

Pelly Property 2020YMEP Program: Traverse logs

Traverse Date	Geologist	Traverse Summary
2020-08-22	R. Burke and R. Black	Sunny with scattered clouds and the start of the day and ended with rain. Introduction day at the Fisher zone. Started traverse at top of hill at the southeast portion of the work area. Traverse along the exhalite units on the southwest facing slope towards Viking Creek. Collected samples of volcanic and exhalite unit in the area. Prospected a soil anomaly that was coincidental with structure interpreted from magnetic data. Picked up on an elevated ridge in the Argillites at the base of the main Fisher plateau.
2020-08-23	R. Burke and R. Black	Sunny with scattered showers. Dropped off at the of the plateau near Viking Creek. Continued prospecting and sampling exhalite unit and volcanic units around them working our way to the Fisher Porphyry. Ended the day near the Porphyry and historic mineralized zone.
2020-08-24	R. Burke and R. Black	Dropped off at the Fisher Porphyry. Prospected along the plateau to the northwest. Inspected a coincidental soil and VTEM anomalies at the Badger prospect where we were picked up at the end of the day.
