement under the Yukon Mineral Exploration Program.
2. I am a person who is nineteen years of age or older, and I have complied with all the requirements of the said program.
3. I hereby apply for the final payment of a contribution under the Yukon Mineral Exploration Program (YMEP) and declare the information contained within the Summary or Technical Report and this form to be true and accurate.

Date December 3, 2017

Appendix B - Statement of Work Forms

APPLICATION FOR A CERTIFICATE OF WORK

I, MARTIN J. HUBER (AGENT FOR TAKU GOLD CORP.) ,

of 1740 CHEMIN SULLIVAN, SUITE 1100 VAL-D'OR, QUEBEC J9P 7H1
Phone 819 354-5244
Client I.D. Number: _____
make oath and say that:

Office Date Stamp

- 1. I am the owner, or agent of the owner, of the mineral claim(s) to which reference is made herein.
- 2. I have done, or caused to be done, work, on the following mineral claim(s): (Here list claims on which work was actually done by number and name)

SEE ATTACHED SCHEDULE OF CLAIMS

situated at AREA JUST NORTH OF SCHEELITE DOME Claim sheet No. 115P16

in the MAYO Mining District, to the value of at least \$23,034.47 dollars,

since the 4TH day of AUGUST 2016 ,

to represent the following mineral claims under the authority of Grouping Certificate No. PENDING .
(Here list claims to be renewed in numerical order, by grant number and claim name, showing renewal period requested).

- 3. The following is a detailed statement of such work: (Set out full particulars of the work done indicating dates work commenced and ended in the twelve months in which such work is required to be done as shown by Section 56).

Data compilation & planning June 8-9, 2017
Travel Whitehorse to Mayo (4 techs) & Dawson to Mayo (2 Geologists) July 16, 2017
Soil sampling on McQ property (298 samples) & adjacent unstaked area (240 samples) July 18-21
\$23,034.47 spent on McQ property

Sworn before me at DAWSON CITY this _____ day of AUGUST 2017 .

Submitted By: Email Distribution List
Receiving Lab: Canada-Whitehorse
Received: July 26, 2017
Report Date: August 28, 2017
Page: 1 of 12

CERTIFICATE OF ANALYSIS

WHI17000371.1

CLIENT JOB INFORMATION

Project: McQ
Shipment ID:
P.O. Number
Number of Samples: 320

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Taku Gold Corp.
Suite 608 - 409 Granville St.
Vancouver British Columbia V6C 1T2

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
DY060	320	Dry at 60C			WHI
SS80	320	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	320	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	320	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CLIENT JOB INFORMATION

Project: McQ
Shipment ID:
P.O. Number
Number of Samples: 218

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT-SOIL Immediate Disposal of Soil Reject

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Taku Gold Corp.
Suite 608 - 409 Granville St.
Vancouver British Columbia V6C 1T2
Canada

CC:

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
DY060	218	Dry at 60C			WHI
SS80	218	Dry at 60C sieve 100g to -80 mesh			WHI
AQ201	218	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	218	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.

CLIENT JOB INFORMATION

Project: Mayo Regional
Shipment ID:
P.O. Number
Number of Samples: 3

SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days
DISP-RJT Dispose of Reject After 60 days

Bureau Veritas does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Taku Gold Corp.
Suite 608 - 409 Granville St.
Vancouver British Columbia V6C 1T2
Canada

CC:

SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
PRP70-250	3	Crush, split and pulverize 250 g rock to 200 mesh			WHI
FA430	3	Lead Collection Fire - Assay Fusion - AAS Finish	30	Completed	VAN
EN002	3	Environmental disposal charge-Fire assay lead waste			VAN
AQ201	3	1:1:1 Aqua Regia digestion ICP-MS analysis	15	Completed	VAN
SHP01	3	Per sample shipping charges for branch shipments			VAN

ADDITIONAL COMMENTS

This report supersedes all previous preliminary and final reports with this file number dated prior to the date on this certificate. Signature indicates final approval; preliminary reports are unsigned and should be used for reference only. All results are considered the confidential property of the client. Bureau Veritas assumes the liabilities for actual cost of analysis only. Results apply to samples as submitted.
*** asterisk indicates that an analytical result could not be provided due to unusually high levels of interference from other elements.
